Preface.

The manuscript of this volume has been for the most part in the hands of the publisher since the Summer of 1913. The unavoidable delays, due to the interchange of proofs, and the European war, have belated its appearance. Meanwhile, new Sumerian material, such as Père Scheil's, Les Plus Anciennes Dynasties Connues de Sumer-Accad; Clay's list of the Kings of Isin in the Yale Babylonian Collection; Poebel's Historical and Grammatical Texts from Nippur in the University of Pennsylvania, and works of the highest importance, such as Delitzsch's Sumerian Grammar and Glossary, Barton's Babylonian Writing, Legrain's Le Temps des Rois D'Ur, Hroznýs Getreide im Alten Babylonien, have appeared.

It was inevitable that these should, in some degree, modify and, in a few instances, change the views of the author while the various sections of this work were going through the press, and this will account for any inconsistencies that may exist between the translations and the lists and indices, as an interval of more than a year elapsed between the time when the former and the latter were through the press.

An important modification must here be made. It seems clear from Poebel's Historical Texts that there were several dynasties of Ur, and it is evident that the one to which our texts belong was the last. It was still possible, when this became clear, to designate which dynasty is referred to but, as the original title, Ur Dynasty Tablets, occured in some parts of the book already through the press, it was deemed best not to do so. However, Ur Dynasty Tablets is broad enough to cover the whole field.

An effort has been made in this book to set forth and arrange the letter press so as to be helpful for beginners and those who are self-taught. For this reason special attention has been paid to the numerical system by adding an Arithmetical Index and an Index of Values for the sign list, while the Index of Words and Phrases, originally of very modest size, has been enlarged so as to cover the whole material of the texts, in the hope that this will add to the interest and usefulness of the work.

As for the system of transliteration, it has not been deemed advisable to take account of the so called amissible and inamissible consonants.

To his fellow workers in the field of Sumerian research, the author would say that he owes each and every one of them a debt of gratitude for help given by their published works, the names of which will be found in the list of abbreviations.

No one can be more alive to the shortcomings of this publication than the author himself, and criticism that will shed further light on the language and transactions of the last dynasty of Ur, will be welcomed.

Introduction.

The one hundred and eighty autograph texts, from Babylonian tablets of the Ur Dynasty, published in this volume form part of my private collection. Eighty two of them were acquired in Bagdad in 1904 and doubtless were the results of Arabic digging after the close of the French excavations at Tello. The remaining 108 were purchased more recently; 106 in 1911 from a Paris dealer and two in 1913 in New York. Those acquired in 1911 are all from Drehem. They correspond to tablets published recently by Thureau-Dangin, Genouillac, Langdon and others as from that place. The two purchased in 1913 are probably from Jokha. Internal evidence and correspondence to collections already published make the sources of these practically certain, though they were not excavated by responsible people. Those from Tello, 1 to 90, together with 162 A and 167 A, but excluding Nos. 30, 31, 33 A, 37 A, 44 and 45 which are from Drehem, also 70 A and 73 A from Jokha, correspond to texts published by Reisner, Thureau-Dangin, Radau, Lau, Barton, Pinches and others. The remainder, except the two from Jokha, are to be classed with Nippur texts of the Ur period, to which they closely correspond.

The texts have, so far as possible, been grouped according to their nature and contents, though it was thought desirable not to follow this arrangement with the "case tablets", No 2 to 31, but to keep these together. As may be seen from the catalogue and translations, twenty of them refer to grain transactions, two to sheep and one each to cattle, oil, wool, bread, pitch, pottery, employment of men and contracts for loans of money and grain.

Contract tablets are 30, 31, 32, 33, 33 A and 180.

Label tablets are 35, 36 and 176.

Receipts are represented by 50 or more examples.

Wool and woolen cloth are the subjects of Nos. 12, 42, 43, 44, 45 and 170. 42 is a record of taxes levied and 170 is an unusual memorandum. No. 41 concerns the assignment of people to various duties, possibly in a single temple compound.

Under the head of memorandum I have included all those records of transactions written on small tablets, which were later to be transferred to ledger accounts, made monthly or bi-monthly, and sometimes even for one or two years. Thirty or more of the texts contain such items while Nos 68 and 91 are ledger accounts.

Thirty three tablets concern grain as cargoes, consignments, harvests, seedgrain, loans, payments, wages and food for man and beast.

Nos 54 to 61 are dues and wage lists, the payments of 57 being in silver to temple singers. In this, as well as in Nos 41 and 58, an unusual number of temple names, some of which are new, occur.

No 59 is an erased tablet. The colophon, however, is not erased. So far as possible the inscription and the lines of erasure, which are deep, are accurately re-

produced; a work of no small difficulty owing to distortion of the signs by the lines of erasure. Pinches has reproduced a similar tablet in the Amherst collection, No 64.

Especial attention is called to No 60, a temple list, not because of anything unusual in the tablet or its inscription, an account of which will be found among the translations, but because it is one of four almost identical tablets written within a few days of each other.

Allowances to envoys and their attendants, officials and others will be found in tablets 81 to 90.

Animals occur in comparatively few Tello tablets of this collection namely; Nos 9, 14, 18, 42, 43, 44, 52, 53, 55 and 69 to 80 except 70 A and 73 A. On the other hand, among the Drehem tablets, we find very little besides animals, so that, were it not for the names, places, dates and verbal forms found in them, they would have little value. Only ten; Nos 30, 31, 33 A, 37 A, 44, 45, 132, 175, 179 and 180 deal with other subjects. Nevertheless some of these animal tablets, that evidently form the records of a great stock yard or cattle market near Nippur, are of unusual interest. No 96 contains an important chronological problem, No 97 has repeated references to officials known as *Ragab me*; No 100 is, in part, a record of payments to officers and soldiers of Ibisin during the last days of his father Gimilsin.

No 123,[8.9] mentions a leopard and dogs and 142 a leopard and probably camels. 171 is an item of sheep and goats killed as food for temple dogs.

160, 167, 168 and 169 were impressed with seals that belonged to royal scribes of the time of Gimilsin. The greater part of these animal tablets, however, are records of offerings to the gods or to cult objects. Some are accounts of provisions sent for feasts, such as the new moon, full moon and time of lunar obscuration; see 95 and 129. Others record supplies for the house of auguries, the temple kitchen, the palace, the house of records and other places. In such cases the animals are usually said to be *šu-bu* i. e. cut up, or *ba bad bar-gál* i. e. killed and dressed, as we should say.

Animals are frequently sent by the King, as in 113, 117, or by Patesis as in 91, 120, 127, 128, 154, or even by temples of other cities as 147.

No 179 reads like a grocer's bill. It is a receipt for oil, birds and butter.

Of special interest are the new month 68,[49] *Itu Billala*, "the month of burning" and Dada, Patesi of Nippur during the reign of Ibisin, 37 A, seal.

As questions that arise in connection with these tablets are touched upon in the notes added to the translations, in the "Word and Phrase Index" and in foot notes to name and other lists, it has been considered best here merely to call attention to certain features that seem important.

Not the least interesting of these are the seal impressions found, not only on the case tablets of Tello, but on some of the tablets of Drehem. Seal cylinders, as a rule, are undated and, at the most, indicate the reign in which they were used. It is highly desirable that exact dates shall, so far as possible, be obtained for those published in such works as Ward's "Seal Cylinders in the Library of J. P. Morgan" and his "Seal Cylinders of Western Asia". They contain important data for determining both religious and artistic development. New designs, such as 6, 26 and 27, particularly the last, are apt to occur on the tablets.

With these facts in view the seals have been carefully copied. This has been a difficult piece of work as there are six, eight and even more impressions of a seal on a single tablet; sometimes impressed before and sometimes after the tablet was written, giving them a fragmentary and often distorted appearance; besides which the seals

were evidently rolled over the surfaces rapidly and carelessly with consequent imperfect and indistinct impressions. If we add erosion through salts and wear and tear of time and breakage, it will be seen that the labor of reconstructing these designs is one of great difficulty and that, in some cases, it is out of question. In fact the whole work had to be done under a magnifier in the best light, portions of the designs being fitted together as they were found on various sides of the tablets. Nothing has been added to complete designs which was not found in the originals, and the fact that this work was done for me by so conscientious and competent an archaeologist as Prof. Wm. Max Müller will give assurance to those who may be inclined to doubt the reliability of seal cylinder designs thus obtained. Descriptions of the designs of the seals have been placed in the catalogue. Their archaic inscriptions have been added to the autograph texts, their translation and the designs, however, forming part of the translated tablets.

While the main purpose of this publication is to make these texts accessible to students of the business literature, language and religion of the civilization of the Ur Dynasty, at the same time it is recognized that others, besides Assyriologists, have a growing interest in the contents of the many thousands of tablets now in our museums and private collections. These people wish to know, not the views of scholars about the contents of a tablet, but the contents themselves, so far as they are translatable; and that, not in the garbled form that results from paralleling the translation with the transliteration, but in readable language, so far as a literal translation allows. With this in view a translation has been made of all but a few of the large lists. These have been summarised, as the translation of hundreds of names could answer no useful purpose. Transliterations have not been given, because the name lists and index of words will show assyriologists what values have been have used, and they have no interest for others.

It is felt that no one can read the varied translations of this collection of tablets, simple though the transactions with which they deal may be, without being convinced that, as a whole, they are reliable, and that steady advance in the knowledge of Sumerian contract literature is taking place.

Still, it must be recognized that the translation of unilingual texts is not yet on a firm foundation. The syllabaries and bi-lingual texts are often found inadequate, if not misleading. The translator, in such cirumstances, must rely on context, repetition of instances or the meanings of a sign and the archaeic pictograph.

In finding the meanings of some of the cult objects, officials, and technical expressions which are never explained, and for the interpretation of which we find no help whatever in the syllabaries, account has been taken of such texts as have been published, and of the peculiar relation of men and things that belong to a theocracy where all things centre in, and emanate from, the hierarchy of a cult.

These tablets teach us that, in the Ur times, say 2400 years B. C., the temples were the owners of practically all the agricultural and industrial resources of Babylonia. Such individuals as Bazi who, as conveyancer, handled vast quantities of grain at Lagash, and Abbashagga, from whom came tens of thousands of animals for the temples at Nippur, were, in all probability, not merchants on their own account but high officials, appointed by the chief temple at each of these places to transact its business. The temples were institutions, great compounds, such as are still to be found in India, where thousands are housed and find their activities. Such an institution necessarily had officials who, while they were priests, or, at least, belonged to some religous caste, were, at the same time, educated for and assigned to special functions. Such were the *Pa-al*,

or chief steward or warden of the provisions department of the temple, the *Šiti*, or accountant, the *Dup-šar*, or scribe, the *Gìr*, or conveyancer, the *Pa*, or foreman and the *Nu-banda*, or task-master. There is one region on this globe where conditions still exist that are probably similar to those of ancient Babylonia; namely Ladak and Thibet. There the Buddhist hierarchies in the monasteries rule supreme, and in them are centred almost all the arable lands, cattle and industries. There too is practised every species of divination and sorcery. Only the bloody sacrifices, forbidden by Buddhism, are wanting. With such facts in view, and the meanings and origin of such signs as *Pa-al* and *Shid* in mind I have made tentative translations of some of the official names which I hope are correct, but there are many besides, concerning whose functions nothing is known. The following is a list of the names of officials and employees that occur in these tablets. Their places in the tablets and my translations will be found in the Word Index.

In translating the signs for the various kinds of grain and flour that occur we are in the same position as with the officials. Little is absolutely certain. Yet certain general facts as, that barley has, from time immemorial, been the chief grain of the East, that hemp and other fibrous plants were known, that luguminous grains and vetches were largely used, have been established by excavation in Egypt and at Gezer in Palestine.

A list of the grains that occur in these tablets shows, not only the agricultural development of the Sumerians, but how uncertain is our knowledge on this subject, in spite of the mass of material that has come to light.

With regard to the domestic animals, especially cattle, we are in a much better position, though the varieties are numerous. The bovine kinds, together with sheep and goats, are pretty well determined, except the sal-aš-kar and the maš-du. The anšu class is also in doubt but anšu is, in Sumerian, probably the same as in Assyrian, a deter-

minative for almost any beast of burden as mule, horse, camel, and even elephant. The signs ù, bar + an, zi-zi, lulim etc., indicated the particular kind of beast of burden.

In the "Word Index" an effort has been made to distinguish the animals in these texts of which the following is a list.

In the name and other lists, as also in the word index, the Assyrian alphabetical order has been followed. There have been so many mixtures of alphabets of late that it seemed best to return to the old. The same course has also been followed in the transliterations of names. The indiscriminate use of Sumerian and Semitic values, adopted according to national fancy to form mellifluous names, is to be deplored. It is no doubt true that there are Semitic names, especially in the Drehem tablets, that require Semitic values, but they are easily distinguished. It is very desirable that a fixed standard for transliterating names be set, even though it be not absolutely provable that it is correct.

In the name list have been included field and granary names, because they frequently indicate the owners and are thus properly personal names, but this has never been done without adding a foot-note stating that such is the case.

It is not always certain that titles are not parts of names. As a rule they have not been made such but have been added as foot-notes together with such observations as the name suggested. It was thought best to leave the lists entirely free and to put all explanatory matter in these notes. It is hoped they will be helpful, as also the Index of Words and Phrases, which makes no pretense to being a glossary, and is intended only as a convenient medium for making necessary explanations of interpretations and pointing out verbal forms.

To difficulties in the tablets, as well as interesting points, attention has been called by remarks following each translation. A certain amount of repetition could not be avoided in such an arrangement as has been followed in this book, but it is hoped that the added clearness will compensate for this.

The d a t e s are given in the translations without formulas, but these can be readily found by a reference to the catalogue for the tablet in question.

For the years, Myhrman's revision of dates of the Ur Dynasty, found in SAD. B. E. series A vol II part I, has been followed, and for the Months, Langdon's "Archives of Drehem" and Thureau-Dangin's Jokha month list.

For convenience of reference the three calenders are here added, as indigenous month-names were used at the same time at different places.

In conclusion I desire to express sincere thanks for, and warm appreciation of, the help and instruction of Professors Clay and Hommel, to both of whom I owe much for practical help and constant encouragement. I desire also to express my gratitude to Professor Delitzsch for his confidence in me, and for offering to publish this work in so noted a series as the Assyriologische Bibliothek.

Translations and Summaries.

1. This is an inventory consisting of fifty lines. It is similar to inventories published by Lau, Reisner and others, but as it contains special features and new articles it is here published.

The first six lines are without numerals, and from the remainder of the obverse, and twelve lines of the reverse, almost all the numerals have been broken. The inscription, however, is almost complete. The contents are as follows.

A bondman and son. A bondwoman and daughter. A plow ox, a stable cow. A she ass bearing young. A sheep for sacrifice. ... enceinte sheep. ... goats (and) kids. ... polished (?) bronze chairs or vessels. ... bronze weighing scales. ... bronze axes. ... copper water receptacles. ... copper crushers. ... copper axes. ... small copper cuspidors. ... copper *kha-bá-da* (battering rams?)[1]. ... 5 copper augers. ... copper trumpets (or cymbals). .. 30 gur 240 ḳa of hemp seed? Some loin cloths, others belonging to soldiers or slaves, also worn out loin cloths.

From the reverse we learn there were a quantity of millet, more than a gur and 8 ḳa of salt in reed boxes, some manas of herbs for incense, beside 27 fine chairs, 6 fine beds. 11 (ordinary) chairs. 11 beds. .. 10 chairs worn out. .. 10 footstools of fine appearance. .. 10 (ordinary) fotstools. .. 1 fine platter. .. 10 (ordinary) platters. 19 covers for water courses, (i. e., small bridges or sections of a bridge.) 7 chariot yokes, fine quality. 8 (ordinary) chariot yokes, (i. e., yokes or harness for the horses of a chariot.) 2 ladders, 1 ship mast, 1 harpoon. 1 stone of one talent weight. 2 (other) stone weights. 2 stone bowls. 3 stones, their tax given. 1 stone, tax (or interest) has not been taken (or given.) 6 sheep (and) kids. Property of Du-du, (*du-du*, if not a name, may mean „has been brought.")

I have translated the sign *kid*, 'loin cloth', according to Barton's suggestion (B. W. 101), as the meaning is unknown except through the pictograph. Though the plural is not indicated from lines 12 to 21, these articles should probably all be in the plural as is shown by line 19.

My reasons for the translations will be found in the 'Word and Phrase Index'.

2. Lukalkal, son of Urkal, receives from Bazi, 7 gur, 120 ḳa of best grain. Transporter Aḫua. Year, Dungi 57th. Seal: Lukalkal, scribe, son of Urkal.

3. Maansum, son of Sag ... received from Bazi, out of the store house Urgar azaggim[2], 20 gur of best grain for seed.

The seal and the sign *dub* on cover are expressed by *šu-bati* on the tablet, as is usual in receipts of this kind. 7th Month, year, Dungi 56th.

---

[1]) Each weighed a talent or about 125 lbs. [2]) i. e. Urgar the silversmith.

4. The translation of this tablet is difficult, but the signs are certain as given. Its meaning apparently is:

Shagaga, a messenger to the river, or canal, Saggishgin, receives (*gab-a*) from Alla, for a gift (*sum šu*), 60 ḳa of sesame oil.

This is receipted for by Urbau, as the *dub* on the case shows, though the name is preceded by *gìr* on the tablet; which seems to show that Myhrman's suggestion (SAD. p. 8), that the sign *gìr* sometimes means "vise", is correct. The sign é which follows Ur-^{d}Ba-ú on the case, I cannot explain. On case o. 4. it will also be seen that *galu-kin-ge-a* is followed by *lugal* which is omitted in the tablet.

The date is 10th Month, Bur-sin 5th year.

5. Urgalalim the taskmaster, receives 2 gur 140 ḳa of best grain, to be paid to 74 slaves, each of whom receives 10 ḳa. The slaves belong to Enamḫani, and the grain is taken from the store house Ebilli in the 5th month of the 55th of Dungi.

Whether Enamhani, to whom these slaves belonged, was an individual, or whether it was an establishment where fish divination was carried on cannot be said for certain. Sacred fish ponds, connected with temples, exist in the Orient today in Syria, India, Kashmir, Burmah and elsewhere, and no doubt are used for auguries, as are the birds. The variant after Galalim may be completed as (*Galu-ša*) *aš-ru^{ki}-šu*, but this is uncertain. The part of seal remaining reads Ur-^{d}Bau. We should have expected ^{d}Galalim.

6. Urmesh the *Galushim* (incense or herb man) receives 40 gur of best spelt grain from Bazi out of the storehouse Ėaenna (temple of the canal). The dues of the Patesi. The grain was for the Patesi's food supply. Ninth month, 56th year of Dungi.

Two deities are represented on the double design of the seal, one with one worshipper, the other with two. Seal: Urmesh, son of Luningirsu, the *galushim*.

7. Agua, son of Urnina, receives 524 grain-fed sheep of the palace bought. The conveyancer was Urbau, son of Urshagga. 5th month, Bur-sin 6th. Seal: Lubau the scribe, son of Urnina.

Notice that the seal did not belong to Agua, but to his brother. On the reverse of the case, a little of the design of the seal can be seen.

8. Urshaggamu, son of Kuli, received from the storehouse Eaenna, as food supply for the Patesi, (being) sustenance of the supervisors of priests, 46 gur of spelt grain, first quality. Dungi, 56th year. Seal: Garurum, the scribe, son of Kuli, superintendent, or taskmaster.

This was a large supply, but it may have been a yearly consignment. The seal is perhaps the only example of this design that is dated. Note that, as in No 7, it did not belong to the man who received the grain, but to his brother.

9. Dakuku sends nine sheep to Ludingirra at Tsi^{ki}.

This tablet contains an unknown date viz. "Second year after the water, or flood." The design of the seal shows Gilgamesh and Eabani fighting a monster. Seal: Ludingirra, son of Urkal.

Lower Babylonia has its inundations like the Nile valley. This date refers, no doubt, to one of unusual size. Paleographically, this tablet belongs to the same period as the rest of the present group. Dakuku is probably a name, though it occurs in none of the lists. The signs may, however, convey some purpose for which the sheep were intended. The place Tsi^{ki}, so far as I know, occurs here only. RU. 160, Col. VI, 20, has an Agiṣi^{ki}.

10. The Pa (official) Lugalpaè received from Bazi, out of the storehouse of the goddess Ninharsag, 4 gur 150 ḳa of the best meal. 10th month, Dungi, 56th.

On O. of case we find a *ta* at end of third l. and *mu . . . šu* with the name of the recipient of the grain, showing that someone else received it in his name. Before the name of the month on the reverse we have *gìn-uš* — paymaster of the . . . *si-me* — some sort of employees who received the meal. The name of this individual has been broken away.

11. Anamu, son of Urbau, the son of Urdun, received from Bazi, out of the storehouse Eaabbakalla, 15 gur of grain, 1st grade. He was the chief accountant of the goddess Ninmarki. Year, Dungi 56th. Seal: Nannarshargub, the scribe, son of Urbau.

Abbakalla means ‚the precious or beautiful seashore'. It may be a name, however, and as such often occurs. Ea means house, water house or temple. For 'chief accountant' see *Šid* in Word Index.

12. Lugaluruda, the superintendent (*nubanda*) received from the great warehouse (*Edubba gula*) and packing house (*Gar-šer-šer* = bind together) for the weavers' house, 7 talents 20 mana of goats' hair. 4th month, Bur-sin 3rd.

The signs in l. 3 and 4 may be names, but it does not seem probable.

13. Sheshkalla, son of Lugalazi, received from Luninshakh 15 gur and 26 ḳa of bread, best quality, (together with) 30 ḳa of finest flour, bread flour. Dungi 56th. Seal: Sheshkalla, the scribe, son of Lugalazi.

14. Lukalkal, son of Urkal, received from Lugalgugal in the name of Shabba, who was not present, 327 large sheep, 300 large kids and 60 sheep. They were in the new

sheep house. 9th to 10th month, Bur-Sin 1st. Seal: The same as No 2 but the design has a god seated instead of a goddess.

The name in l. 2 is uncertain. It may be *Mu-šab-ba*, but if the *mu*, and *šu* (end of l. 3) are to be taken together, the name is Shabba, as I have rendered it. *Nu* almost certainly belongs to *mu-gál-la* = "who was not present".

15. Utumu, superintendent of oxen, son of Urdun, receives from Aliikh, out of the field Gubanda, belonging to the high priest of Nina, 70 gur of best grain, seed-grain for the watchman of Lumma (a canal.) High grade grain as ordered (*še ki-ba mà-mà-dam.*) 6th month. Dungi 56th. Seal: Utumu, superintendent of oxen, son of Urdun.

16. Urkal, son of Urbau and brother of Nikalla, received from Shueshdar, out of the storehouse Nadatum, 20 gur 270 ḳa of grain royal, and 6 gur wages for hiring. 7th month, Dungi 56th. Seal: Urkal, the scribe, son of Urbau.

The name Shuesdar may be rendered Gimil-Ištar.

17. Urgalalim, son of Urshagga, received from Bazi, out of the storehouse of the goddess Ninharsag, in charge of Luazagnun, 6 gur of grain royal for seed. Year, Dungi 56th. Seal: Urgalalim, the scribe, son of Urshagga.

I have taken for granted that *ta*, at the end of l. 4, meaning 'from', implies that this storehouse was in charge of Luazagnun. Bazi here, as elsewhere, if really a person, was a commission merchant, an intermediary between certain temples and purchasers or borrowers of grain.

18. Urgula, son of Urazagnun, received (*ni-ku*) from Urguenna, the farmer of the goddess Gatumdug, an ox and a cow enclosed (*úr*) literally 'roofed'. The official (Pa) was Bazi. Bursin 6th. The design of seal, Gilgamesh, Eabani and the monster is important as a dated example. Seal: Urgula, the scribe, son of Urazagnun.

19. Ursagubki, son of Ili, the chief penetential priest, received through Bazi, from the storehouse Ashaggidakhkha, beside (the temple of) the goddess Ninharsag, 30 gur of hemp (*áš*) royal for seed. 7th month, Dungi 56th. Seal: Ursagubki, son of Ili, chief priest of penitents.

It seems as if *da* . . . *ta*, l. 4, belong together and should be translated, 'of' = 'belonging to'. The third sign of the seal, Ub, occurs in a gunified form in l. 6. ❮ has the value u = ibratu, 'a district'. (Br. 8686.) This is combined with  = ub = ibratu so that úb is the probable value. Examples of the archaic form of this sign are rare. That given by REC 268 is the form as given in l. 6. The sign occurs again in the seal of 22.

20. Urnungal, son of Erinda and Lugalgugal, son of Lukal, received through Ishkishula, the conveyancer was Lugishgalki, son of Urbau, 30 ḳa of best house pitch *gi-si-gi ma-an-nam-mú-dū é ba-ab-su-ub,* all pure to renovate the temple building. For this translation see Index of Words and Phrases. For further discussion see Index of Words and Phrases.

The date is 8th month of Bur-Sin's 3rd year. There are two seals. Obverse seal: Urnungal, the scribe, son of Erinda. Reverse seal: Lugalgugal, the scribe, son of Lukal.

21. The conveyancer of the Patesi of Nippur gives this receipt for pots, or pots of milk, from Akalla, the mourner, which the ship Udzalla (= Morning) brought to the palace. The receipt is for 35 pots of which amount 22 were (*ba-ra-gi-in*) not brought.

Ba-ra (Br. 123) = *la*, 'not'. *Gi-in* means 'brought'. It is possible that *bara* here means the 'portion', *gi-in* brought, because on the case nothing is said of 35 pots, but 25 pots are noted as from Akalla, by ship brought to the palace. Note the variants between case and inner tablet; 35 *dug-ga šag-bi-ta*, not on case. l. 3 𒁹𒁹𒌨 = inner tablet. l. 1 𒁹𒁹𒌨 = on case. *Ba-ra gi-in* on inner tablet only. On case l. 5, *dub Patesi ka.* Tablet l. 7, *ĝìr Patesi*, omits *ka.* As the case is published with the tablet, these interesting variations can be easily seen.

The date is 11th month of the 1st year of Bur-Sin.

22. Ursagubki, chief penitential priest, received from Bazi, out of the storehouse of the field *Nadatum*, 12 gur of new seed-grain, first grade.

This tablet shows that *Nadatum* was a field. For the seal, see remarks on tablet 19. The date is; 7th month of Dungi 56th. Seal: Ursagubki son of Ili. Chief priest of penitents.

23. Nannarshag the overseer (*pa*), received from Bazi, out of the storehouse of the goddess Ninkharsag, in charge of Luazagnun, ten gur of best grain, sustenance for 50 water carriers, each of whom received 60 ḳa of grain. The superintendent (*nu-banda*) of the house Namkhani was Urgalalim. 11th month, Dungi 56th. Seal: Nannarshag son of Ludugga.

For translation of line 3, see Lau's list under *bal.*

The sign after Nannar, l. 7 may be *kam.*

24. Urkal, son of Urbau and brother of Nikalla, received from Bazi, out of the storehouse Eaabbakalla, 15 gur of best grain. The overseer was the accountant of Ninmarki. 8th month, Dungi 56th. Seal: Urkalshesh, the scribe, son of Urbau.

Note that the *dup-šar* is named Ur-^{d}Kal-šeš in the seal. This *šeš* occurs at the end of l. 5, followed by Nikalla and therefore means 'brother', but in seal it is followed by *dumu* Ur-^{d}Ba-ú. Whether l. 7 is a name, or not, is uncertain.

25. Lubalshagga received from Namkhani, by the cargo ship Sigguri, 8 gur of grain meal, royal. 11th month, Dungi 57th. Seal: Lubalshagga, the scribe, son of Urninmarki.

Má-a-sig-ga means a cargo ship. As there can be no question of wool in this tablet, *sìg-gù-rí* must be the name of the ship. It is an exception to find a tablet of the Ur dynasty with a standing deity in the seal, as in this case.

26. Sheshkalla, son of Dada received from Utumu, from the field Urudu, 12 gur 290 ḳa of best grain, in the month Sheilla, and 21 gur 270 ḳa in the month Ganmash. Food for the slaves of weapons and vestments. The year is probably Dungi 57th, but the formula reads; *Mu uš-sa ki ba-ḫul. maš^{ki}* probably understood. Seal: Sheshkalla, the scribe, son of Dada. *Tub-ba* (l. 5) = *Lubuštu*, 'clothing' Br. 10568.

27. Lulamu, son of Minibal, a temple Warden, (in seal called the Warden of *Nin*) received from Urbau, the scribe who orders (*mar-sa*), 45 days ..... *ú* and 45 days *Lù* ..... *ad*? House of Lugaluru(^{ki}?). 4th and 5th month, Bur-Sin 3rd. Seal: Lulamu the *gar*, scribe, son of Minibal, Warden of *Nin* (the great lady).

The break in this tablet and peculiarities in the inscription make it highly desirable that it be opened, but this has not been done because the design of the seal is so far unique. This design presents a standing deity and worshipper. Between them a plant or flame springing from a mountain and guarded by a serpent. Behind the deity, probably Innanna, is a caduceus, a two-headed serpent-rod, supporting a vase or disk which, later, became one of the emblems of Ishtar. What seems to be a boomerang is in the field before her.

Whether the whole of l. 5 is to be taken as a name is uncertain. I have not done so, but taken *mar-sa* as a verbal form. It will be noted that the scribe Lulamu has *gar* after his name in the seal. *Mu* means 'give', and *gar*, 'bread', the whole name meaning 'the priest, or musician, who gives bread'. *Gar* is also a title; see HWB p. 659 under *šaknu*. He is the son of the *Paal* Ė or Warden of the temple. This is not a name but a title. The seal proves that he is the son of Minibal who is the *Paal Nin*, Warden of the great lady or goddess, perhaps. Thus we see that *dumu* is used before titles and vocations, and what follows is not always a proper name. So far as we can understand, the tablet concerns two persons who served 45 days at a royal house, known as *Uru*(^{ki}), during the 4th and 5th months of the 3rd year of Bur-Sin.

28. Urtur, an accountant priest of the god Dumuzi, received from Bazi, out of the granary Igigishshar ('in front of the garden') 72 gur of best seed-grain, in the 56th year of Dungi.

The seal was probably borrowed by Urtur, as it reads. Seal: Urnigingar, the scribe, son of Urshagga, supervisor of the house [*unū(g)*].

The seal is important as a dated example of the goddess with wheat protruding from the shoulders, Nisaba or Bau, goddess of fertility. Ward SCWA, p. 375.

29. Urbau, son of Nadi, received through Bazi, out of the granary Ebilli (new temple) 120 ḳa of the best spelt grain from the shepherd Lumariki. 9th month, Dungi 56th. Seal: Urbau, son of Nadi, Herbman.

The first sign of the second line is doubtful on account of the flattened condition of the tablet. It looks like *pa-ba*, but is probably *sib*. Possibly it should be translated from the chief of the Mari[ki] men.

Note the sign *li* or *gûb* after Nadi, l. 6, and compare with title of same individual in the seal, *galu-šim*. As *šim* means herbs and *li* or *gûb* primitively signifies a garden bed, according to Delitzsch, System, p. 133, the two may be synonymous. See in note to 'Name List' for the probability that these signs mean juniper berries, used as incense.

30. Addakalla, son of Ursin, borrowed from Urdulazagga, 120 shekels of silver, its interest being five shekels on every 60 shekels (i. e. 20 per cent). In the month Sig he shall return it. In the name of the King he has sworn. Lugalkhegal, Ekibisi (and) Lulniku, witnesses. 12th month to 3rd month of the next year. Year King Ibisin devastated Simurum = (3rd year or later). Seal: Addakalla, son of Ursin.

As this contract extends from one year into another, the time of the loan is probably for four months, the months Sig and Še-gur-kud being included. The e, after *lugal* in date, does not imply two year names, because the tablet was written before the name of a following year could have been determined.

31. Urdulazagga lends Nanaa, son of Nurili, 2 gur 200 ḳa of grain at interest, the rate not stated. On the 30th day of the month Kharsizu (2nd) he shall repay it. In case he does not repay it, he shall give in exchange double; 5 gur 100 ḳa as agreed. Sworn to in the name of the king before — Nusukkal, Lu Enlilla, (and) Ur Ninib, witnesses. Month of Kharsizu, 5th day. Year Gimil-Sin, the king, built the temple of the goddess Šara of Gishukh[ki] (Umma) — i. e., 9th year. Seal: Nanaa son of Nuurili.

The text of this tablet was verified by the removal of part of the case, and, with the exception of the first sign of the first witness, is fully given. The last signs of the 7th and almost the whole of the 8th line were completed and verified by the inner tablet. The whole case could not be removed as it was partly baked into the signs of the inner tablet.

32. Urturra and Shanaaka have paid to Ennakasi and Lugalmea their demand for sheep missing. This tablet (or their quittance) let them receive. The verbal forms in this tablet are interesting. Note the form of mé, l. 5.

33. Nalag has given 20 gur of grain to Lugula the baker, Shanaaka and Nikalla for a portion of their pots. He should leave more. It is agreed in the matter of this transaction that I lay it aside. As a pledge of this I will set aside from the smaller part of (or from the crop) the quantity agreed to be measured. May he leave more. It shall not be returned.

The first sign of l. 12 may be *ḫum*. In that case to be translated, 'that which is grown' i. e. the crop.

33 A. Lugalmagurri borrowed from Urdulazagge 150 ḳa of fine *ba-ba* grain. The rate of interest not stated. Baelul and Ninzagi witnesses. On left edge. In the name of the king sworn.

Date 12 th month and 1 st year of Ibi-Sin.

From the two signs *azag-gĕ* of the seal, which alone are legible, we learn that the lender of the grain, Urdulazagge has stamped the tablet. Usually the borrower does this. There can be no doubt about the reading of the signs *azag-gĕ* though we should expect *azag-ga*. The repeated seal impression, in which these signs alone appear, make it certain. *Dul* in l. 3 has an unusual form, due possibly to a scribal error.

34. Urdam received from Age of Urudul one ḳa of honey.

5 th month, no year.

The third line is uncertain as the second sign may be *urudu* and the third *ba*. If the second sign is, as it seems, *urudu* and the third *dul*, it means 'copper hill', the place whence the honey was brought.

35. Box of tablets of long accounts of the granary. The Conveyancer (*gìr*) is Bazi. Year, 56 th of Dungi.

This tablet was hung outside a box of tablets to indicate what the box contained. It was suspended by a string formerly in the double hole in the left side.

36. Box of tablets concerning (*nin-šid-ag*) the wages of slaves (or soldiers) it is. Date, from the 5 th to the 6 th year of Bur-Sin. See note to No 35.

37. Lunannar the Thronebearer has obtained through Urgalalim two loans. At Girsu, one of 27 gur, $275^1/_3$ ḳa of best grain, 4 shekels of silver, and a kid. At Urubar 42 gur $180^1/_3$ ḳa of grain, 9 shekels $17^1/_2$ she of silver. The total grain received was 70 gur, $155^2/_3$ ḳa, but the tablet states; Total grain, 69 gur, $278^2/_3$ ḳa. Total silver, 13 shekels, $17^1/_2$ she. Total kids, 1. Of this amount (was repaid), $5^1/_3$ shekels, 12 she of silver to the Patesi and . . . ? . . . shekels less 30 she to Urkal. Here follow five broken lines telling of the repayment of grain, the kid, and a sum of silver to Urgalalim, of which Urkal again received a part, 7 shekels less 24 she, as agreed with Lunannar. The business was between Urgalalim the *Galuninan* and Lunannar the Thronebearer. Bur-Sin, 2 nd Year. The *Galuninan* probably had charge of the consecrated women.

37 A. The Conveyancer (*gìr*) Ilishag received from Urdulazag $60^2/_3$ shekels and 20 grains (*še*) of silver, on the 13 th day of the month Sigga (3 nd).

The year date is undetermined. See catalogue. Seal: Da(da) Patesi of Nippur. Conveyancer, Ilishag, scribe, (thy) servant.

As the official known as *gìr* was denoted by the same sign as was used for ass and other beasts of burden, he probably had supervision over these animals, and

sometimes may have been an actual muleteer. Conveyancer, as a translation, will not be far wrong. It is curious that the inscription does not read 60 shekels, 140 še, instead of $60^2/_3$ shekels and 20 še. The form of *sig*, in the month name, is unusual.

The seal belonged to Ilishag, the Conveyancer of a Patesi of Nippur, of whose name, unfortunately, only one sign appears. The name was probably Dada. This Patesi is known from a seal cylinder SAKI p. 160, but his place is only probably fixed by Thureau-Dangin as at the end of the Ur dynasty. Tablet 37 A has an undetermined date. As 37 A is exactly similar in color, size, material and writing to 33 A, and as this is dated 1 st year of Ibi-Sin, we may safely assign this date formula to one of the years of Ibi-Sin, and also Dada, patesi of Nippur, to that time. To which of the last 22 years of Ibi-Sin it belongs cannot yet be said.

38. This tablet is without year or month. It is a simple note for entry in some larger account. The first line has been largely broken away, but by adding up the amounts stated, including the interest, we arrive at a total corresponding to the signs which are left:

i. e.,  = 600 + 60 + 50 — 1 = 709 gur of best grain. The grain is for food divided (*shag-bi-ta*) as follows:

62 gur 240 ḳa, dues of the Patesi,
40 gur (for the) *Abkhal*,
30 gur (for) Urmesh, son of Bada,
605 gurs (for some temple. ?)

Its interest was declared: 10 gur to Urshukkal, 1 gur 60 ḳa to Lukalla. Then follows an erasure.

39. These are allowances of drink for a festival: 10 ḳa of best sweet drink, royal festival of the new moon, and 15 th day; 10 ḳa of sweet drink for the well of divine Gudea, new moon and 15 th day. 1 gur of sweet *usa* drink for the god Dunpae of the great temple (or palace?). 120 ḳa of best *du* drink for the Western god Idniik. 1 st month.

This God, whose name may also be written Idnigál or Anigál, is unknown from other sources, except a tablet in the Columbia University Collection published by Arnold.

Šig l. 1, 4, 6 may also be translated 'pure'.

40. 50 ḳa of drink, 50 ḳa of bread and 10 ḳa of sesame oil, a regular due (sent) on the 10 th day. Addanabir (*bi-ir* = *šum*?) was the messenger. To *Asham* it came (*ni-im-du-na*). 7 th month, Dungi 57 th year.

41. This tablet concerns the assignment of men to various temples and places: 28 men at the house of messengers (or purification) (*E-šukkal*) (under the) Superintendent, Urgishku (and) 38 men at the house of Seers (*abkhal*) (under the) Superintendent Lugalnunkiku. 66 men. They were divided as follows (*šag bi ta*):

16 (were assigned to the) house of the Augurers (*É-še-pag-ga*).
6 (to the) Temple of Cutha (*Gú-dŭ*).
1 „ „ „ „ the god Dungi.
1 „ „ „ „ „ god Bur-Sin.
1 „ „ „ „ „ holy *Apsu* (miniature sea = EA).

3 (at the) appointed offerings of the Temple Virgins (*Nin-an*).
15 (as) followers of the King (*lugal-ra-us-sa*).
2 (as) overseers of the strong (riding?) asses (*sib anšu-zi-zi*).
5 carriers of *manu* wood.
1 strewer of straw.
1 (at the) fish pond (lit. garden = *šar*).
1 plucker of dates.
4 lifters-up of rice (*a-ter* = rice, according to Lau).
4 at the temple of the entrance court. Hommel suggests; „At the house of the lambs present".
4 (at the) dust pots (*duk-iš*) (for sweepings?).
1 (at the) great menhir (phalic stone).
66 men present on the fifth day of the 11th month, (*Še-gūr-kud*).

Some of these translations, such as *in-zar-zar*, 'strewers of straw'; *ḫa-šar*, 'fish pond'; *ni-ka-lum*, 'pluckers of dates', etc., may be found to need revision when fuller material is at hand. It is certainly a most interesting tablet and will repay careful study. Compare with Ct. VII, 47, 17775.

42. This tablet records the results of wool harvests at three places; Girsu^{ki}, Kinuner^{ki} of Nina^{ki} and Guabba^{ki}.

Part of the wool is weighed and part not yet delivered. The three items of weighed wool (ls. 6, 25 and 39) are followed by *dag-maḫ*, which is not clear. It may be a name, an official or a weight. Following this is a rate, to be levied on the wool, and, after this, the result of the calculation.

As the arithmetic of this tablet is everywhere else correct, it is to be presumed these results are correct also. They are, in fact, very complicated operations, and Prof. Hommel claimed that he obtained the results by the use of logarithms. For the sake of those, other than Assyriologists, who desire to work out the results, I will add here the table.

1 talent or gun = 60 mana
1 mana = 60 shekels
1 shekel = 180 še.

Whether the rate in ls. 9, 27 and 42 is a rate of taxation, or a scale of wages is not certain, as expressions, such as *bal*, *rugga*, *rugrug* and *atugga*, are entirely wanting.

The following is a translation.

257 talents 25 manas of wool of the shepherds. 23 talents 10 manas wool of *Nadatum* sheep.

Here, from l. 6 to 10, a piece is broken from the tablet, but we may supply a portion of what is lacking by a comparison with other parts of the inscription, thus:

(280) talents 35 manas of wool from (*dag*)-*maḫ* (the rate for each talent) was $5\,^{5}/_{6}$ manas, and (7 shekels?).

Its capital sum (*sag-bi*) i. e. the result of the calculation — being 27 talents and 57 manas of wool. (The sum total is) 308 talents 32 manas weighed (*ba-laḫ*).

Here follow (ls. 14—21) several items of wool which were *laḫ-ni* i. e. not yet delivered. 12 talents $50\,^{1}/_{3}$ manas was ordinary wool, and 11 talents $7\,^{1}/_{3}$ manas was wool of unweaned lambs of the shepherds. 18 manas of wool was of the sheep of Udulu,

59 sheep that were wanting. The wool also (of *Nadatum* sheep; see l. 61—62). 1 talent 58 manas, of Luningirsu. The (wool) not delivered (*lal-ni-ám*) is at Girsu^{ki}.

This ends the record of the first lot. The second follows:

30 tatents 8 manas of wool from *dag-mah*, each talent at the rate of 8 manas and 4 shekels. Its amount is 3 talents 3 manas. (The sum total is) 33 talents 11 manas weighed.

In addition 7 talents $56\,^1/_3$ manas of ordinary wool together with 2 talents of the wool of sacrificial sheep and 3 talents $23\,^1/_3$ manas which was from unweaned lambs. The (wool) not delivered is at Kinuner^{ki} of Nina^{ki}.

The last record is of 304 talents 37 manas from *dag-mah*, each talent at the rate of 5 manas $19\,^1/_2$ shekels. Its amount is 37 talents 2 manas. (The sum total is). 331 talents 39 (manas) weighed.

In addition 6 talents 48 manas of (ordinary) wool and 21 talents $32\,^2/_3$ manas, which was from unweaned lambs, was not delivered. That which was wanting was at Guabba^{ki}.

The tablet closes with summaries and date. Total: 673 talents 22 manes of wool weighed (add l. 13, 29 and 46). Total: of wool wanting, 29 talents $52\,^2/_3$ manas (add l. 14, 19, 31, 33 and 48). Total: wool of lambs, 36 talents $3\,^1/_3$ manas (add l. 16, 35 and 50). Total: wool of sheep wanting at *Nadatum* 1 talent 58 manas (see l. 21).

These were not delivered (*lal-ni-ám*). Total of totals: 741 talents 16 manas. Date: Year Bur-Sin became King.

43. 4653 sheep and 9 leaders. The sheep were present as declared, the addition (to the common store) of wool brought in. Less 4 talents $240\,^5/_6$ manas for cloth-wool royal, 2 talents, $58\,^1/_2$ manas for cloth-wool next royal, 47 talents, 25 manas for cloth-wool, third class, and 2 talents, $27\,^1/_2$ manas for cloth-wool of the fourth class. A total of 55 talents and $55\,^5/_6$ manas of wool. Less (also) wool that was at the weigh house. Added (namely) 58 talents 7 manas of cloth-wool, *lumzadu* quality, and 58 talents $10\,^5/_6$ manas of cloth-wool, *du* quality. A total of $116\,^5/_6$ talents, $17\,^5/_6$ manas of wool. Addition of wool declared brought in. The addition is less the *gukkal* sheep wool. Third year of Bur-Sin.

This tablet has not a single name, except Bur-Sin in the date. It is unusually interesting, not only for its perfection of material and writing, but because it gives the number of sheep in the flock and the amount of wool this flock yielded. The date formula for the third year of Bur-Sin is also thus far unique, having two variants from the usual form.

The inscription has to do, not with cloth, but with wool, separated and classified according to the kind and quality of cloth to be woven from it. Therefore I have translated *sìg-ku* 'cloth-wool'. *Imma*, in lines 3, 15 and 22, is not an official, but a verbal form as I have rendered it.

The wool from the gukkal sheep, probably those specially selected and fattened for sacrifice, is not included in the record, as stated in line 23.

44. Dungimishar received from Udamisharaam who brought it, $7\,^1/_2$ mana of combed, black wool, procured (*šu gi*) of the sheep of Sua^{ki}. Wages of the prophet. 1st month 5th year of Bur-Sin.

The sign for wool, line 2, is not usual. It looks like *iš*. Reisner suggests the translation "combed" for *gir-gul*. *Šu-gi* may mean 'old', 'gray', 'double', or 'receive', 'procure'. I have taken the last as most suitable for the passage. Note that the usual *galu-su* sheep are called the sheep of the men of Sua^{ki} (l. 4).

Note also line 5 *Uš-gub-ba* = *Amel gubba* = *Maḫḫu* Br. 4909 HWB p. 397. This tablet is from Drehem and has been placed here because of its contents.

45. Aninisu the head weaver, received from Dungimishar $54\,^1/_8$ manas and 2 shekels of cloth-wool royal, 59 manas of cloth-wool next royal, 2 talents, 57 manas, 10 shekels of cloth-wool, 3rd quality. Of the transaction part of the payment has not been made. Third year of Bur-Sin.

Though this tablet was acquired with a lot from Drehem, the characters of the cuneiform, the contents and the unusual date formula are all so similar to 43, which was acquired in 1904, and came ostensibly from Tello, as to make it possible they were both written by the same scribe and came from the same site.

46. Lugalnunkišu received from Lukalla out of the great house (*gà nun*) 5 gur, 180 ḳa of best grain as food for the slaves of the house of the *baru* priests. 11th month, Bur-sin 6th.

These priests were diviners of some kind. In the date *ba-ḫul* is omitted. For *ga-nun* l. 7 = *karû*, 'storehouse', 'granary' see PA p. 200, note.

47. This is but one side of the middle part of the reverse of a tablet. Certain persons receive or deliver copper turning implements, augers or scythes. The numbers 59 and 49, given in lines 5 and 6, are considerable and point to something in common use by a large number of people such as would gather at a harvest. The form of the numerals in line 5 is very unusual for this period.

48. Garurum the overseer received from Bazi, out of the storehouse of the goddess Ninkharsag, 12 gur, 180 ḳa of grain, food of *shaduf* slaves. There were 42 slaves who received 90 ḳa each. The supervisor (of the slaves) was Urninkish. 10th month. Dungi 56th.

This is no doubt the inner tablet of a case tablet. The name ^{d}Nin-Kish, 'lady of Kish', is interesting. I have not seen this goddess mentioned elsewhere. Perhaps it was Innanna who had a temple at Kish.

49. Akhua received from Siruab, out of the granary *Gishsharzuḫur* (garden of interest, increase?) 70 gur, 180 ḳa of best grain as food for sheep.

Such inscriptions as this and the preceding one are in favor of the reference of *lugal* to weight rather than quality. One would hardly expect the finest grade of grain to be fed to slaves and sheep. *Zuḫur* in *Gishsharzuḫur* may be the semitic for flowers. 'Flower garden'?

50. Guugu superintendent of oxen received, in the name of Nammakh, from Bazi, out of the granary of the temple of Ninmar^{ki}, 5 gur, 180 ḳa of best grain for eight farmers, each to have 210 ḳa. Ground grain of the farmers. 11th month, Dungi 54th.

Še ḫar apin-ne may also be translated, 'the grain is payment (*ḫubûlu*) of the farmers'.

51. Maansum received 11 gur 60 ḳa of best grain, wages for hiring of *shaduf* slaves in the watered fields of the god Nindara (or Ninsia). 4th month. Dungi 56th.

Sug-gan may mean 'long field, or acre' but *sug* also means *šaḳû*, watered.

52. Lugalgugal received from Siru, 5 gur, 80 ḳa of best grain as fodder of *gukkal* oxen. 4th month. Dungi 56th.

The second line of this tablet is evidently an erasure, though most of it remains unerased. The first sign intended for *ki* was written like *sìg* and the second and third intended for *si-ru* looked like *šag*, so the whole was written over as l. 4. I have translated *gud gukkal* as 'gukkal oxen'. The probable meaning would be sacrificial, or festal oxen. The true translation may, however, be 'oxen (and) lambs'.

53. This tablet is incomplete. It mentions four men at the house of *zid-kash*, (possibly beer), who were carriers, i. e., coolies, in the field, before the vineyard of An-ka (or ^{d}Ka?), and two harvest work-oxen which belonged to the officials Abba and Urnindara respectively.

Translations, in such a tablet as this, can only be tentative.

54. Ili, the superintendent of cattle, (brings) 14 gur of best grain of the field Gidakhkha; Urmama, superintendent of cattle of the goddess Nina, 2 gur from 10 farmers, each giving 60 ḳa; Abbagina 6 gur from 10 farmers of the field Ishdubba, each giving 180 ḳa, the total being 22 gur. From this amount 12 gur was made into flour. Credit of Ililushagshag, and 3 gur 100 ḳa were consumed by 10 kids, each receiving 100 ḳa. Bazi, the great Patesi, received it. 6 gur 200 ḳa is the credit (*dub*) of Urnina the son of Nabashag, a partial payment, visèd by Bazi the great Patesi. Total brought, 22 gur. A business transaction of Urshagga the Land Chief. Bur-Sin 6th year.

This tablet has a historical value, as it is dated, and shows that a Bazi was great Patesi of Lagash during the 6th year of Bur-Sin. Reisner's "Urkunden", 16, VII, 23, where this Bazi is also given this title, lacks the date. He suggests Bur-Sin 4th, which is very nearly correct. The amounts mentioned are due the Patesi. l. 1, 5, 8 give the total in l. 11 = 22 gur. l. 13, 18, 21 give the total in l. 26 = 22 gur. The tablet was written over and the whole erased. At the ends of l. 16 and 21 the signs *si gal* and *e* are the remains of the erasure. *Si-gal* is part of the word patesigal. Slight indications of this erasure appear in other parts of the tablet also, as in l. 3. In l. 14 *dub ni* is to be supplied as per l. 2. *Lù šag-šag*, l. 14 is, perhaps, a title = 'man of date palms'.

55. 27 gur of best grain, from the granary Nimene, were paid out, as wages, for hired ox teams. Abbamu, son of Nabashag, received 4 gur 180 ḳa. Shuazaggi, 3 gur 60 ḳa. Garurum, the Cup-bearer, 11 gur 180 ḳa. Lugula, through Merabba, 1 gur 60 ḳa. Adda, son of Gishbad, 3 gur 180 ḳa. Lugaluedin, chief butcher of the god Nindara, 2 gur 240 ḳa.

For translation of l. 13, see RU. 17, Col. I; 9 etc. In l. 11 *Šum* = a slaughterer = *ṭabâḥu*, i. e., of sacrifices. See Arabic ذبح.

56. This is a fragment, a corner, of a very large tablet. It contains 70 ls. and the whole tablet may have contained over 500 ls. It is a ledger account, covering outlays of wages and food made by a great central building to the overseers of a large number of temples, of which eight are recorded in this fragment. All, except one, belong to

well known gods of Lagash — Ningirsu, Dumuzi, Dungi, Ningishzidda, Gishbare, Nindara. The exception is E Namhani, also no doubt a temple, possibly for divination by the movements of fish. Attached to these temples were the overseers (*pa*) who distributed the wages and food to the laborers. Thus, belonging to the temple of Ningirsu were Urbau who received 7 gur, 240 ḳa; Lunaelaki who had 17 gur, 240 ḳa; Dingir Utumu, who had 14 gur, 180 ḳa; Ursagubki who had 86 gur, 240 ḳa.

The records of the overseers of the other temples are made in a similar manner. In each case it is stated that the grain is wages for hiring (*á túg-gà*). From Col. V, l. 60—62, we learn that the transactions of a certain Lugina involved 59 gur, 270 ḳa, which would, in our measures, amount to about 190 barrels (a barrel equalling 196 lbs.) and that those of Urgalalim, son of Luninmar^{ki}, concerned 6 labourers stationed (*gub-ba*) at the rivers (or canals) Lugalsagdana. RU. 160, Col. VIII, 7—9, mentions Alukani, Patesi of Sagdana. The place is mentioned again in No. 60,[79] of this collection. It seems to have been near Nippur. See RU. 113, Col. IV, 7 and 8. The colophon on col. VI states that the subject of this tablet is wages for hiring and grain received by labourers from the possessions of the Unu (= holy house). Year Urbillum^{ki} and year Kimash^{ki}. Two years. 55th and 56th of Dungi.

57. This is a record of payments of silver to choristers of various temples and sacred buildings of Lagash. A series of names preceded by , or , is followed by the word *uš-ku* of such and such a temple, or place. The sign means; '1 silver piece', probably a shekel in weight.  means; 'entitled to one silver piece but not taken' *nu-(dib)*. That *dib* is understood after *nu* in each case is proved from the summary, l. 31 and 32. *Uš-ku* in ls. 11, 17, 21 etc. when following a number of names, is in the plural number, though this is indicated only by the context. The post-pos. *ta* at the end of l. 12 and passim is to be translated; 'of'. l. 13, the sign *kisal* has also the value *bur*. Thumb nail marks after the figures in l. 1 and 19 may have some significance. Remains of erasures occur in many parts of the tablet, and have made its reading somewhat difficult.

The following is a translation of this unusual temple list.

1 Niggabau, son of Elildune (Emune?),
1 Lumama, son of Dulkulu,
1 Luushgina, son of Sulul (or Banar),
1 not (taken) Kalammaluni (or Uggaluni), son of Siru,
1 not (taken) Urgalalim, son of Utubarra,
Singers of Ningirsu and Bau.

1 not (taken) Enshargûbbur, son of Lugallildune (Lugalmune?),
1 not (taken) Urdunpae, son of Lugalsalushsa (or Lugalsalussa),
Singers of Nina who determines brothers (brotherhood).

1 Enninakal, son of Ekigalla,
Singer of the god Gishbare.

1 Urdarru, son of Utumu,
1 Urutu (and)
1 Abdikhi, sons of Lugalursag,
Singers of Huneru^{ki} (= Ḫuerim^{ki}).

1 not (taken) Rikibi, son of Lugalkhegal,
1 Urningishzidda, brother of Uren^{ki} (= Urea),
Singers of Guabba^{ki}.

8 have taken,
5 have not taken.

L. 33 and 34 are probably to be translated; silver paid each singer, for payment of singers. *Lal . . . . ta uš-ku ušum šu.*

Col. III:

1 Garbau, son of Khupipi,
1 Urur,
Singers of Ningirsu and Bau.

1 Urbau son of Urdaranna (Ursianna?),
Singer of Saqala.

1 Nannarmaansum,
1 Urbau, his brother,
Singers at the temple of Babbar.

1 Ludingirra, son of Ekigalla,
1 Lubau son of Lugalsi,
Singers of the god Gishbare.

1 Rikibi, son of Atu,
Singer of Gatumdug of Lagash.

1 Lunarua, son of Urutu,
1 Lugalsakhan, son of Urbarsiga,
1 Luigimashu, son of Urenki (or Urea),
Singers of Guabba^{ki}.

11 received (*shu* [*-ba-ti*]).

The singers each were paid.

1. Urnegun, cutter of tablets.

(Total) 12.

Money paid as hire (see *ku* in *á-túg-gà*).

Dungi, 53rd year.

In the above tablet Urnegun, the tablet cutter, is the only person mentioned who is not a temple singer. His name is apart from the singers.

58. This large tablet of 205 lines is a list drawn up for the paymaster, Lugal-azida, to pay for work done (*igi + gar-ag*). It is dated at the 'house of Seers' (*abkhal*) of the temple of Nina in the fifty-third year of the reign of Dungi.

Col. I and Col. II to l. 63 contain amounts to be paid to the persons named. Reisner, followed by Pinches, in his notes to tablet 64, Amherst collection, makes the numerals , , , refer to the time of service. Thus the sign would mean

half time. "So", Pinches remarks, "in all probability, the wages were paid in grain". In this tablet they denote the actual amount paid. The sign *nu*, as we saw in tablet 57, is an abbreviation of *nu-dib*. As this inscription is very long, and its literal translation could serve no purpose, a few lines to illustrate this point will suffice.

(1) 60 ḳa for Khukhu,
(2) Not (taken), Urpasag.
(3) ½ (gur?), Merdibil.
(4) 1 gur, Urninmuk.
(5) 60 ḳa Lugalkagina,
(6) his sons.

It is not perfectly clear whether they are the sons of Khukhu or of Lugalkagina. In l. 14 the sign ⊢< signifies that the person whose name follows is dead. The sign *pap* = ⊢< means 'another' as Pinches has shown. It can best be rendered by; 'a substitute' (took it), *dib* being understood as in the case of *nu*.

The persons named were employed for various kinds of work. l. 21, *šu-dùg-ga* = *naḳaru*, 'a plowman', gives us a hint as to what the employments were.

At l. 64 the nature of the list changes. The names continue, but the amounts to be paid are no longer written beside the names. Instead of this we have the time of service. Thus, l. 64, Urgar served three months at the temple Agazushika; i. e., 'the temple of the glorious portico'. L. 71. Urbau served 4 months at the temple of the god Pasag. l. 82; Nadi, 5 months and 15 days at the temple Shaggipaddu[1]; i. e., 'the announcer of the true heart'. In each case the time of service is specified, and it is left to the paymaster to reckon the amount due which is not stated.

Aside from the new names contained in this tablet, some of the temples are of special interest. Beside the more usual ones, we have the E Agazushika, the E Shaggipaddu, translated above, the E ^{d}Pasag-gišku-daḳala^{ki} 'temple of Pasag the weapon (or defender) of Daḳala', E^{d}Amamuge, 'temple of the goddess Amamuge', E^{d}Innanna-zaanka, 'Istar the jewel of heaven', E^{d}Nina papzagkha[2], i. e., 'temple of Ninâ of the fish district', E Damegarra, 'temple which has the lady', E Adamdunterbabílla, 'temple of the new grove at Adamdun'. The *abhal*, or Seer's house, of this temple was in Nina^{ki}, one of the districts of Lagash. There is also a temple known as Diḳalala in Girsu^{ki} (see l. 187—188), probably a place for determining the correctness of measures = *ḳa*, and weights = *lal*, which may have some connection with the Daḳala of Pasag[3].

59. This tablet, like 58, is a list drawn up for the guidance of the official who paid the employees of the temple. In this case, 'at the holy house (*É dingirra*) of the temple of Dumuzi'. The key to this list lies in the signs *Im gìr rug-ga gìr rug-ga É dingir-ra-ta* (l. 94 and 95), which mean; 'clay tablet of income of employees of the *É dingirra* of the temple of Dumuzi'. *Im* = 'tablet', *gìr* = *nita*, Br. 958, *rugga* = 'income', Br. 166. Reisner in RU. 152 has a list similar to this, in which the archaic signs ⊐ and ⊢U— indicate that the workers whose names follow were wholly or half capable. This is proved by the summary, where only the figures following the old signs are given. In this tablet they are, in some instances, used without other following numbers, as in l. 1, 6, 13 33 etc. It is therefore evident that here they express the income to be paid. The constant

occurrence of the signs and seems to indicate that the former is a whole and the latter a half. It follows the common numeration, REC. No. 481, and not No. 492, where = 1/30 of a gur or 10 ḳa. This may indicate that these payments were not in kind but in money, and this is further borne out by the fact that the signs ḳa and gur occur nowhere. If this is not so, then we have here to do with a half gur, or 150 ḳa, and not with 10 ḳa. As a proof we may take l. 28 where we ought to translate 'a half gur and 15 ḳa', the second *maš* being equal to 1/30 of a gur and not the first.

With this explanation the tablet, I think, will be understood. As in the case of the long list of 58, I shall translate only sufficient of this to make its character clear.

(1) ½ (gur) Adda the money lender (or diviner? = *iskim*),
(2) Son of Amarkiazagga, the aged.
(3) 60 (ḳa) Lugibish (or Lugishginar) his son.
(4) Temple of goddess Nina.
(5) The money lender received it.

This means that Adda received a half gur, or 150 ḳa, and that his son received 60 ḳa, as allowances for their services at the temple of Nina.

(6) ½ (gur) Urnina the herbman,
(7) Son of Dugga, the anointer.
(8)—(9) 1 gur. Ur-Ninnizaanka his son.
(10) 1 gur, 50 ḳa Atu, the grass carrier.
(11) 1 gur 30 ḳa Bábána, water pourer of Dada the farmer.
(12) The overseer was Urnina.

(15) Son of Urnina, anointer.
(16) 1 gur, Urbau his son.
(17) 1 gur 60 ḳa 4 shekels Tultapadda,
(18) the grass carrier,
(19) servant of Enkinunerki, the accountant.
(20) 1 gur 30 ḳa Amagula.
(21) 1 gur 20 ḳa Ekhegal, her son.

Thus the tablet names, in succession, a series of persons with varied occupations and the amounts they are to receive. Some were employed at canals or irrigating ditches, *Esagme* (l. 32), such are usually *Arua*, i. e., 'water pourers'. Others were guardians (*Nigab*) at the locks or gates of the canals, as well as at certain buildings (see l. 39 and 43). Some were 'fishermen' (*Šuḫame*) (l. 58) others 'female temple servants' (*Agaam me*) 'who sing' (= *nar*) l. 64—5—9. The signs at the beginning of l. 65 and 67, *igi* + *gunu-a*, are unknown. Reisner thinks they may mean 'a ration', Lau 'a fraction'. The title *Imekida* of l. 70, occurs a number of times in these tablets, and probably means — as Hommel suggested to me — "a cutter of clay tablets". The list from l. 72 to 84 contains the names of 'shepherds who milk' (*sib ga-sur-ra-me*). Then follow five dead men (l. 86—90) who, we learn from l. 93, were fishermen, suggesting a tragedy in connection with their vocation. The last 5 l. containing the colophon already explained, are the only ones on this large

tablet not erased. Why this tablet was erased or how it came to be baked after erasure, is not clear. Possibly it contained mistakes and was forgotten, after being rejected, and thus found its way into the oven.

The date is, 2nd year of Bur-Sin.

60. This tablet is a list of employees at E kharkhara in Sagdana^{ki}. It should be compared with RU 139, Ct 14315 X plate 26, Ct 21355 X plate 32 and JAOS 18, p. 364—365. It was written in the 9th year of Bur-Sin, on the 16th day of *Dimku*, the 5th month, while the Berlin tablet was written on the 13th and Ct 21355 X plate 32 on the 14th of the same month. Ct X pl. 26 was written on the 3rd day of *Šu numun*, the previous month, and the two in Columbia University collection (Text by Lau in JAOS 18, p. 364—365), were written *Dumuzi* 10th and 12th, the following or 6th month. These six texts which, in the main, are duplicates of each other, present a number of variations. I have here attempted no more than a comparison between my text and RU. 139.

There were, as the last columns of the tablets show, ten more employed on the 13th day than on the 16th, and all of these were *mu-ù galu ḫal*, i. e. bakers or cooks. (in Ct X pl. 32 *mu me* is used for these workers). In addition to those thus employed, each tablet mentions 30 men and 3 women at full pay, and 2 men at half pay.

It is remarkable that JAOS No. 1, p. 364 has no numbers before the names, No. 2 p. 365 has *maš* only before two names, and neither tablet has any reference to the *mu me* or the *galu ḫal*.

Col. I is identical in both RU and UDT.

Col. II, Berlin tablet, has *šu* at end of II,14 and lacks title *šum gál*, = butcher, end of II,18.

Col. III, again identical, except the omission of ú in name Ba-ú, = II,2 in Reisner, and the superfluous *ur* in mine, l. 51. There is also one name more on my tablet.

Col. IV. All the new names and important variants are to be found in this col. It will be noted that before the names stands a numeral, either  or . The Berlin tablet has, in addition, four names with the doubled wedge =  before them. These signs mean half, whole or double *wages* as the sign *á* in l. 74 proves. Eight names are in RU 139 which are not in 60, and 1 in 60 (see l. 69) not in 139. 139, IV, 21, also adds, after the four with double pay, *Erim-me, pa Lù-dingir-ra* = 'people of the overseer Ludingirra'.

The following is a translation of the summaries and date;

l. 74. Total of 30 men and 2 at half pay.
„ 75. Total of 3 women.
„ 76. Water jar carriers[1].
„ 77. Total of 4 men for bakers (or cooks) and assistants[2].
„ 78. Present at the revenue house (or mill?)[3].
„ 79. In Sagdana^{ki}.
„ 80. 13th day.

---

[1]) *Ḫe-ku-me* = 'jar carriers'. *Ḫe* = Br. 4062 = *dikaru*, 'an earthen jar' see HWB. *Ku* = *šu* was used in our sense of 'a hand' i. e., one who works, the general sense being *emûku* = 'power', Br. 7169.

[2]) *Galu ḫal* cannot mean *barû*, 'a sorcerer', here, or *šêbu*. *Ḫal* = *garâru* 'to run', people who carry the food to and fro, perhaps.

[3]) *E ḫar-ḫar-a*. *Ḫar-ḫar*, Br. 8586, *ḫubûlu* = 'taxes, interest, rents, revenues'. At the house of revenues. This is not only the natural meaning of the sign, but suits best a tablet recording payments. The people, apparently, came daily for their pay, as we have records of the 13th, 14th and 16th of the same month. I am aware, of course, that *É ḫar-ḫar-a gub-ba* may be translated 'present at the water mill'.

l. 81. Month Dimku.
„ 82. Year the lord (= high priest) of the god Nannar-
„ 83. kar-zid-da was invested.

The question now arises, were the people mentioned personally present in Sagdana to receive their pay, or were they represented by an official, generally the *pa*, and was this, like 58 and 59, merely a list drawn up for the guidance of the paymaster. In favor of this we have the frequent mention of the *pa* at the ends of groups of names and, in one case, RU. IV 21, such a group is called *erim-me pa Lù-dingir-ra* 'slaves or people of the *pa* Ludingirra'.

l. 28, 57, 65 and 77 are explanatory of preceding groups. Their meanings seem to be:

l. 28. *Šag-igi* + *gar-ma*. 'Inside workers'?
„ 57. *Giš-ku e tub-ba me*, 'guards and acolytes'.
„ 65. *Ḫe-ku-me*, 'jar carriers' (women, see l. 75 and 76).
„ 77. *Mu ù galu-ḫal*, 'bakers and men who run' (waiters?).

These occupations are partly religious and partly secular, the first group being engaged in field work and the second in temples, the fourth in kitchens, one woman being a water carrier for each group.

If, now, we consider the occupations of these people which, in nine cases of the first group are given, we find they were; a fisherman, a gardener, a singer, a weaver, a singing priest, a paymaster, an herb seller, a garment maker and a flour carrier. In the second group there were a butcher, two major-domos, a supervisor, a herald and two merchants. The last group had, beside others, a major-domo, a barber and a carpenter. From this group were taken the four men for cooks and their assistants. It is, of course, just possible that these people were being paid for work in their own vocation, in the interest of a temple or municipality, but it is not probable. It seems most likely that they were taken from their own proper business to do some work for the community, and that the titles are means of distinguishing them from other individuals of the same name. So far all seems clear; but how shall we account for these two lists (not to mention the other four cited) of practically the same individuals, with an interval of only three days between them? It looks as if a system of daily balances was then in vogue.

61. Sheshkalla, Urnina, Meshkigalla, Urgar, and Urninmar^{ki} each receives half pay from the paymaster. The signs l. 15, *id-daḫ-ḫa*, mean 'helpers'.

The name in l. 8 Meshkigalla, 'priest of the lower world', 'or priest of the disc of the moon', is interesting. So also is the title in l. 12, *pa muamaśg* (or *ku*) 'overseer of mothers, or 'mothers of wool'. The last sign is doubtful. The translation 'helpers' for *id-daḫ-ḫa* is based on the *daḫ* value of *gaba*, being the same as that sign doubled. See Br. 6579 *id-daḫ* = rêṣu. HWB. 615 = 'helper'. *Ḫa* is a phonetic complement.

62. This is a transaction of the granary Ashagebilli and the cultivated fields of the god Galalim. The conveyancer was Urkal, son of Luenzu. 1479 gur, 260 ḳa of grain (barley) and 4 gur, 240 ḳa of *ash* (hemp) were distributed as follows:

935 gur 'to the granary Ashagebilli', signed for by Urkal, son of Luenzu.
240 gur, 'seed-grain for the fields of Ebilli'; signed for by Urgula, son of Gani.
315 gur, 180 ḳa, 'a cargo', signed for by Siru, the Ab.
19 gur of grain, 'food for husbandmen'.

4 gur, 240 ḳa 'of *ash*, seed-grain for the swamp fields', signed for by Urkal, son of Luenzu.

Now follows (l. 18) the total of barley 1200 + 300 + 10 gur, 120 ḳa and (l. 19) 4 gur, 240 ḳa of hemp, distributed (*zig-ga*), after which the remark; 'Excess' (*dirig*) '30 gur 160 ḳa'. Subtract now the sum of l. 1, 1479 gur 260 ḳa, from the total in l. 18, 1510 gur 120 ḳa. We obtain the result (l. 21), 30 gur 160 ḳa or  plus 40 ḳa.

It will be seen, however, that the accountant made an error of 240 ḳa in the sum of barley items, the actual amount given out being 1509 gur 180 ḳa and not 1510 gur 120 ḳa. The excess chargeable was therefore 29 gur, 220 ḳa and not 30 gur, 160 ḳa, as the tablet states. Note upright wedges with *gur* (l. 7).

Note *ash*, the grain in l. 2, 14 and 19. It is seed-grain, to be sown in Ashagsug, name of a swampy, or marshy field. If it were pistachio nut, as some think, it would not be sown like grain, in this case fully 3000 pounds of it. Moreover, pistachio grows on a small tree.

This cereal, *ash*, often occurs in the contract tablets. It has, aside from its primitive pictograph (a plant?) several meanings which point to the intoxicating properties of hemp leaves and resin, e. g. *ḫašâḫu* (Br. 6747) 'want, need'. *Ṣibûtu* (Br. 6751) 'longing, desire'; *arratu* (Br. 6745) 'curse'; *deššu* = *šamû*, 'burn', Br. 6753. Hemp has been cultivated in Syria, Persia and Northern India from time immemorial. It is mentioned by Herodotus (IV 74) and other classic writers and was valued for its fibre, as an intoxicant, and for its seeds. As an intoxicant, for smoking and chewing, it is now used in India, Persia, Syria, Turkey and other Oriental countries under the names *bhang*, *siddhi* and *ḥashish*. The similarity of *khashâkhu* (Br. 6747) = 'want, need' for *ash*, to *ḥashish* is certainly very striking, and when we consider the feeling of longing and want which the use of the drug begets, there seems little doubt that in the *ash* plant we have to do with hemp. Its meaning of 'a curse' may be derived from the effects of its habitual use, or from some religious use to which it was put in the temples. In the *ash* we very probably have, not only a plant whose fibre was used for ropes, bags, sail-cloths, etc., whose seed was used as a cereal for cakes, then as now, but the religious intoxicant which, like the *soma* of the Hindus, the *wine* of the Greeks, the *beer* of the Germans, the *pulche* of the Aztecs and the *chicha* of the Incas, was, originally, a necessary concomitant of certain religious ceremonials.

The tablet is dated; 2nd year of Bur-Sin.

63. Urnigingar, Luabu (Lueššam?), Urnina, and Lumer, farmers, harvest and bring together crops of grain and *ash* (hemp). The farm (*gan-gud*) belonged to Urnina, the overseer of oxen. The foreman (*pa*) was Urtur. The oxen belonged to the god Dumuzi. The total grain was 422 gur, 255 ḳa. The total hemp was 38 gur, 190 ḳa. Instead of the month and year the tablet ends with; 'The grain collected has gone forth, (at the) field of its gathering the collection was made.'

This is a beautifully written tablet. The signs are perfectly made, and a model of their kind. The first *ḫab*, l. 20, may have the value *kūr* = *rakâsu*, 'binding'.

64. In the 50th year of Dungi, Nikalla, the provision master, (*pa-al*) transacted the following business. From a total possession of 1697 gur and 175 ḳa of best grain, grain of the cultivated field, a gur of grain per heifer is taken (*ba-til*): Urdam, son

of Urnina, received (*dub*) 1266 gur, 215 ḳa, and, as rations, 131 gur, 70 ḳa. Urkal, son of Melukhkha received 60 gur, 160 ḳa, and Gudea, son of Urbau received 69 gur 200 ḳa. The total given out (*zig-ga*) was 1528 gur 45 ḳa. (Leaving a) remainder of 169 gur, 130 ḳa.

65. This tablet seems very simple, and yet it is not clear. The totals in l. 9 and 19 are each followed by what appear to be names, after which the expected *shu-ba-ti* does not appear. l. 21 and 22 are a brief note and temple name. 'Seed-grain, cattle-food, wages for hiring, temple of Ninmar^{ki}', but nowhere else in the tablet is there any mention of cattle-food. It is just possible that the *še-numun* or 'seed-grain' was in this case used as cattle-food for the sacred oxen of the goddess Ninmar^{ki} for whom nothing would be too good; but this is conjecture.

The text is a good example of the vagueness of some of these Ur tablets. Two groups, or consignments of grain are mentioned.

l. 1. 304 gur best grain.
„ 2. Seed-grain.
„ 3. 64 (gur) wages for hiring.
„ 4. Of this amount.
„ 5. 208 Gur (of) the field Gidakh
„ 6. from the priestly accountant of the goddess Ninmarki.
„ 7-8. 160 gur from Luningirsu, son of Urnina. (Total) 368.

It would seem from this that the grain mentioned in l. 5 and 7 was afterward classified as in l. 1 and 3, 304 gur of seed-grain and 64 gur as wages for hiring, but, though this classification of the grain must have taken place afterward, it is mentioned first.

l. 10. Luurusag probably received or was *gìr* i. e., conveyancer for, this consignment. At this line begins a second consignment.
„ 11. 294 gur, 150 ḳa of seed-grain.
„ 12. 62 (gur) wages for hiring.
„ 13. Of which amount
„ 14. 103 gur, 150 ḳa New Temple.
„ 15. 233 (gur) the field Gidakhkha (i. e., the field that yields double).
„ 16. From the accounting priest of Ninmarki.
„ 17-18. 20 (gur) from Luningirsu, son of Urnina.
„ 19. Total 356 gur, 150 ḳa.
„ 20. Urgula.
„ 21. Seed-grain, cattle fodder, wage for hiring.
„ 22. Temple of the goddess Ninmarki.

In the second consignments the same persons bring in the grain as in the previous one. L. 14 however, adds the New Temple as a place from which some of the grain came, and there is another recipient, Urgula. There is no *zig-ga*, or *gub-ba* in the tablet; i. e. 'expended or present'. But as seed-grain and wages are mentioned, it is likely that the meaning of the whole is:

Two officials, a priest-accountant of the temple of Ninmarki and one named Luningirsu, collected grain from several places, in two lots which were handed over, partly to Luurusag and partly to Urgula, to be divided as seed-grain, cattle fodder and wages for hiring, in behalf of the Temple of the goddess Ninmarki.

There is no date and the whole is a memorandum for a ledger account like tablet 68.

This result corresponds exactly with the total in l. 98 and 99 i. e. 1 great gur, or karu, 3279 gur and 40 ḳa. The great gur was equal to 3600 common gur.

The inscription now informs us what was done with this grain. It was put into five storehouses whose names are given, after which came the names of the men who received the rations for the workingmen, and the amount each received. From all this we see that this tablet of 6 columns and 106 lines is the record of a harvest gathered from certain fields belonging to the temple of Nina in Lagash. The name of the *apin* or 'farmer', in charge of each is given, as well as the amount it yielded and the rations required for the *uku-il* i. e., 'the labourers' (literally people who carry). The names of three irrigated districts (*ashag*) that included all the farms and fields are also given.

The most interesting portion of the tablet is in Col. V, l. 76—89, where we are given the names of five granaries, and the quantity of this harvest stored in each. The addition of the separate consignments sent to the granaries included all the grain

harvested, which amounted to 6,879 gur and 40 ḳa i. e., 4,471.436 lbs. if we allow the ḳa to equal 2 1/6 lbs. or a kilo. In brief, 22.814 barrels of grain.

From this tablet we can see that the *gan-gud*, generally translated 'cultivated field', often included many other smaller tracts. It may not be amiss to translate it 'farm'. The term *ashag* in l. 38, 51, 56 &c. includes several farms, and means 'a watered section' (Br. 7991) puḫru = 'collection'. Numerous small fields are included in the 7 *gan-gud* and these again form parts of 3 *ashag* or estates. The names of these estates and granaries are often descriptive. Thus,

l. 39: *Ashag Armunara*, i. e., 'the field which has brought light'.
„ 78: The granary *Igi-gál*, i. e., of wisdom (= *hasîsu*).
„ 80: The granary *Sag-dū*, i. e., of judgement (= *tašîmtu*, Br. 3592).
„ 82: The granary *Ea-bíl*, i. e. 'The new Ea granary', or 'new house granary'.
„ 84: The granary of the 'smiting (*a-ka-ḳa* = *a-ka-ga* Br. 11404) of the field where the serpent spoke in Eden'. *A-šag muš-bi edin-na.* The sign *bi* here (Br. 5124 = *ḳibu* = 'to speak'). This should be compared with Ct. No. V, pl. 36, III, 4 and 5, where *ašag* is omitted and where the translation is: 'Granary of the smiting of the serpent that spoke in Eden'. *Muš* or *ṣir* is a serpent no doubt; *bi* may = 'its', i. e., its serpent. *Edin* Br. 4528 = *matati* = 'a collection of fields'. Also see HG, p. 258, note 1, for *edin* as a proper name. See Dec. 30[bis] nr. 16[b] for [d]*Edin-mu-gi* and *kalab-*[d]*lugal-edina.* See also PKUN p. 168 and note 9 for a number of instances.

From all this we see that *edin* in names indicated, as a rule, a sacred locality. This text points to a very early tradition of the serpent of Eden.

The fifth and last (l. 88) is the granary Bár-si(g)-ga, i. e., 'granary of the full or the lofty sanctuary'. The amounts stored in these granaries were:

In addition, Urninkhadda of the temple of Dumuzi received for the labourers and water carriers, 6 gur, 100 ḳa, and Abbamu received 18 gur for the same purpose, i. e. as rations, which were divided as shown in l. 8, 12, 17, 22, 28, the sum of which is 24 gur, 100 ḳa, and exactly equals the total given by the addition of these two. L. 101 tells us the grain was gathered (*ḫab-è-a*) by Urénninnu, for the temple of Nina in the year after King Dungi destroyed Urbillum, i. e. his 56[th] year.

67. This is a list of 22 lots of various kinds of grain to be paid in Girsu to a variety of employees. It was drawn up in advance. The erasures of the numerals of l. 33—36 and what corresponded to these in the total (l. 58 - 59) is a proof of this. Tablets could be kept in a fairly moist condition to permit such erasures for days before baking. As Urbabi and Urkal did not appear, their allowance was erased.

The sum of the 22 lots amounts to 1642 gur, 20 ḳa. The grain was to be paid (*lal-ni* [l. 60]) in Girsu, in the first year of Bur-Sin. The chief of the weavers, several

persons with the title *dudu*, i. e., 'one who brings' such as sailors, muleteers etc., some fishermen and even the son of the Patesi are to have part of it, but a certain Mani (l. 22) is to receive more than half of all the grain, 828 gur, 190 ḳa. As, in our measure, this would be about 12,726 barrels, we wonder what he was to do with it.

The grain was of different kinds; beside the *še lugal* which was barley, 140 gur of *áš* was to be sent (*du-du*) to the temple of Innanna.

In l. 26 occurs a grain called *gir-gir*, which Reisner says is thorn. This cannot be correct, as no part of the thorn yielded a grain; but it may have been rye or oats whose *ears* had sharp points.

Suggan in l. 27 seems also to be the name of a grain as yet unidentified.

L. 32 I cannot decipher. We seem to have *še dar a-ter-ra*, the grain is surplus of the house (*ter* = *šubtu*). Or there is an excess of 60 ḳa of grain in the house. It has been suggested that the proper reading is *še zid a-tir-ra*, 'rice meal', or something of the sort. The line is written on an erasure.

What the crosses in l. 18, 26 and 43 mean, unless to call attention to an unusual item, I do not know. Perhaps checked off as paid.

The father of Luningirsu was l. 58 probably the Patesi Urkal II, though he does not appear as such in the lists.

The count:

	1642 Gur, 20 Ḳa	

This result is in exact agreement with the total given in l. 58 and 59, except 2 gur, accidentally erased with the erasure of the numerals in l. 33—36 and their equivalent in the total.

68. Less than a half of this tablet remains, but this, fortunately, contains the colophon and tells us the nature of the transaction. It is a transaction in flour, or meal, conducted by Urgalalim, the son of Luningirsu, during two months, Shu-numum and Dimkù, i. e., the 4th and 5th in the 56th year of the reign of Dungi, for the account of Urkal the Patesi of Lagash (see l. 156—57). The amounts are not very large, rarely exceeding 300 gur in any single consignment, and the sum of almost the whole obverse, perhaps 50 items, when complete, amounted to 2762 gur, $105\,^2/_3$ ḳa, $8\,^2/_3$ shekels (l. 70—1). On the reverse we have another summary of 1033 gur, $200\,^1/_3$ ḳa, and there may have been another between l. 100 and 101.

It is probable from these facts that we have here the items of a tax gatherer. In this case the signs *bal-bi* in l. 53, 105, 113, 135 and particularly in l. 163, are to be translated, 'the tax' of Urkal the Patesi.

A number of not unusual business formulas occur as, in l. 3, *si-ni-ib nin-šid-ag*, 'remainder of a (former) transaction'. In l. 18, *dub-bi-3-a-an*, 'his third seal'. In l. 73, *sag-nig-ga-ra-kam* 'capital of the possession', i. e., total of all amounts. In l. 101, *a-ka-a mal-mal* which Lau translates, 'a partial payment, or delivery, agreed' (OBTR. p. 37) and in l. 156, *Nin-šid-ag-zid-da*, 'a transaction in flour'. In l. 111, after a total of so and so much pure bean flour, *anšu-muk* occurs. It means 'asses locked up', probably for breeding purposes, and this bean, or millet flour, may have been fed to them, especially at such a time.

We have in this tablet lastly a variety of grains, meal and bread.

Še, probably 'barley', l. 2, 30, 43 etc.
Še-zid-gu, l. 45, 'ground bean grain'.
Ba-ba-še, l. 52, 'cracked grain'.
Arzana, l. 10, 16. (See Arabic أرز, rice.)
Du, l. 69. 'Common grain?'
A-ter šig, l. 61—2. 'Rice? purified, i. e., peeled.'
As *ter* means forest, it may have been a forest product like walnuts.
Zid še, l. 7 etc. 'Flour of barley.'
Zid kal, l. 6, 13 etc. 'Flour of fine quality.'
Zid ba-ba-še, l. 77, 104, 'meal of bruised grain'.
Zid-ba-ba, l. 57 and 91, „ „ „ „
Zid-iš-ba-ba-kal, l. 97—8, 133, 'meal of broken up *iš* of fine quality'.
Zid še sa, l. 63, 78, 119, 'meal of *sa* grain', a kind of millet.
Zid gu uš, l. 70, 'ordinary bean flour'.
Zid gu šig, l. 50, 111, 'selected bean flour'.
Zid gú nunuz, l. 58, 'flour of fresh (green) millet'.
Gar-zid, l. 122, 'flour bread'.
Gar-zid-kal, l. 84, 'bread of the finest flour'.
Gar-zid-gu, l. 87, 'bread of bean flour'.
Gar-zid-aš, l. 83, 'long (*aš*) loaves'. *Aš* = ►
Gar-ḫar-ra-šig, l. 56, 108, 'a sort of biscuit, prepared, pure', or good.

69. This is a record of 16 oxen, 5 cows, 5 asses, 1 mule, a male and a female calf — 29 in all, belonging to Urutu, son of Urkal, and the god Dungi.

Urea, Alla, Urenzu, Lumene and Khamazizi bring them. They are received for Urutu by his overseer Nabashag, and for the god Dungi by Urshugalamma, in the second year of Bur-Sin.

Of these 29, 6 oxen, 1 cow and 2 asses are *rug-rug*, i. e., 'increase or pay' of farmers and overseers of oxen. Whether or not we are to understand that *im-ma* in l. 3 and 18 is an official is not certain. *Nu-zu* (l. 3 and 18) may = *nu-su*, 'without the hide'?

Note *kam* at end of l. 34 = *dub-bi*.

70. A small tablet without names containing two items of outlay of grain on the 24th and 25th of the month Shegurkud (the 11th). 25 cows two years old receive each 3 ḳa a day (about $6\,^1/_2$ lbs.) of grain. The total consumed each day is 75 ḳa. 41 lambs receive 1 ḳa a day each, or 41 ḳa each day.

70A. 180 sheep killed and dressed. From Urru. Akalla received them. Month of Kurue (i. e. 11th), Dungi, 46th year.

Seal: Akalla, scribe, son of Urnigingar, the *Ish*. The date formula differs somewhat from that published in B. E. 1:2 125 R.15.

Bar-gâl = *gallâbu*, 'shorn, dressed'?

This tablet was aequired in New York in 1913. Probably from Jokha.

71. This tablet is similar to 69 in size, color, material and contents, and it was written by the same scribe, with numerals archaic, except in case of the *rug-rug*, the *zig-ga*, and *lal-ni* counts (l. 5, 6, 9, 24, 25, 27). The *rug-ga* counts, l. 4 and 23, where the ox goes to the *pa-al* or 'priest in charge of the provisions of the temple', have, on the other hand, the old numerals which shows that *rug-rug* and *rug-ga* differ in meaning. This confirms Reisner's view; that the archaic numerals indicate the animals actually present only, the others those which have been paid as wages or used as provisions. The former is expressed by *rug-rug* = *rud-dû* = 'increase', i. e. pay; the plural form signifying that the value is to be divided among a number, such as the overseer and his assistants, or several officials, as in tablet 69. *Rug-ga* is the single sign with phonetic complement proving the value to be *rug* and not *su*, and used in the same sense. The meaning is probably that the live animal was to be delivered to the *pa-al* as income of the temple. As this *rug-ga* item is in archaic numerals, it shows that the animals were present, but intended for the purpose above indicated.

The numerous erasures on this tablet, and the hurried nature of the writing, make it rather difficult to read. Indeed, it seems that the whole tablet is a palimpsist, remains of the former inscription appearing in numerous places. l. 27 read; *gi gud-giš si-rú ab*.

The animals were cows, oxen, a female calf, male and female asses and an ass's foal. There were apparently 40 in all. Four of the oxen were 'increase of farmers' and others, and two were added to the provisions of the *pa-al*. The farmers were Utumu, Lunina, Lugalganni, Siru and Emunidu. The cattle were from Igishagshag. The overseer was Lumene. l. 33 tells us that the plow oxen present were the oxen of the god Dungi. And l. 35 that 'Lugaldibbu received them' in the 2nd year of Bur-Sin.

72. This is a tablet of appointed daily allowances for sheep. The number of sheep is given, and the amount allowed for each, namely $1\,^1/_2$ ḳa, then the name of the man who received the grain and had charge of the sheep. At l. 15, 30 kids receive $^2/_3$ ḳa

each, i. e., 20 ḳa for all. Then follow the words *sa dug* which here means 'regularly appointed *allowances*'. This is proved by what follows; '63 lambs over and above' (*dir*) (these regular allowances) 'received 1 ḳa each, or 63 ḳa'. 26th day, 12th month.

73. This tablet is important because it verifies several points that have, heretofore, been surmised only. It is a perfectly clear and correct record of 10 flocks of sheep and lambs under as many shepherds. The total number was 1515. In the first flock were 48, i. e. 13 ewes, 20 male sheep and 15 lambs old enough to be shorn. The flesh of one unshorn lamb was wanting. The expression *rugga* shows it was eaten, or taken as a tax.

The second flock contained 109 sheep, ewes, large sheep (*udu-gal*), male sheep, 1 male sheep in a hedged enclosure (*bar-šar*), 9 shorn lambs and 1 unshorn (wanting).

The third flock comprised 416 of the same varieties of animals, to which is added a note: *Sag-uz šu síl nu-ŭr*, 'a goat was chosen for an unshorn lamb', i. e., exchanged.

In the fourth flock were 41. In the fifth, 73, of which 1 male sheep was set apart (*bar*) as tax or income (*rug-ga*). In the sixth, were 74. In the seventh, 336. In the eighth, 48, one male sheep being 'in a hedged enclosure' as in the case of the second flock. In the ninth 70. On the left edge of the tablet we learn that the tenth flock of 300 consisted entirely of unshorn lambs, and that the 'sheep shearing' (*udu ba-ŭr*) took place at Guabbaki in the 58th year of Dungi. 'Wanting' before *síl nu-ŭr*, in all but the last count, is understood.

73 A. 60 ḳa of white onions. 30 ḳa of large millet, 30 ḳa of small millet. 30 ḳa of *lù* grain, for seed from Gududu. Lugalazagzu received them of the field Guedinna, in the 9th year of Gimil-sin.

Seal: Gimil-Sin the mighty King, the King of Ur and of the 4 quarters of the world.

Lugal ..... the scribe, son of Ur ..... (thy) servant.

74. Abillum delivers 90 sheep skins for 2 gur of wine. The shepherd of the god Ningirsu swore he received it in the 56th year of Dungi.

75. This is a report of the condition of a flock of sheep at Kinunerki in charge of Lubau, in the second year of Bur-Sin. 160 were present, consisting of 41 ewes, 95 male sheep, 10 female lambs, 9 male lambs and 5 leading goats (*máš-sag*). 480 ewes and male sheep had been sent away. 26 ewes, male sheep and lambs were snatched away (by wild beasts or robbers). *Lal-ni* (not accounted for) 2 male sheep.

In l. 9 and 15, is the sign *síl* without a numeral. This does not mean one lamb in either case. The count is correct without these lines. The scribe wrote the signs for the animals before he wrote the numerals.

l. 5: Five 'head' kids may mean as Radau (EBH. p. 348) suggests, weaned kids; but as goats are still used by primitive people to lead flocks of sheep, *máš* may mean 'goats' and *sag*, 'chief' or 'leading', or, as *sag* means, among other things, 'to choose', 'five choice kids'.

76. This is the record of a sheep-shearing (*udu-ba-ŭr*) at Guabbaki in the 58th year of Dungi.

Lugalkagina, son of Khumzi had 22 sheep,
Urmesh, son of Igimunishig „ 59 „
(Ur)nimarki, son of (Igim)unishīg „ 14 „

These are apart from the shorn lambs and sheep in l. 2 and 15.

In l. 5 we have 1 *ganam bar rug-ga*, i. e., 'one ewe enclosed for tax'. In l. 9, *igi* + *ku-ám* means 'the former' (old) or original flocks to which, what follows is added. l. 17 it was, no doubt, intended to erase entirely. The *bi* has no meaning here.

It will be noticed that this sheep shearing, and that of tablet 73 took place at Guabba^{ki} in the same year, 58th of Dungi, but here it took 9, there 4 days. I translate thus, instead of 9th day and 4th day, because no month is mentioned in either tablet.

77. This is an audit of a flock of goats at Kinuner^{ki} of Nina^{ki}. Year, Bur-Sin 5th.

48 mother goats, 26 does, 11 large kids, 29 male goats, 37 kids, (*šag dug*, festal i. e. fit for sacrifice). 5 male goats chosen for the mother goats. (The count shows we must translate *sag*, 'chosen' here.) Total 156 were present. 10 mother goats and 9 male goats were removed. Of the kids 'fit for sacrifice', none were wanting. Naana had charge of the flock. Šag-dúg = ṭub libbi = joy of the heart.

78. Is another audit of a flock of sheep of which 481 were present; 9 had been removed and 59 snatched away (by wild beasts or robbers). None were (*lal-ni*) 'unaccounted for'. The sheep were in the care of Urnina. The count took place at Kinuner^{ki} in the 2nd year of Bur-Sin.

The large number that were taken away by violence suggests a raid, such as the Bedouin of the present day are apt to make.

79. This is also a count, or audit, of a flock of sheep in charge of Urnina, son of Lumer, the city father, and stationed at Girsu^{ki}, in the first year of Bur-Sin.

142 sheep were present, and 25 had been removed.

As we see from l. 6, there was one male sheep more than the number required of the shepherd. The only matter that calls for comment in this tablet is found in the last two signs of l. 1. The line reads: 41 ewes, 13 male sheep *sag ganam*. It is hardly probable that 13 male sheep would be exchanged for a ewe, so we must translate *sag* 'leader', and the phrase 'leaders of ewes', i. e., they were rams — as the meaning, *sag* = *arum*, 'attack', shows. It is probable that 77 : 6 must be translated in the same way.

80. Audit of a flock of sheep at Guabba^{ki} in the 1st year of Bur-Sin, in charge of Urshagga the Ab. 15 were present, 2 removed, and 29 were wanting, three male sheep of these being *rug rug*, i. e., compensation of the *Im-ma*. *Im-ma* may, however, be a verbal form meaning 'is' or 'being'. *Lal-ni* counts, in these tablets, were usually legitimate expenditures paid out (*lal*) for support.

81. This is a tablet of allowances to envoys and their attendants. The *sukkal*, or envoy, usually had with him a courier (*galu-rim*) and a conveyancer (*gìr*) who also bore the title *galurim*, as well as a number of men who, no doubt, acted as guards. These companies travelled between Lagash and various places such as Ur, Susa, Gisha and Kimash. They were often delegations from the king at Ur, going to Susa and stopping over at Lagash. During the stay they were furnished with provisions and again when they continued the journey. With this explanation the tablet will be clear. Enua, the envoy, going to Susa (received) while in the city 2 ḳa of bread and, for the journey, 5 ḳa of bread. Shudumuzi, (his) courier, had 2 ḳa. An allowance of 1 ḳa of grain meal was made for the men of Gisha. The conveyancer was Shudumuzi, the courier. They came from Gisha. Akhuma, the courier, received 2 ḳa of bread. He came from Ugishgala^{ki}.

The next few lines are incomplete on account of a piece broken from the tablet. From l. 18 on we have:

Shudaamar the envoy (had) 3 ḳa of bread while in the city, 5 ḳa of bread for the journey. 2 ḳa of grain meal was the allowance of the Kimash men. Shudaamar the envoy was (also) the conveyancer. They went to Kimash.

Lanimu and Barum, couriers, (received) 4 ḳa of bread. They came from Susa. On the left edge; 3rd month.

It is probable provisions were given by each place, at which these envoys and couriers stayed, for a day's stay at the place, and for a single day's journey. This was a government charge and records may have been kept, in order that these expenditures could be deducted from the taxes or tribute.

82. This is a record of allowances to five envoys who came from Anshaan, an Elamite city, in the month Ezen-dumu-zi (6th). All, except the last, received 5 ḳa of beer (or wine), 5 ḳa of bread and 1 agam oil. The last received but 3 ḳa of drink, 2 ḳa of bread and 1 of oil. From RU 164[13] O[14] we see thal *ni agam* was an oil put up in copper vessels of 4 *gìn*, or shekels, each. If a Babylonian *še* equals our grain, this amounted to an ounce and a half. From this it would appear that 𒄿 with oil, means not 1 ḳa, or half a gallon, but one *urudu á-gam* or copper box holding 4 shekels, unless ḳa or *gìn* is specified.

83. Shugugun, the garment maker, sends an offering on the 2nd day of the 11th month, in the third year of Bur-Sin, by the conveyancer Nishag, a messenger, 6 ḳa of *du* wine, 4 ḳa of bread and 8 shekels of sesame oil. Nishag received (probably as support for the journey) 3 ḳa of wine, 2 ḳa of bread and 4 shekels of sesame oil.

This form of the 3rd of Bur-Sin is exceptional. *Du* or *gin* for *dím*, the last sign, must be a scribal error.

84. This is a tablet of allowances for two parties, one of which went to Magan in Arabia and the other to Susa in Elam. If I am right in my reading of the verbal form in l. 3, the allowance, for the first journey at least, that to Magan, was for thirty days at the rate of 5 ḳa of wine, 5 ḳa of bread and 2 shekels of oil a day for Burniigga and 3 ḳa of wine, 2 ḳa of bread and 2 shekels of oil for Akalla, who accompanied him. They were sent by Suudu, probably on a mercantile expedition, as no titles are mentioned; though we should expect *damkar* in that case.

We then have the allowance of the royal paymaster, 6 ḳa of wine, 4 ḳa of bread and 4 shekels of oil, followed by Anatil, a spearman, with 3 ḳa of wine, 2 ḳa of bread and 2 shekels of oil. Next, Aḫuni again with 3 ḳa of wine, 2 of bread and 2 shekels of oil. These (*ne-ne*) went to Susa.

The supplies were given out on the 12th day of the 6th month. It is probable that we are to understand that the royal paymaster, accompanied by a guard and two assistants, went to Susa on public business. Susa was in subjection to Ur at this period.

85. This is a tablet of allowances to 18 or 20 people (whose names are given) of wine, bread and oil. The latter, though the number of shekels is given, is not mentioned before l. 18. l. 3 and 17 seem descriptive rather than names, the latter meaning 'the master of a ship that brings burned brick'.

86. Rations or allowances to five soldiers, Urbarsigga, Shuna, Tiltil, Dudu and another whose name is broken off. Each of these received 2 ḳa of wine, 2 ḳa of bread and 2 shekels of oil. In the 6th month, Dungi 56th year.

87. This is an imperfect tablet of allowances for a Patesi, probably of Susa, and his company. He received 15 ḳa of bread, his paymaster 5 ḳa, two of the lesser officials 2 ḳa each and one, a keeper of birds, 2 ḳa of bread and 2 of wine, the only one who received wine. The provisions went forth on the 29th day of the 4th mo.

88. Bashaili, Shuu the envoy and Luim each received 5 ḳa of wine, 5 ḳa of bread and 4 shekels of oil in the 3rd month of Bur-Sin 7th.

89. This tablet of allowances is very small and written in minute characters, but with the exception of l. 4, where there seems to have been an attempt at erasure, it is clear.

Bititi, the envoy, received 10 ḳa of wine, 5 ḳa of flour and 1 of agam oil, then follow (l. 4) the signs *erim lul*, which may mean 'to war' or 'to battle' he went, or it may be a name. For Ludamu 5 ḳa of wine, 3 ḳa of ..... and 1 of agam oil (who with) grain of the chief envoy went.

Urutu, the envoy, received 5 ḳa of wine, 3 ḳa of ..... 1 of agam oil. The provisions went forth on the 12th day of the 2nd month.

90. Lunannar (received) 3 ḳa of wine, 2 ḳa of bread and 4 shekels of oil. Bashaeshdar, the cup bearer, 8 ḳa of wine, 5 ḳa of bread, 10 shekels of oil. Three partial lines which I cannot complete follow, then Lugalazida has (3) ḳa of wine, 2 ḳa of bread, 2 shekels of oil. He came from Ludingirra. Shuim had 3 ḳa of wine, 2 ḳa of bread and 2 shekels of oil. The paymaster was Lugaldaraa. The (provisions) went forth on the 7th day of the 9th month.

Attention is called to the comparatively large amount received by the cup bearer (*ḳa-šu-gab*), as showing the importance of his office, and to the name of the paymaster, Lugaldaraa, the sign *du* having evidently the value *rá* here.

91. This large tablet of 397 lines, of which about three-quarters remains, is of unbaked clay. The signs are very small and cramped, and were often difficult to decipher. Unfortunately, the part missing contains the purpose, date and other particulars as to the individuals who received, and the place to which the animals were consigned. We may venture the conjecture that the place was the great temple of Ellil at Nippur. As this list is a record of animals sent during a single feast, *Á-ki-ti* (l. 74), which amount to 3569, and yet these were not all, we can realise the magnitude of the sacrifices at this cult centre.

They consisted of 4 classes of animals; — asses, oxen and their kind, sheep and goats. These were subdivided into 26 classes according to sex, age, size, color, feed and place of origin. The *anšu*, generally translated 'asses', were of a powerful variety (*zi-zi*) and may have been horses. Among the cattle we find, beside oxen, cows and calves, the wild ox (*am-gud*), l. 386. Among the sheep, of which there are three classes of ewes, five of sheep in general and three of lambs, we note the *'u-ḫul* (l. 353), corresponding to the *gukkal* among the lambs, which were probably set apart for sacrifice.

There are 7 varieties of goats and kids if we, with Langdon, include the *maš-du* which may have been tamed gazelle.

The tablet contains 149 names of people who either brought or sent the animals. In several instances great numbers of valuable animals were sent by potentates such as Patesis. In others, an offering is made of a single lamb or goat. These names will be found in the name lists with notes calling attention to interesting facts connected with them. Semitic names occur occasionally, and I call particular attention to *Maḫaṣu*^{ki} (l. 341), *Giš-mar*^{ki} (l. 337) , ^{d}*Adad-ilu* (or ^{d}*En*?) (l. 317) and the name *Lù-ri-ḫu-mar-tu* (l. 354).

92. This is a tablet of offerings of sheep, kids and oxen to various deities and cult objects, such as Nannar and his spouse Ningal and the thrones of Dungi and Zikum. Offerings are also made for other objects and privileges as in l. 11 which is a reference to marriage rites. With some of the groups the name of the 'forwarder' (*gìr* must mean this) and that of the courier (*maškim*) is given. The offering is often followed by the deity, cult object, or purpose for which the offering is made, as in this tablet, but in many tablets by the name of the donor.

The animals were taken from Abbashagga who, in this instance, was at Ur (l. 42). The conveyancer was the scribe Lushag, and the animals went forth on the 29th day of the 12th month, in the 8th year of Bur-Sin.

As the gods of Nippur, Enlil and Ninlil are not mentioned on this tablet, but the Moon God and his consort are, it is probable that all these animals were intended for the new-year's festivities at Ur. Whether this Abbashagga is the great cattle merchant who appears so often at Nippur, being at Ur to meet the wants of the festival, cannot be said; but he is very probably the same, as this tablet came from the archives of Drehem to which it was taken from Ur.

The tablet contains a number of new names, both of individuals and places. Nituk^{ki} (l. 29), we know to be Dilmun; according to Hommel, the Island of Bahrein in the Persian Gulf; but where were Rimush^{ki}, Mardamaan^{ki} and Shanum^{ki}?

93. Ennia, the driver, sent by Isharramash 3 sheep. The conveyancer was Ursharrugim the envoy. 1 ox, 51 sheep, 26 goats cut up for the (temple) kitchen (*É-mu*) Urumu was the courier. 25th day. Taken from Abbashagga, 9th month, Bur-Sin, 2nd year. Left edge 60 + 20 + 1 = 81 (animals).

Šu-gid (l. 7) Langdon translates 'inspected,' but *gid* may mean *bagâmu*, 'to cut asunder', i. e., the animals were slaughtered and cut up.

94. 2 cows, 2 oxen, and 646 sheep, ewes, lambs and goats are offered by various persons, among them (l. 1) Ḫabalule the patesi of Adab, in the 10th month, 2nd year of Gimil-Sin.

Notice  following *dub* on the left edge. It means 'this is the 2nd credit of Enzubani'. His previous one is for the large offering from l. 6 to 12. *Dub* may mean *shubati*, as we know from the case tablets, so that the persons mentioned may have received and not given these animals.

95. Suḫurgulalshu sent one sheep by the courier Enlilzishaggal.

A sheep and lamb for the *É-she-pagga*, Urbau brought. 2 grain-fed oxen, 1 ox. 2 grain-fed sheep. 19 ordinary sheep. 4 festal sheep. 1 *alum* sheep. 14 lambs. 1 female festal lamb. 10 male goats. 2 kids. 70 does of Sua^{ki}.

Abilzimti (sent these) as provisions for the lunar obscuration on the 26th day. They were taken from Abbashagga. The conveyancer was Da-a-a-ti, the scribe, 9th month, Bur-Sin 8th. On edge 129 (cattle).

I have made (l. 1) *Suḫur gu lal šu* a name, but it may be a cult object or shrine (see name list, note) to correspond with the *E še pagga* of l. 3 which means 'temple of the bird catchers', but is translated "poultry yard" by the French sumerologists. One wonders why cattle should be brought to a poultry yard and, in these Drehem tablets, frequently in large numbers.

Again l. 10 may be verbal, wholly or partly, as; 'Abizi, took them (*im-ti*) as provisions' etc. or some other meaning connected with *ti* = *Naḫu* which would suit the *ud-na(d)-a*.

96. This tablet is simply a memorandum giving the expenditures and surplus of cattle between two dates. Among the cattle we note (l. 12 & 15) the *máš-ga* or 'unweaned kids' and the *sal-aš-kar-ga*, or 'unweaned does'. The first of the dates (l. 1) is, according to SAKI. p. 235, the 2nd year of Ibi-Sin, but the next date is uncertain: Year the High-priest of the god Nannar was invested. It may be the 4th of Ibi-Sin, if the one given by Myhrman as 3rd is correct. It cannot be the 2nd half of the formula for the 4th year of Bur-Sin (see No 97,[29, 30]) as the date of l. 1 belongs to Ibi-Sin.

97. Rá-gab tablet. A sheep and male goat for the throne of Dungi. Courier, Udshar, *Ragab*. 1 ox, 5 sheep, 5 male goats for Ninlil and Maanaga. The courier was Beliili the *Ragab*. Five male goats were from Abilabikh the *Ragab*, *ud nam-uš-ku šu-ni-in-ta-gin*, 'when the priesthood came to him'. Shatazagzu the *Ragab* was courier. One sheep Ulilish. One sheep Nannarigidu. One sheep Turramdagan. Ragab men. 10 sheep Urdungira the straw man, 60 male goats, Dada the priest (*ušku*). 10 sheep and ten male goats, from Urninshar the singer, 10 oxen Naablalum, the Westerner, sent. Urumu was the courier. 1 sheep for Ninikkush, Lugishzutar the *Ragab* (who was the) courier, did not cause to enter (*la tur-ra-ma*). Among those brought (*šag mu-du*) by Beliarik. On the 19th day they were taken from Abbashagga. 9th month, 4th year of Bur-Sin. On left edge, 21 oxen, 111 sheep.

The title *rá-gab* belonged to a high official, *manzaz pani*, and *mar šipri*. See Index of Words and Phrases. I am not convineed by Legrain that *šuluḫ* is a variant of this title.

98. This is a tablet of sacrificed animals for the 2nd month of the 3rd year of Bur-Sin. On every one of 29 days one or more animals were used, except on the 27th. The count shows 61 sheep, 168 lambs and 25 kids a total of 255. The total given however, is but 228 sheep and lambs and 25 kids, or 253. The total is therefore 2 sheep short. An erasure on the left edge containing the total of totals, 253, proves that the scribe had made some alteration, to which, no doubt, the mistake is due.

99. This tablet contains a list of 1988 *galu-su* animals; part of the tablet is broken away, but what remains gives us 1215 animals, so that 773 must be supplied for the six injured lines.

The conveyancers Aḫuni the mourner, Shagaga the mourner, Sharili, Urnina, Lugalezen and Ururishum each bring from Abbashagga and deliver to Nurzu, on the first day of 9th month of the 6th year of Bur-Sin, flocks of ewes and other sheep, goats and

kids, almost all of which are followed by the qualifying sign *galu-su*, which Langdon translates "tanner", but which Legrain, from his 211, says means the place of origin Sua^{ki}. It will be noticed that the phrase is applied to every kind of animal. See my tablet No 44,^{8}.

100. As this is an unusual tablet, an effort will be made to translate the whole of it. It appears to be a record of sacrifices and payments made, in the 3rd day of the 9th month of the last year of Gimil-Sin, to soldiers under his son Ibi-Sin.

l. (1) 1 grain-fed ox, the fourth servant.
(2) 1 grain-fed ox, the god Ninazagnunna.
(3) 2 grain-fed oxen, 4th servant of Nannar and
(4) Murinabagal.
(5) 1 grain-fed ox the god Ulmashitum.
(6) 1 grain-fed ox the god Nunitûm.
(7) 1 grain-fed ox the god Allatum.
(8) 1 grain-fed ox the god Meslamtaèa.
(9) 1 grain-fed ox 3rd servant (of) Anna.
(10) Sent (*á-gi*) distributed (*ba-a*).
(11) (When) the king entered (*tur-ra*).
(12) 1 grain fed ox a sacrifice to Gula.
(13) 2 grain fed oxen 4th servant.
(14) 4 grain fed oxen
(15) to the god Nannar.
(16) Enginabushu, the cup bearer, was the courier.
(17) The wages of the soldiers were distributed
(18) in Ur.
(19) Soldiers of Ibi-Sin
(20) money (shekels) received
(21) on the third day
(22) taken from (*ba-zi*) Bashaenlil.
(23) The conveyancers were Nursinshagerim and Annia the scribe.
On the left edge 16 oxen.

The interest of this tablet lies in the fact that it mentions Ibi-Sin during the lifetime of his father Gimil-Sin.

While some of the oxen in the list were undoubtedly for sacrifices, as in l. 12 and 14, the rest may have been payment to high officers of Ibi-Sin. In this case we might translate *Lamaduush* (*4-kam-uš*) and *eshduush* (*3-kam-uš*) as 4th and 3rd officers. It is also possible that these were cult objects i. e. menhirs, known as the third and fourth *uš*. See l. 10. "The third uš of the god Anna." l. 16 to 20 record the payment of the soldiers of Ibi-Sin in money, not in kind.

l. 23. *Šag-erim*, in name, may be a title meaning 'officer of soldiers'.

101. Abbashagga sent out, and Shumirra received, 3 calves, 5 heifers 2 years old, 1 bull calf by the conveyancer Inzamu the herdman, 2 oxen by Abbagina, 8 or 9 horses, male and female, by Khunedam, 88 goats, 29 does (imported?), 9 male kids and 21 gazelles by Urnigingar the mourner. 4th day, 4th month and 4th year of Bur-Sin.

Legrain suggests that the *anšu bar* + *an* are mules. Brünnow makes *anšu-ù* = *agalu*, also a mule. They are male and female. The probabilities are that neither is right and that *nu anšu* is a mule, while the *Anšu ù* is a horse.

102. Mekasilim sends a lamb for the house of the augurers by the courier Urbaumu on the 6th day. It was taken from Abbashagga. 10th month, Bur-Sin 6th. Mekasilim is twice called the daughter of the king in Leg. 303,5. 8.

Še-pag-ga = *uz* has probably the same meaning as *uzú* = 'a seer, diviner'.

103. Ludingirra received two grain-fed sheep from Abbashagga on the . . . day of the 12th month of the 1st year of Bur-Sin.

104. 2 grain-fed sheep and 2 ewes without young, on the first day.
70 male goats, on the 2nd day.
3 festal lambs, grain-fed, on the third day.
9 grain-fed sheep and 1 grain-fed lamb,
10 grain-fed sheep as bridal gifts, on the fifth day.
137 sheep and 3 male goats, on the sixth day.
5 sheep, 7 *alum* sheep,
1 festal lamb, 1 festal lamb well-bred and 6 kids, on the 7th day.
62 sheep and 2 lambs, on the 8th day.
30 grain-fed sheep, 15 grain-fed sheep as bridal gifts and 1 lamb, on the tenth day.
14 grain-fed sheep, on the 12th day. Total (L. E.) 381.

Enmu received them from Nashag (during) the 8th month of the first year of Bur-Sin. Leg. p. 156 translates l. 7 & 15 *udu-še gud-e šu-sa*, as "the sheep that follow the oxen", but above is based on Br. 12174 = tirḫatu. Perhaps the phrase expresses some characteristic of the sheep.

105. From Enlilla 4 oxen and 5 cows have gone forth to the kitchen? (*É-mu*) 8th mo. Dungi 57th.

It is highly probable that ancestor worship existed among the Sumerians, as we see from the deified kings. In this case there would be temples of names (*E-mu*), as there are in China today, where sacrifices to ancestors would be offered. It militates against this theory, however, that, as yet, no remains of such have been found. As *mu* also means cook, bake, the translation, "kitchen" has been tentatively adopted.

106. Eninnanna sends by Zallallum, the courier, 1 festal lamb well-bred and 5 festal ewes. Lugalmagurri sends by Udamisharram, the courier, 4 festal lambs and 6 *alum* sheep, among those the Westerners sent. Urninnisigu sent 2 grain-fed sheep, one grain-fed lamb. Eninnanna (for) Mekasilim sent 1 lamb. The conveyancer (of the animals) was Shudada. On the 17th day they were taken from Abbashagga, in the sixth month of the 4th year of Bur-Sin. On left edge, 20.

The date formula is the last half of the 4th of Bur-Sin, unless it be the same as 96[16].

107. This tablet records offerings of a lamb, in each case, to Enlil and his consort, Ninib and Ninazagnunna, *Ninlil-gal* (probably a large image of the wife of Enlil) and Nannar. They were sent by Sheshdada an accountant priest, by the Patesi of Nippur, by Garbau a builder, and M . . . . . è. Zabar(ku) was the courier, and Nashag supplied the animals. Second day, 1st month, Dungi (56?) 58. *Mu Ḫa-ar ši*[ki] *ù Ki-maš*[ki] *ba-ḫul.*

The remarkable feature of this tablet is the date which is a combination of the 56th and 58th of Dungi, unless we are to suppose that Kimash was conquered a second time in 58.

108. This is a very small memorandum for Urazagnunna showing that he sent to the temple kitchen (?), on the 14th day of the 9th month of the 57th of Dungi, 3 sheep, 33 ewes, 27 goats and 8 kids.

The number seems large for any kitchen.

109. A mother goat, with a kid not yet (eating) grain, and two lambs, for the house of Augurers. Urbaumu was courier.

1 grain-fed sheep, 1 grain-fed *alum* sheep, 1 grain-fed doe, 10 lambs and 1 kid (from) Mekasilim the temple has received for the 15th day.

On the 12th day they were taken from Abbashagga. The conveyancer was Dayati the scribe. 9th month, Bur-Sin 8th. Margin, 17.

L. 9 and 10 are not altogether clear, the signs are usually translated as a name *Me-^{d}Ka-silim*, but *me* may mean *išib* = 'an oracle' or may mean people, i. e., the Elamites whose god was Kasilim. The signs *gar-ku* (l. 10) seem to be for *nig-ku* another form of *ni-ku* 'received'.

110. 3 grain-fed sheep, pure, 2 lambs, covered chamber (*dù-úr*). *dù* is half erased.
4 grain-fed sheep, pure, 2 lambs for Nannar.
1 grain-fed sheep, 1 kid, for the throne of Dungi, sent with Ashisira.
2 lambs for Innanna.
1 kid for Nannar, sent by Eninnanna.

Zabarku was the courier. On the 9th day they were taken from Abbashagga. 10th month, Bur-Sin, 1st year. Left edge, 16 (animals).

111. 1 cow slaughtered. Its body for the palace was cut up. Receipt of Lugalutu. 5th month.
2 oxen, receipt of Annashargubbi, 11th month.
1 ox, receipt of Enlillanishag, 8th month.
1 ox, receipt of the warden of the goddess Ishtar. 12th month.

Total, 4 oxen. Total, 1 cow.

A receipt was given by Enlilla. Nashag received it. 54th year of Dungi.

112. 2 sheep, 1 lamb, Gimilili, the mourner.
1 lamb Igiidilu, the warden (*pa-al*).
1 lamb, Ureanna, the Patesi.
1 lamb, Dungiili.
1 lamb, Aakalla, the Patesi.
1 lamb, Igirumakh.
1 lamb Dungikhazigish.
1 lamb Ikbiilu.
. . . . . (Lugal)azida.

3rd Month (*ū-ne-kù*) Bur-Sin 9th year.

113. The King sent from Abbashagga, by the conveyancer Shumamakarra, a man of Erech, a royal messenger, 72 oxen and 5 cows, as plow oxen for Girsu^{ki}. Urumu received them, in the 5th month and 5th year of Bur-Sin.

In the name (l. 4) *kār-rí* may be a title or quality such as 'the courageous'.

114. Intaèa received from Abbashagga, 4 lambs and 1 kid, 8th Mo. Bur-Sin 4th.

115. From among the animals sent on the 13th day, taken from Abbashagga, was 1 sheep of Amarabatum. Ulaili, the mourner, was courier. One sheep and one male goat for the throne of Dungi. Urdunpaèmu was courier. 2 sheep of Ninug the musician. Enlilzishaggal was courier. 8th month. Bur-Sin 8th. L. margin Total 5.

Line 10 was written on tablet after it was almost hard.

116. Five sheep and five goats, grain-fed, for the *E-mu* (kitchen?), in the name of the couriers at Nippur. Four ewes, grain-fed, for the sacred well of the god Dungi. 1 grain-fed sheep for the augurer's house, in the name of the queen. 1 Grain-fed male goat Amālim (gave). Urumu was courier. 12th day of the month (the animals) were taken from Aḫuni. 12th month. Dungi 58th year. See date of 107.

Note that in this tablet (l. 7—8) the queen makes a gift to the *E pagga*, of a grain-fed sheep. Such specially fed animals are for sacrifice or other high purpose. Why should the queen give such an animal for the poultry yard? In this instance we have *pag-ga* not *uz-ga*. This establishes the reading *é-še-pag-ga*.

117. The king sent, from Abbashagga, 9 Festal lambs, on the 19th day. Ludingirra received them. 3rd month. Bur-Sin 2nd. Margin, 9.

118. Eninnanna sent 1 lamb to the house of auguries. Aakalla was the courier. Lunannar the overseer sent, (through) Urninumbara the musician, 8 sheep and 4 male goats. Nannarigidu, the cup bearer, was the courier. Taken from Abbashagga on the 24th day, 9th month 20, Bur-Sin 4th.

l. 5. Ninumbara was a goddess of Erech. l. 13. the ⟨⟨, after the name of the month, may mean, 20th day.

119. The conveyancer Ilusu, under the manager Urnigingar, the mourner, (brought) thirty sheep of Sua^{ki} and 47 male goats of Sua^{ki}. The conveyancer Irrishum, under the manager Shuirra, the mourner, (brought) 31 sheep, 6 ewes, 8 male goats, 11 female goats, on the 24th day, from Abbashagga.

Nurenzu received (them). 9th month, 8th year of Bur-Sin. Whether the title *Iš* in l. 11, that occurs so often, is to be translated 'mourner', as Pinches suggests, or "sword bearer" according to Legrain, I am unable to determine. See Leg. 134, *iš* = porte-épée = *ki-zu*, 'a body servant'?

120. Azagnannar, the Patesi of Shuruppak, received from Intaèa 76 grass-fed sheep, 151 grass-fed male goats, 7th month, Gimil-Sin 6th year. L.E. 227 sheep.

121. An offering of 17 oxen went forth to the god Enlil. Nanar sent 3, Alala 2, Urnigin the scribe, son of Kašhara 3, Ekurrashargubbi 1 . . . . . *su-si-ik* . . . . . *ìr-ru* . . . . . *du-du*. Urbau was the herder sent 4, 12th month — 53rd year of Dungi.

As the total given on left edge is 17, and 13 remain on the tablet, the two lines partly broken away contained 4 oxen. The deity of l. 4 was Shara goddess of Umma, though we have here *lagab* + *gal*, not *lagab* + *sĭg*.

122. 18 sheep, 1 lamb, 1 kid cut up, 12th day, from Abbashagga. Dugga received it. 10th month, Bur-Sin 8th.

123. An ox and 3 sheep for Enlil, an ox and 3 sheep for Ninlil the King caused to enter. An ox (from) Inlallum. Urumu was courier. 1 *az igi-lugal-šu urku ri-ib-ku*, 'one leopard to throw to the dogs before the king'. On the 21st day, taken from Abbashagga. The conveyancer was Dayati, the scribe. 9th month, Bur-Sin 8th.

Note sign in l. 6, transliterated *lùl*. It should be . For *Az* = leopard see note to 142.

124. Shuirra received from Abbashagga 56 sheep, 6 lambs, 159 ewes, 99 female lambs, 5 milking goats and 30 does. 6th month, Bur-Sin 2nd. Margin 355.

125. Aḫuweir received from Abbashagga a regular appointed offering, on the 29th day of the first month, of 6 grain-fed sheep and 1 ewe without a lamb. Bur-Sin 7th. Margin 7.

126. From among those sent out by Abbashagga, on the 28th day of the 12th month of Bur-Sin 8th, were, 1 *alum* sheep, grain-fed, for the *Eš-dů-uš* from Mekasilim, Ninlilamamu, the envoy, was courier, (and) 2 lambs and 1 young female gazelle for the temple of auguries (*E še-pagga*), of which Urbaumu was courier. The conveyancer was Nuurenzu, the high scribe, (*dup-šar-si*).

127. Belíazu received from Lubau tribute of Sharrubani, Patesi of Abiakki.

2 grain-fed oxen, first quality, 11 grain-fed oxen, 1 grain-fed cow, 5 oxen, 1 cow, 20 sheep and 40 kids.

3rd month. Bur-Sin 5th. Margin, 20 oxen, 60 sheep.

For *šu-lal-a-bal* = 'tribute' see Word Index. The month seems to be *Ū-ne-kù*. Both *gud* and *udu*, in margin, used of both sexes.

128. Sharumbani Patesi of Abiakki, received from Lugalamarazag 60 sheep, for a royal offering. 29th day. 1st month. Bur-Sin 5th year.

129. From among the animals, sent on the 26th day, taken from Abbashagga, there were set apart for burnt offerings, as provision of *Udnada*, (last of the moon) *a-izi-zi im-ti nig-ku ud-nad-a-ka-ni*, (l. 5—6) 1 grain-fed sheep, 2 *alum* grain-fed sheep, 1 grain-fed goat, 3 grain-fed does, 4 festal *alum* sheep, 6 lambs.

7th month. Bur-Sin 8th.

Transliterate and translate l. 10 and 11 of tablet 95 like l. 5—6 above.

130. Shuirra received from Abbashagga, on the 6th day, 5th month and 3rd year of Bur-Sin, 25 sheep, 7 black sheep, and 1 kid of the Suaki variety. L. E. 53.

131. Urumu, Gimilishtar, Abbamu the merchant, Ishtarilshu and Urmesh the Patesi, each brought a lamb on the 4th day. Abbashagga received them, 4th month, Bur-Sin 6th.

132. Shuninshakh received from Urshagga, 2 gur 210 ḳa of best grain-meal as wages for hired men. There were 162 men for 1 full day and each received as wages 5 ḳa. 11th month, Bur-Sin 6th.

133. Nanar received from Lugalamarazag, on the 14th day, 129 sheep, 5 festal lambs, 1 festal ewe, 1 goat. 1st month. 5th of Bur-Sin. Margin, 136.

The mention of festal animals in l. 2 and 3 seems to show that this consignment was for sacrifice. Note the festal ewes.

134. Wadarum, the priest accountant, sent one lamb for Enlil and one lamb for Ninlil. Enlilzishaggal was courier. On the 19th day, 6th month and 7th year of Bur-Sin they were taken from Abbashagga. Margin, 2.

135. Dungiaamu received from Abbashagga. 1 grain-fed ox, 8 festal lambs, 1 festal ewe, 4 goats.

28th day, 1st month, Bur-Sin 2nd. Margin 14.

136. 48 *udu-ud-šar, 2 kur máš, šu-bu ku dul-azag ka* is the reading of the first three lines of this tablet. They are very uncertain. The first line is partly erased and may be written on an erasure, the 2nd was written in after the tablet was dry. The meaning seems to be; 46 sheep for new-moon and 2 kids. They were accepted for the holy shrine from the messenger of Meka(silim). The conveyancer Urbau, the son of Turturra, brought (them). 12th month, Dungi 56th. Margin, 48.

l. 1. Possible reading *su-ud-áb* skins of white cows. l. 4 read *me* after *šukkal* and supply *silim* after *ka.*

137. Urtur received from Lugalamarazag, 11 oxen on the 28th day, 4th month, Bur-Sin 8th year. Margin, 11.

138. Intaea received from Abbashagga 4 lambs, 10th day, 8th month, Bur-Sin 6th. Margin, 4.

139. Intaea received from Abbashagga 1 ox, 4 sheep, 2 lambs, 11 kids on the second day, 9th month, Bur-Sin 6th. Margin 1 ox, 17 sheep.

It will be noted again that *udu* in margin is a common noun for sheep and goats, of all classes.

140. Nanar received from Abbashagga 60 sheep, 3rd day, 11th month, Bur-Sin 6th. Margin 60 sheep.

141. Shumama received from Lugalamarazag, 2 festal lambs and 1 male goat. 25th day, 2nd month, Bur-Sin 5th year.

142. Ludingirra, son of Urukibbula, received from Abbashagga nine male *lulim* (camels?) 4 female *lulim* and 1 *ug* + *za* (leopard?) 17th day, 9th month, Bur-Sin 1st. The *lulim* is the sign for the beast of burden = *Gìr* + *udu* = sheep, for wool or woolly

+ *igi* = eye, a prominent feature of the camel. *Az* is composed of *ug* + *za*. *Ug* means an animal of the panther kind and, as *za* may mean 'a jewel', the spots may have been considered such i. e. 'the jewelled panther', or leopard.

143. Akhuweir received from Abbashagga, 1 grain-fed ox, 18 cows, 120 sheep, 50 male goats, 23rd day, 8th month, Bur-Sin 7th year. Margin, 19 oxen 170 sheep.

Gud and *udu* again for male and female. *Udu* for sheep and goats.

144. Ludingirra, son of Kashara received from Abbashagga 13 grain-fed oxen, 12 oxen, 23 sheep, 100 Sua^{ki} sheep, 330 kids, 43 milk goats on the 17th day, 9th month, Bur-Sin 1st year. Margin, 521.

Owing to a misunderstanding in proof correction 33 for 13 in l. 1 crept into the text.

145. 140 sheep and 40 kids from Nashag, son of Urmu, in the name of Dakhi-ishtar. Dungi 57th.

146. 4 sheep of Urninnisig + la, the musician. Urumu was the courier. On the 3rd day they were taken from among those sent by Abbashagga. 9th month, Bur-Sin 7th. Margin, 4.

147. Indaa, the warden priest of Annunitum, received from Sharakam an offering to the god Annunitum, 67 sheep and 90 kids. The conveyancer was Abbashagga (sic!). 8th month, Bur-Sin 3rd. Note the full date formula for Bur-Sin 3rd year. Perhaps Annunitum should be Annuniib.

148. 5 red Sua^{ki} sheep, 85 red Sua^{ki} ewes, 120 black Sua^{ki} ewes, 110 red Sua^{ki} male goats, 30 black Sua^{ki} milk goats.

Names broken away. 8th month, Bur-Sin 4th. Margin, 350 sheep.

The sign *sig* = (*dir*) means 'dark', i. e., brown, as well as red. Legrain proves that *galu-su* animals are from *Su-a^{ki}*. See also tablet 44 of this collection. Notice the different classes included under *udu* in the margin.

149. Igienlilshu received from Abbashagga 1 ox, 15th day, 8th month, Bur-Sin 8th. Margin 1. l. 6. 2nd sign should be *ku* = .

150. 3 oxen, 9 sheep, 6 male goats on the 24th day, from Lugalamarazag, Akhuwir received them. 5th month, Bur-Sin 5th. Margin, 3 oxen, 15 sheep.

151. 4 grain-fed sheep, 2 lambs, 1 sheep, on the 9th day, from Abbashagga. Nanar received them. 1st month, Bur-Sin 3rd. Margin, 7.

It is interesting to compare 151 and 152. After an interval of five years, the same man sent and the same man received.

152. One lamb, on 12th day from Abbashagga, Nanar received. 1st month, Bur-Sin 8th. Margin, 1.

153. 5 oxen, 1 cow, on the 17th day, from Abbashagga. Ludingirra received them, 12th month, Bur-Sin 2nd. Margin, 6.

154. Offering of Igiannaezu, Patesi of Puushki. 23 sheep on the 19th day, 71 sheep, 4 ewes, 3 milk goats, 8 kids on the 20th day; 92 sheep, 42 ewes, 24 milk goats and 24 kids on the 21st day, 22 sheep, 6 kids on the 22nd day and 13 sheep on the 23rd day. Taken from Urazagnunna.

2nd month, Dungi 56th year. Margin, 332.

This tablet mentions the Patesi of Puuskki, gives his full name, is dated. Leg. 357,[5] lacks the name. Its date is Gimil-Sin 6th which would be some 18 years after my tablet. Leg. 23,[2] has the name and is dated Dungi 53rd. TD. 1501, R.[26] has the date Dungi 57th and another patesi named Aḫuur See also 127 and 128 of this collection.

Bal (l. 13), is probably here to be taken as 'sacrificial offering'.

155. Zeluushdagan received from Naramili 14 yoke oxen 6th month, Bur-Sin 2nd. Margin 14.

156. Urnigingar sent one lamb for Enlil. The patesi of Girsu sent one lamb for Ninlil. Lunannar sent a young gazelle for Enlil. The patesi of Nippur sent a lamb for Nusku. (At)u the cup bearer was courier.

Taken from Abbashagga on the 13th day, 12th month. Bur-Sin 2nd.

157. This is the upper half of a tablet. The date is wanting.

3 oxen, 41 sheep, 240 lambs, 111 male goats; credit of Khulaal. His 16th credit. 2 oxen, 1 grain-fed sheep, 31 sheep, 120 lambs, 62 kids. His 6th credit. 1 beast of burden (*anšu-ù*), credit of Urningishzidda.

The *gìr* sign was used for all beasts of burden, including camels, but not, apparently, for the genus *bos* and sheep. Sheep are now used to carry small loads in Central Asia. See 101 note.

158. Taken from Abbashagga one lamb, killed for the house of records. 1st month, Bur-Sin 2nd. Margin, 1.

Such a tablet shows clearly that Abbashagga supplied provisions for the temple and its bureaus.

159. 157 oxen, 120 cows, 11th month.
50 oxen, 15 cows, 12th month.
Lower portion of tablet gone.
Rev. month *ezen* . . . . . Total 71. Total 505 oxen 120? cows have gone forth.
Then follows *mu-du zi-ga edin* d*En-lil-lá ka* =
'Have come (and) gone to the plain of the god Enlil'.

Dungi 58th year.

After the date follows; *gi-ni-in* which appears to mean 'they went'. Perhaps, however, *gi-ni-sum* — 'he shall give them back'. There is doubt about the last sign.

160. Azagnannar received from Bali 5 grain-fed sheep, special, 2 grain-fed sheep, next special, 3 grain-fed sheep 3rd grade, on the 8th day of the 6th month of the 9th year of Gimil-Sin.

The seal: Gimil-Sin the mighty hero,
King of Ur,
King of the four quarters.
Azagnannar,
son of Lunannar
the Ab, thy servant.

The design which, with the seal, completely covers both faces of the tablet, shows nothing but part of a male seated deity. Note the variant *ka* in the date formula.

161. A lamb or lambs from Abbashagga, received by Intaea on the 10th day, 2nd month, Bur-Sin 6th.

162. Urazagnunna received from Intaèa 3 oxen 3 years old, 21 horses, the first time, 9 horses, the second time, 2 horses, the third time. The property of Sheshkalla. A copy of the tablet of Abbakalla. 11th month (intercalary). Year Ibi-Sin became king.

Margin, 3 oxen, 32 horses.

The beasts of burden are the *anšu-ù* and were doubtless horses. See *ù* = *šadû*. BW. II. 412,10 and DSGl. p. 14.

162A. 90 ḳa of rich herbs. A gift to the god Ningirsu from the bow men — — — the Abba received it. Tablet sealed by Sheshkalla.

Year the High priest of Ishtar of Erech was, by a decision proclaimed.

This is an uncertain date.

In this tablet I have translated *ni* = 'oil', 'fat' as 'rich' but this, and the translation of the remainder, is uncertain. *Šim-ni* may = *šim-lí* 'pine' (*burâšu*).

163. Dugga received from Abbashagga 20 sheep and 40 male goats. 29th day, 12th month, Bur-Sin 8th.

Margin 60 sheep.

164. 4 kids cut up (for) the *É-mu* (kitchen?) on 28th day, taken from Abbashagga, 4th month, Bur-Sin 2nd. Margin 10. l. 1 *às udu* = '6 sheep', broken away.

165. 2 cows, 1 ox. Credit of Luninaki, from the office of Urtur. The conveyancer was Abbashagga. Urazagnunna, son of Luningirsu, received.

Part of the date Dungi 56th remains.

Seal of Urazagnunna the scribe, son of Luningirsu, Shepherd *na* (*da-ib*?).

This is an undoubted receipt yet here *ni-ku* takes the place of the usual *shubati* and *dub*. *Gà* at beginning of l. 4 may be part of the name, but I think it here means 'house' or 'office', see Br. 5416. Note that the cow is mentioned before the ox.

166. 24 sheep and kids, credit of Urgar, 7 sheep and kids, credit of Dugga, 2 sheep, credit of Abuumilu, a man of the goddess Šharakam. 5 sheep, visé or credit of Urmesh.

From Dugili Urmesh received 38. Gimil-Sin 3rd year.

This tablet is a receipt, being stamped with an illegible seal, of which only the name Urmesh and the sign *dumu* can be read. The sign *gìr* in l. 7 is evidently equivalent to *dub* in l. 2, 4 and 5.

167. Urazagnunna received ten lambs from Basha-enzu, 11th month (intercalary) Ibi-Sin 1st. Seal: Gimil-Sin, mighty king, king of Ur, king of the 4 quarters of the world. Urazagnunna, scribe, son of Luningirsu the elder (*ab*), thy servant. This form of seal was used by the royal scribes. The formula had not been changed, as yet, from Gimil-Sin to Ibi-Sin.

167A. 70 (ḳa) Urna. 10 (ḳa) Kalaman(a). Dunrazal received it.
Only a part of the O remains. The names are unusual.

168. 1 lamb for the goddess Ninsun,
1 lamb for the god Kal, Nannapalil was courier,
1 young male doe for the temple of Augurers (*É-še-pag-ga*) from Urunannar,
1 ox, 11 sheep, 3 lambs cut up,
2 young female does, dead, for the kitchen? (*É mu*).

l. 11 *mu gìn-uš e-da* 'In the name of the weigh master they went out' (*e-da* = *aṣû*). Urumu was courier. On the 25th day they were taken from Dugga. 1st month, Gimil-Sin, 1st year.

Seal: Gimil-Sin the mighty king, the king of Ur, king of the 4 quarters of the world. Urdunpaè, scribe, son of Urkhani, thy servant.

l. 3 for *igi-du* = *palil* see DSGl. p. 73.

169. 6 grain-fed sheep to the god Nannar, 1 grain-fed sheep to the great treasurer (= EA), 1 grain-fed sheep to the god Nindaishziddin. Taken from Nanar on the 4th day of the month. Atu, the cupbearer, was courier. 10th month, 9th year of Bur-Sin.

Seal: Gimil-Sin, mighty king, king of Ur, king of the 4 quarters of the world. Urdunpaè, scribe, son of Ur-(ḫa-ni?). Thy servant. Same seal inscription as was used on 168 in matter but not in form. This tablet is dated in the 9th year of Bur-Sin. How comes it to have a seal of Gimil-Sin? There can be no doubt that the scribe wrote *máš-gunu* for  in l. 10.

170. I will make you for $7\frac{1}{3}$ shekels a luxurious garment, all wool. No interest given. Enough has been included. Abbakalla paid (it). 2nd month. 55th year of Dungi.

Gab-a BW. 180,7. 11. 'luxurious, rich'. *ga-zù-ag.* 'I will make you.'

na ḫar ba 'no interest given'.

Ib-si-ni = enough i. e. its sufficiency.

Ba-an-ḫab, Br. 10335—6, *napḫaru, paḫâru*, 'has been included'.

Ia-lal. 'he weighed' (= paid).

171. 20 or more grass-fed sheep and male goats, the portion (*sá dug*) of the dogs. Bashaenlil, the keeper of the temple dogs, received it. The overseer was Nawirili. The animals were taken from Urazagnunna. The conveyancer was Nuradad the scribe. 2nd month, Gimil-Sin 9th year. Margin 20 .... The rest broken away.

Great fierce dogs can be seen today at all the monasteries of Ladak and Thibet. The large number of animals fed to these dogs at Nippur shows their importance, and the fact that the meat fed them is *sá dug* 'an offering', is significant.

172. One lamb split open, from Abbashagga. Liburbeli received it. 11th month, Bur-Sin 4th. On the seal 'Ur .... Son of Dugga' only can be made out. This tablet is a small receipt. *gab* (l. 1) = *paṭaru*, 'split'.

173. 3 oxen, cut up, 7th month. ? cows, cut up. 5 oxen, killed for the house of records. 8th month.

From Enan(na). Enlilla received them. 58th year of Dungi.

174. This is a record of ceremonially pure grain-fed sheep or other animal or animals for the festival of the full moon (15th day of the month). Atu the cup bearer was courier. They were taken from Udamisharram. 14th day, 6th month, Bur-Sin 8th.

Only part of the seal; 'Bur-Sin, mighty king, king of Ur', remains.

175. 2 ḳa barley meal, 10 ḳa of *atir* and 1 ḳa of barley meal, were given out to the house of Urdumuzi.

10 ḳa of *atir*, 1 ḳa of barley meal, first time, 10 ḳa of *atir*, 1 ḳa of barley meal, second time, were given out at the granary (*gà-nun*). The goods have gone forth to Urdumuzi. 8th month, Dungi 51st year.

176. This tablet is a tag. A box of tablets (*pisan-dub-ba*) which was sent forth, enclosed in a leather bag, by Abbashagga. Of the 9th year of Bur-Sin it was.

Two similar tablets in Trouv. de Drehem, 64 and 65, actually state that they are the tablets for a year relating to (animals in this case) what has gone forth. In the case of 64, they were sent to the accountant of the goddess Shara kam, and in that of 65 to the temple warden, as they were monthly royal accounts. The whole subject of the *Gà-dub-ba* tablets has been treated by the Rev. Dr. C. E. Keiser of Yale in a work that will shortly appear in the Yale Oriental series.

177. 3 lambs, a treasure (*nig ga*) for the throne of the god Dungi. The property is for the new moon feast of Dungi at Nippur, (sent) from Akhuwir. Luninshakh, the warden of the goddess Anna, received it. 10th month, Bur-Sin 6th. Supply *sar* after *ud* in l. 3.

178. Sheshdada has delivered. May he leave it.

Only seal on R: Lugal .....? scribe, son of Gishzanini (i-lí)? A general receipt given to some messenger.

179. Lakhezu received 2 ḳa of oil, (sesame or olive) the cost being $^1/_6$ shekels, and 10 birds that cost $^1/_6$ shekel 15 grains. Also $^1/_3$ ḳa of butter, its cost being 10 grains, from Urdulazag. The conveyancer was Ilishag.

180. 100 gur of grain, royal measure, bearing interest at the rate of 100 ḳa to the gur (i. e. $33\,^1/_3\,\%$) was received by Aakalla from Abbamu.

Until the month *sig* (3rd) inclusive the goods laid down shall be at interest (*su-su*)-*dam*.

In the name of the king sworn. Date. The year Ibi-Sin devastated Simuruum^{ki} (i. e., 3rd of his reign).

[1]) Title: Nar, a musician. Named for the goddess of Erech. See Br. 4398 and H. G. p. 365 note 3. [2]) Title: Uš-bar. [3]) See Ru. 139, Col. I,$_{9}$. [4]) Ni-šág is prob. an attribute of the goddess. [5]) Title: Galu-ku. [6]) Title: Pa. [7]) This name has before it the sign bad = dead. In the previous line the same person is mentioned as the brother of Lù-^{d}En-zu. [8]) Priest of the divine lady of the sceptre. This is proof that pa had the value ḫad, semitic = *haṭṭu*. [9]) Title: Nu-banda. [10]) Title: Dup-šar. [11]) Title: Pa mu-ama-sig. [12]) Title: Nar. This may be the same name as Ur-^{d}Nin-úg and Ur-^{d}Nin-Ubara. The sign is some form of šar, kešda, (see Rec. 366), which occurs with various inserts, la, ú, bád, šú etc. [13]) This relationship is uncertain and depends on the interpretation we give dumu and šeš-a-ni. [14]) Br. 2008 nu-muš-da = *namaššu* (*mul*) = ^{d}Ramman. See HWB. 469 b. [15]) This tablet has two seals *a* and *b*. [16]) Title: Ír-dŭ-gal. Sagub^{ki} was a town near Lagash. [16a]) Title: Nar. [17]) Title: Šutuk. [18]) Title: Gìr. [19]) Title: Nu-banda ab. [20]) Title: Sag-ma = land surveyer. [21]) Title: Galu-šim. [22]) Title: Ab. [23]) Note that in this case, as in 7, a brother's seal is used: Gar-ú-rum and Ur-šág-ga-mu have the same father, Kuli. [24]) Has titles Gìr + Šukkal. [25]) This name is followed by ni-ku = 'received'. Taken as a title it would here be out of place. [26]) Šukkal, as a divine name, is the same as ^{d}Pap Šukkal, 'the divine messenger', an epithet, in this era, of ^{d}Nin-šaḫ.

The name means, 'the veiled lady'. [18]) Br. 43?8 See H. G. 364 note 3 and 369 note 4. [19]) Ningirsu, strong support of Ninâ. [20]) dNinda is explained by Huber (PKUN) pg. 178 note 19. [21]) = dNin-pa-da. Ḫad-da = Semitic ḥaṭṭu. The name means 'Divine lady of the sceptre'. [22]) In granary names. [23]) The great goddess of Kiš was Innanna (Ištar). See H. G. pg. 383. Jastrow Relig. etc. pg. 639, Engl. Ed. The reading, however, may be dNin-ug. [24]) *E* may be a conjunction so that we should have 2 names, or 'Nin-lil who is beloved'. [25]) Probably a large image of the goddess. [26]) Wife of dPa-sag. [27]) See dNin-ubara and dNin-šar of which this is probably another form. The consort of Ningirsu, the gir-lal, identified later with Ištar. See Ct. 21 335 III 69 in Nr. III pl 36 which PKUN makes Ubara, goddess of Erech. [28]) Br. 11034 = dIb-dIštar. Was this the name of Ištar as goddess of battle, strife, wrath? Ib = Br. 4958, ḳablu. [29]) Br. 2008 = dRamman as thunder. Namaššû means to make a great noise. [30]) Fire god identified later with Nabu who was a water god.

Index of Words and Phrases.

As a rule elements in names are not registered in this index. The intention is to list every sign in the texts and show the connection in which it is used. It was felt that this method would be helpful to those transcribing difficult and obscure tablets of this period, as well as to beginners in Sumerian.

The diacritical marks that distinguish the values are those used in the signlist of this volume. In a few cases they differ from those in general use.

The abbreviations will be found under the „List of Abbreviations".

^{d}ADAD = ^{d}IM 'The storm god' (*Ramman*) 58,$_{195}$ 81,$_{15}$ 88,$_{9}$ 90,$_{18}$ 171,$_{10}$ in p. n.

^{d}ADAD (=) 91,$_{282,\ 317}$ in name UR-^{d}ADAD-ILU. For this reading comp. name on archaic agate hammer in the American Museum of Natural History. Bulletin XXI Art. V p. 40,  ^{d}ADAD Ì-LÍ.

A-DAM-DUN p. 100 note 16.

AD in p. n. AD AN-NÍ-MÁ-GAB-BÍ-DU, WA-AD-RA-AD, I-ASARU-NA-AD.

AD-É 'Household steward'? (*aduppu* SAI 10566) 60,$_{43,\ 60,\ 71}$ in 60,$_{51}$ preceded by UR which may be a scribal error.

AD-DA 'Father' (*abu*) Br. 4186, he who decides, determines, DSGl. p. 8. In p. n. AD-DA-IZKIM, AD-DA-KAL-LA, AD-DA-MU, AD-DA-NA.

AZ 'Leopard'? (*asu*) DSGl. p. 15. 123,$_{8}$ and 142,$_{4}$ cf. p. 75 note, see translation of 123,$_{8-9}$ on p. 73. AZ and UR-KU appear

to be connected. see Br. 3875 and comp. Leg. 342,4.

AZAG 'Bright', 'pure' (*ellu*), 'holy'? in names as AZAG-^{d}NANNAR 'brightness of the moon', DUL-AZAG 'holy shrine' 136,8? AZAG for KUBABBAR, 'price', 'money', 37,7, 11, 14, 16, 26 179,2, 4, 8.

AZAG-UD = KUBABBAR, 'Silver' (*kaspu*) 30,1 37,2, 21, 24 37,A1 68,142.

AZAG-GI see GUŠKIN, 'gold' (*ḫurâṣu*) p. n. 55,8 91,134.

AZAG-LAL 57,33, 63 This means weighed silver, but in view of *sanâḳu ša ṣarpi* Br. 9919 does it mean stamped or pressed silver pieces?

AZAG-GIM 'Silversmith' 3,8.

AZAG-ZU 'Wise' (*enḳu*) in p. n. ŠA-TA-AZAG-ZU 73,A7 97,10, cf. DSGl. p. 15 NAM-AZAG-ZU.

AZAG in p. n. AZAG-^{d}NANNAR, AZAG-ŠÁG-GA, AMAR-KI-AZAG-GA, EN-ŠAG-AZAG-GI, UR-AB-AZAG-GA, UR-AZAG-NUN-NA, UR-DUL-AZAG, UR-DUL-AZAG-GA, KA-AZAG, LÙ-AZAG-NUN, LUGAL-AMAR-AZAG, ^{d}NIN-AZAG-NUN-NA, ŠU-AZAG-GI.

A-ZU 'Physician' (*âsû*), 'magician' (*barû*), Br. 11377-8. In mo. n. EZEN-^{d}NIN-A-ZU and KI-SÌG-^{d}NIN-A-ZU.

A-KA 'Laid down', 'delivered', 'measured' 33,18. KA = *nadû*, *buṣurtu*, but see LSG. p. 202 under AGGAD, and S^{b} 205, A-KA = *madâdu* 'to measure'.

A-KA-A in 45,11 A-KA-A NA-BA-A-GAR 'The deliveries were not made', in 37,28 54,24 68,101, 155 A-KA-A-GÀ-GÀ, 'the deliveries were made'. GÀ-GÀ = *šakânu*.

A-KA-ḲA = A-DÙG-GÅ? 'To smite' (*maḫâṣu*) Br. 11404. see note to 66,84 on p. 59 and p. 102 note 3.

AL (1) 'High', 'mature', 'ripe' (*ṣîru*) in ÁB-AL 'mature cow' 69,1 5, 17 71,18, cf. LSG. p. 202. (2) 'pickaxe'? (*allu*) LSG. p. 202. (3) 'keep', 'preserve', 'protect' (*naṣâru*) in PA-AL = ŠABRA (*šabrû*) 'temple warden', i. e. keeper of the wine and food supplies. cf. HWB. p. 70 *allu* DUK-AL-UŠ-SA = *kar-pat ši-ik-ki* K. 152 Col. 1, 42 = *kar-pat šik-ki*, HWB. p. 657 *šikku*. The sign originated in the picture of a leather water bottle used to preserve wine, beer and sour milk as Hommel and Delitzsch long ago suggested. The LÙ AL-AG-A = *râpiḳu*, Br. 5758 corresponded to the AL-AG workers of Langdon AD 12,15 and were people who carried earth in baskets (= GIŠ-AL) as the Arabs at excavations do to-day.

AL in p. n. AL-LA, AL-LA-RU, AL-LA-TÙM, ḪU-LA-AL.

A-LAL 'A derrick', or 'balancing pole to lift water', 1,12 see Br. 11639. A-LAL-ÍD-DA = *šikin nâri*, 'a structure by the river side'. As A-LAL in 1,12 is followed by ZABAR, 'bronze', I have translated 'weighing scales', because the weight of bronze seems to forbid a derrick. Comp. RU 126,II16 where an URUDU A-LAL is used to weigh dates.

ALAL 'A water vessel', here of copper (*iṣ elallu*, *pisannu*) 1,14 perhaps 'a filter'. Br. 6014 *naṣâbu ša ḳanê*, 'to collect, said of reeds'. The pictograph in BW. I, 272, shows that the upper part was made of closely woven bamboo, the lower part of metal or earthenware to hold the filtered water. Double jars for drinking water are in common use in Babylonia still, though the upper half of the filter is now made of porous pottery.

ALIM 'King', 'highness' (*šarru*, *kabtu*) DSGl. p. 9. in p. n. AMA-ALIM, UR-^{d}GÁL-ALIM, KÙ-ŠA-BAR-ALIM.

A-LUM 'Domestic'? see HWB. p. 469 *namaššu* (= A-LUM) 'to swarm, make a noise'. A colony, or swarm of people who make a noise. It may therefore mean 'domestic'. It qualifies sheep and other animals in these tablets. cf. 95,6 104,11 106,6 109,6 126,1 129,1, 3. *A-LUM* = fruitful, pregnant SRD. p. 39 is doubtful.

ANŠE A beast of burden, 'ass', 'mule', 'horse', 'camel' and perhaps elephant, according to the qualifying signs which precede, follow or are attached to the sign. ANŠE and ANŠE-SAL 1,$_{7}$ (*imêru* Br. 4984), pronounced EME, was a female ass, as opposed to ANŠU NITAḪ, pronounced *ŠAGUB*, cf. PA p. 103, note.

(ANŠU) Ù-RA = *sisû*, Ct XIV 11 93080 Rev. 17, ANŠU KÙR-RA DSGl. p. 128.

ANŠU (A-) AB-BA 'A dromedary' (*ibilu*) DSGl. p. 14.

The following varieties occur in UDT.

ANŠE 69,$_{8}$ 71,$_{12,\ 15}$. ANŠE-SAL = EME 1,$_{7}$ 'Female ass'.

ANŠU-NITAḪ 'Male ass' 69,$_{8}$ 71,$_{12}$. ANŠU-NITAḪ-DIŠ 71,$_{13}$ 'male ass one year old'.

ANŠE-Ù=DURA 'Mare' (*sisû*) 157,9 162,2,4,6 and L. E.

ANŠE-Ù-SAL 'Mare' 101,10. ANŠE-Ù-SAL MU-MIN 101,11. 'Mare 2 years old'.

ANŠU-Ù-NITAḪ 'Stallion' 101,8. ANŠU-Ù-NITAḪ MU-MIN 101,9. 'A stallion two years old'.

ANŠU-Ù-AMAR-GA 'A nursing colt' or 'filly' 101,12.

ANŠU-BAR + AN-NITAḪ 101,7. BAR and AN both signify 'high', 'tall'. It is not impossible that this animal was an elephant.

ANŠE-ZI 'Riding ass'? 41,14. ZI = *našû*, 'lift up', 'carry'.

ANŠU-ZI-ZI-NITAḪ 91,362, 387. ANSU-ZI-ZI-NITAḪ-MU-AŠ (1 year old) 91,364.

ANŠE-ZI-ZI-SAL 91,366, 389. ANŠE-ZI-ZI-SAL-MU-AŠ 91,368. The meanings of ZI-ZI, *nasâḫu*, 'tear away', *nazâzu*, 'stand firm', *našû*, 'lift up, carry', all point to a swift and powerful riding animal like a well bred horse (MU-AŠ = 1 year old).

ANŠE-MUK 'Locked up asses' (she ass in heat?) 68,111. MUK = *nuphi* 'inflamed' BW, II 3,6.

NU-ANŠU-NITAḪ ZI-LUM 'A tall riding mule', 69,9. NU is negative and LUM = *uššubu* 'spring up' 'grow'.

ASARU in p. n. I-ASARU-NA-AD 91,140. MSL. p. 40 identifies this value with Marduk. cf. BW., II, 445.

Pinches, PA p. 16, note 2, suggests URU as the Sumerian value. Perhaps, with DSGl. p. 5 and p. 35, it would be best to distinguish APIN from ENGAR by using the latter or URU when farmer is meant.

Desire (*ṣibûtu* Br. 6751) 32,10 in DUB-BA-NI ÁŠ ḪA-BA-AB-TI 'His tablet desired (i. e. his quittance) let him receive'. **2.** = ZIZ (*kunâšu*) Accd. to GAB pp. 20, 55, 'emmer', *triticum dicoccum*, obtained by identification of *kunâšu* with Aramaic *kunnātha*, usually translated 'spelt'. *Kanâšu*, from which *kunâšu* is probably derived, means 'bend', while IM-GÀ-GÀ, the gloss for

ZIZ-A-AN = *kunâšu*, may mean 'prepared' and both refer to the peeling of the grain. The difficulty with Hrozny's identification is that it does not take into consideration other meanings of the sign ÁŠ or ZIZ. The translation 'hemp' is certainly possible, see p. 56, note to translation of 62, even if we admit the ÁŠ grain formed an important factor in Babylonian beer, as peeled hemp seeds may have been added for their intoxicating properties. cf. 1,$_{21}$ 19,$_{1}$ 62,$_{2, 14, 19}$ 63,$_{5, 8, 18}$ 67,$_{18, 19}$ ÁŠ NUMUN 19,$_{2}$.

É-BIL-LI 'Temple of cedar fire'? RU p. 4 says it = É-GIBIL-LI 'new house', but compare Jastrow RBA p. 202; also index to Frazer's Golden Bough, The Magic Art. II (3 rd ed.) under 'fire'. The cedar was a sacred tree among the Sumerians as the oak was among Romans and other Europeans. It is not improbable that a perpetual fire was maintained in special temples in various parts of Babylonia. It is possible, of course, that LI is a phonetic compliment, in which case we would translate 'Temple of fire' or perhaps better 'new house'. See p. 100.

É-GAL 'Palace' (*êkallum*) see temple list and g. n. ^{d}NIN-É-GAL.

É-LAL? p. 101 note 11.

É-MU 'Kitchen'? 'bakery'? (*išâtu* BW II, 62,$_{12}$) If this is the meaning of MU the translation would be 'fire house or temple', like É-BIL-LI, i. e. a temple with sacred fire. The chief meaning of MU is, however, 'name' (*šumu*) hence 'temple of names'. See note to translation of 105. The objections to the translation bakery or kitchen are the connection in which the É-MU is often found and the large number of animals sent to the place. Thus in 116, a tablet of offerings, ten fat sheep and goats sent to the É-MU are followed by five ewes for the sacred well of Dungi. In 168 after offerings to the goddess NINSUN, the god KAL, etc., a nursing female gazelle (*ṣabîtum*) for the É-MU is mentioned. In 108, a very small tablet, we have the record of 71 animals sent forth to the É-MU on the 14th day, doubtless for the full-moon sacrifices on the 15th day. Are we to suppose the Sumerians were provided with facilities for cooking at one time 71 animals and often many more? cf. Ct 17775, VII, 47 R 8 É-MU^{ki}-NAM-MAḪ. 'The É-MU place of exaltation' (NAM-MAḪ = *ṣîrûtu*). This was certainly not a kitchen.

É-NE Plural ending in UŠ-BAR É-NE 67,$_{7}$ 'the weavers'.

É-PAG-GA 116,$_{7}$ and É-ŠE-PAG-GA in temple list p. 101 note 22. Note to 95 on p. 68, to 102 p. 70. 'A temple of auguries', generally read É-UZ-GA. For the reading PAG see also PA 18,$_{8}$ and

note, PAGA = *êsêru ša iṣṣuri*, 'to catch, said of a bird'. But even if we read UZ this would probably be the same as UZÚ, AZU (*barû*) 'a diviner'. Arabic اسو = *asâ* 'console', 'cure', 'make peace' may have a bearing on the meaning.

É-RÍM (É-KÀŠ?) 'House of the couriers' (KÀŠ = *lâsimu*) 41,$_{20}$ cf. p. 101 note 20 and DSGl. p. 116 III KÀŠ.

BÁ = SU in p. n. BÁ-ALIM (Semitic name?) BÁ-BÁ-NA, BÁ-NAR, BÁ-ŠA-^{d}ADAD etc. see name list. BÁ-ŠA seems to be a title with some such meaning as 'oracle' or 'herald'. see p. 88 note 20.

BABBAR in É-BABBAR, 'temple of the sun'. in KÚ-BABBAR = AZAG-UD q. v. 'silver' $57,_{45}$.

BAD **1.** = ZI-IZ, Br. 1490, in ŠE-BAD 'spelt grain' $6,_1$ $8,_1$ $29,_1$. Comp. Egyptian BD-T, which accd. to Hrozny is not spelt, but emmer. Cf. HG. p. 15.

2. = TÍL, 'dead', 'kill' $58,_{8\ 17,\ 45}$ etc. $59,_{52,\ 72,\ 76,\ 86-90}$. BA-TÍL 'was killed' (*mâtu*) $70,A_1$ $111,_1$ $158,_2$ $168,_9$ $173,_4$ 'was finished', 'completed' (*ḳatû, gamâru,* DSGl. p. 157 II TIL). $64,_4$ in ŠE GAN-GUD GUR ŠE AMAR BA-TÍL 'Grain of the cultivated field a GUR was finished per heifer'. 'but see alternate translation under GUR.

3. = SUMUN, SUN, 'old', 'worn out' (*labiru* Br. 1515) adj. said of clothes and a divan $1,_{24,\ 25,\ 33}$; title 'the aged' in p. n. AL-LA-BA-TÍL. GIŠ-BAD (*i-ṣu-la-bi-ru,* DSGl. p. 252) a title after p. n. AMAR-KI-AZAG-GA.

BÁD 'High' (*šaḳû, elû*) 'a wall' (*dûru*) in p. n. UR-^{d}NIN-BÁD.

BAL 'Pour out' (*tabâku, naḳû* Br. 282 and 271) 'a tax', 'a libation'. $127,_8$ in ŠU-LAL-A BAL ŠAR-RU-BA-NI PA-TE-SI A-BI-AK^{ki}, also $154,_{13}$ see translations pp. 73 and 76. $48,_3$ $51,_4$ in ERIM BAL-KU-A, 'slaves who draw water'. $23,_3$ 'a guard' in ERIM BAL-GUB-BA 'Soldier who carries an ax'. (*pilaḳḳu* comp. RU. p. 8). It can also mean 'an interpreter' (*turgumannu* BW. II $9,_{28}$). ŠE-BAL-BI in $68,_{53,\ 105,\ 113,\ 135}$ means 'tax' as may be seen by comparing $68,_{163}$ = BAL-BI-DIŠ-ÁM UR-^{d}KAL PA-TE-SI 'The first tax of Urkal, the PATESI'. This expression RU p. 8 translates 'equivalent'. GAB p. 197 'Dispositionszugabe; Materialverlust' i. e. 'proportionate addition', 'shrinkage'. Neither translation would suit $68,_{163}$. As this is the key to BAL-BI in other parts of this tablet, so is it probably the key to this expression in most of the Babylonian grain tablets.

É-ŠAG-GI-PÁD-DU.

DU-DU = LĂḪ (1) 'to seize' (*aḫâzu* etc. DSGl. p. 169 II. LAḪ) in NÍG-GĂ-LAḪ 'the property was seized' 50, but DU-DU may be p. n. here. (2) 'travel' 'go to and fro' (*dâlu*, Br. 4915) in SIB-É-A-LÂḪ 'overseer of the traveller's house' 59,79 (3) title 'one who brings' (*abâlu* Br. 4915) 67,14, 17; see note p. 60 (top) in 67,20 verbal? 'sent' 'brought to' LĂḪ 121,8? p. n. GU-DU-DU, DU-DU.

DÚ = UL p. n. AN-NI-AB-DÚ, see p. 95 note 19, É-E-BA-DÚ, see p. 100, note 17 mo. n. MU-ŠU-DU; see UL.

DÙ = DUL 'house' 'cover' (*šubtu*, Br. 9588, *katâmu*, Br. 9582) in DÙ-ÚR 'a roofed chamber' 110,2 DUL-MA-NU 'a locked chamber', 'prison'? 67,15 MA-NU = *šigarum* 'bolt', 'a cage', DSGl p. 182 (top). DUL-AZAG 'shrine'? 136,8. p. n. UR-DUL-AZAG, UR-DUL-AZAG-GA.

DŪ = RÚ v. 'build' 'make' (*banû, epêšu* Br. 5248, 5254) MU-DŪ 'built' 31,16 100Lo.E. 160,13 171,16. In MA-AN-NAM-MÚ-DŪ, 20,2 BA-DŪ 'was built' 64,22 73A10. As this sign constantly interchanges with RU in the old Sumerian inscriptions, it would seem that its value, when meaning 'to build', should be RÚ not DŪ, but the usual practice is here followed.

In n. GIŠ-DŪ-ḪA 'harpoon for fish'? 1,48 from GIŠ-DŪ 'a wedge', 'sharp stick' (*sikkatu*, Br. 5267) and ḪA 'fish' (*nûnu* Br. 11821). adj. in GIŠ-DŪ q. v. qualifies GUKKAL 104,12 106,1. In AMAR-MAŠ-DŪ 'young gazelle' 91,311, 328. AMAR-MAŠ-DŪ-UŠ 168,5 AMAR-MAŠ-DŪ-SAL 126,5, 168,9 see AMAR. mo. n. MAŠ-DŪ-KÙ. gr. n. SAG-DŪ 'judge' (*tašimtu* Br. 3592). p. n. SI-RU-AB.

DŬ = GAB q. v. **1.** 'crush' said of grain (*ḫašâlu ša šê'im* Br. 4476) in Á-TÚG-GÀ (Á-ḪUN-GA?) GIŠ DŬ-TAB 'wages for hiring teams to crush grain' 55,18.
2. 'Lift up' (*našû* Br. 4483) in BA-AB-DŬ 'was set up' 94 L. E. The meaning may, however, be *paṭâru* Br. 4488 'loosen' in the sense of 'free', 'rescue'. The sacred ibex ship may have been. carried off by enemies and recaptured from them. In title, ḲA-ŠU-DŬ 'butler' q. v. pl. n. GÚ-DŬ, Cutha.

DŬ? = KAM q. v. forms ordinals after numerals and with UŠ denotes quality, thus ÊŠ-DŬ-UŠ, 'third quality', 100,9 126,1 160,3 LIMMU-DŬ-UŠ, 'fourth quality', 10,1, 8, 13, said of animals. Comp. 43,10, 12, where it is said of wool cloth. This value is preferable to KAM on the ground of euphony.

DUB = KIŠIB 'seal' 'creditor' (*kanâku ša kunukki* Br. 3926). Appears as a rule on the envelope of case tablet, the inner tablet having ŠU-BA-TI instead, meaning 'received' or 'creditor'; but sometimes GÌR = visé, takes the place of DUB, 2,2 4,7 comp. case 5 6,6 7,4 8,6 11,6 14,6 15,6 16,5 17,6 18,4 19,6 20,8 22,5 23,7 25,4 26,8 27,6 28,5 29,5 34,4 visé, 'credit of' 54,2, [14,] 22 55,2, 3, 4, 7, 8, 10 62,6, 9, 12, 16 64,11, 13, 15 66,91, 95 68,89, 94, 100 73,A7 94,5, 13, 16, 22, 26 111,3, 5, 8, 11, 15 157,4, 10 162,A6 165,3 166,2, 4, 5 DUB PATESI 21,8 and case 5 37,15 94,1. DUB-BA 'Quittance' 'receipt' 'pledge' DUB-BA-NI ÁŠ ḪA-BA-AB-TI, 'his quittance asked, may it be received' 32,10–11. DUB-BA-KA 'for a pledge' 33,10 DUB ŠU-BA dEN-LIL-LÁ-TA NA-ŠAG ŠU-BA-TI 'the pledge was given by dEN-LIḪ-LÁ, NA-ŠAG received it' 111,15–6. In É-DUB-BA 'record house' 12,3 158,2 173,5. In GÀ-DUB-BA 'case, or jar, of records' 35,1 36,1 176,1. In DUB-GID-DA 'long accounts' 35,2. 'Surround' 'enclose' (*lamû, ṣibû* Br. 3927, 3930) in f. n. IŠ-DUB-BA 'surrounded by sand'; see A-ŠAG.

DUB-DUB 'Pour out' 'give out' (*tabâku* Br. 3933) 175,4, 12 DUB-DUB is usually considered a kind of grain. That it means 'given out' here is proven by ZI(G)-GA 175,13. For a different explanation cf. GAB. pp. 122-3, 134.

DUB-ŠAR 'Tablet writer' (*tupšarru* Br. 3941); see seals of 2, 7, 8, 11, 13, 14, 16, 17, 18, 20, 24, 25, 26, 27, 28, 37A, 70A, 73A, 165, 167, 168, 169, 178, also 27,5 91,130 92,43 95,16 100,24 109,15 112,18 121,3 123,13 126,12 171,11. DUB-ŠAR-SI 126,12. DUB in NI-DUB 'a granary' (*šapâku* Br. 3931) The expression is verbal, 'heaped up' (grain); see list of granaries p. 102. In p. n. UR-DUB, UR-dNIN-DUB, UR-DUP-PISAN. The sign DUB is probably derived from the pictograph of a hand-mill i. e. a saddle stone for grinding grain.

DUBBIN 'A leg of a bed, divan or throne. See Leg. pl. XXXIV, 303,1. For other meanings, cf. BW. II, 104.

DUG = DUK 'urn' 'pot' 'jar' (*karpatu* Br. 5893). DUG-GA, 21,1, 8, 7, if GA is not p. c. 'jars of milk'. In ŠU-BA DUG-NE-KA '(Grain Nalag) gave for their pots' 33,4. AŠ DUG Ú-SA-ŠIG 'one pot of pure DIDA (drink)' 39,6. DUG-SAḪAR 'dust pots' 41,21 (DSGl. SAḪAR I).

DÚG in compound DÚG + GAN = BIR. SU-BIR (*tukkanu* Br. 230). ŠAG SU-BIR 'in a leather bag' 176,4; adj. ŠAG-DÚG, descriptive of a kid, meaning 'good heart' 77,12 g. n. dGÀ-TUM-DÚG, p. n. É-UR-BI-DÚG, LÙ-DUG-GA, LUGAL-DUG-GA, MÁ-KÁR-DÚG-GA, NAM-MÉR-RA-NI-DÚG, DÚG-GA, see also ŠÁR.

With name of father and plural ending, DUMU ..... ME 58,62, 66, 78, 86, 98, 132, 159 *passim* 59,7, 15, 53,? 75. Followed by pos. pron. DUMU-NI 'his son' 58,52, 56 etc. 59,9, 21, 28, 31, 87 With plural ending DUMU-NI-ME 'his sons' 58,6, 16, 25, 33, 193 59,82. This is possibly a title, as Barton HLC III, name list, makes it, and to be read BAN-NI. See DSGl. p. 67. I BANDA, ⋋ = *in-du* and *takširu*. *In-du* = 'to help' but ⋋ = BA-AN-DA. Comp. Contenau, Contribution a L'Histoire Economique D'Umma. Tablet 29. The title may, therefore, mean 'assistant'; but there are numerous instances where the correct translation is 'his son'. DUMU PA-TE-SI, 'son of the Patesi' 67,57. DUMU-SAL 'daughter' (*mârtu* Br. 4160) 1,4 also used for daughter without SAL 59,59–62. DUMU 'Man' 'native of' (*amêlu* Br. 4076) in DUMU URÍ^{ki}, 'native of Ur. 'Young man or boy' (*siḫru* Br. 4085) 60,21. In NU-BANDA 'an overseer' (*ḫa-za-num* Br. 1986) Cf. HWB p. 272, *ḫazânu*. UR-DUN, UR-^{d}DUN-GI-RA, UR-^{d}DUN-PA-È, NA-BÍ-^{d}DUN-GI, ŠU-^{d}DUN-GI. see names under DUN-GI. The meanings *harâru* 'dig' (Br. 9879) and *pitû ša nâri* 'plow? said of water' (Br. 9870) together with the oldest forms of the sign, (BW. 427 I) make it probable that its original depicted a water buffalo (*bos bubalus*) However, see AD p. 8, note 6. Langdon thinks it may have been the zebu. The *bubalus* is used for sacrifices in India today, and the female yields much milk. It is also used as a beast of burden and thus fulfils all necessary conditions of identification.

NIR-NI-DA-GAL, NU-NI-DA; for names with first sign NI and NI-NI see list.

NÍ = IM in p. n. AD-AN-NÍ-MÁ-GAB-BÍ-GIN, BUR-AN-NÍ-IG-GA-ÊŠ.

NǏ = GAR in p. n. LUGAL-NǏ-SI-DI-E i. e. 'King of righteousness' (*išaru, mêšaru* Br. 3461ff. and 12032) = Melchizadek! cf. 91,80.

NIBRI see EN-LIL.

NÍG = GAR 'a possession' 'property' (*aḫḫuzu* Br. 11953) in SAG NÍG-GA-RA KAM 'total property' 64,6 68,73. NÍG EZEN-KU UD-(ŠAR) etc. 'the property is for the new moon feast of, etc.' 177,8 This meaning for NÍG is proved by NÍG-GA in 177,1. NÍG-GA 'treasure' 'property' (*bušû, makkuru* Br. 12085—6) In NÍG-GA LĂḪ 'the property went forth' 1,50. NÍG-GA ŠEŠ-KAL-LA 'property of ŠEŠ-KAL-LA' 162,8. In p. n. NÍG-GA-^{d}BA-Ú 'treasure of Bau'. NÍG- KU 109,10 129,6 = NÍG-KÙ? 'eatables' (DSGl. p. 200 II NÍG). In favor of this see ŠUKUM-MA 95,11 in a parallel passage. NÍG-ŠER-ŠER 'binders' ('packers'?) (*rakistu* Br. 12050); see also *ḳaṣâru* Br. 4317 'to bind' 'connect'. It is evident that NÍG is here a particle forming an abstract noun. NÍN in NÍN-ŠID-AG 'a transaction' (*nîkasu epêšu* OBTR., sign. list, p. 39) 36,2 37,80 68,156. NÍG in legal formula, ŠU-NÍG-TUR-LÁ-BI = *tukundi-bi* 31,7 which means 'in case'. NÍG-GIM-MA 'saliva'? (*aršašu* Br. 12140) in NÍG-GIM-MA-ZABAR TUR-TUR 'small bronze cuspidors'? 1,17. As the meaning *aršašu* is doubtful, *bunnanû* SAI, 9345, which apparently means 'image', may be more correct.

NIGA? = LÙ + ŠE 'a dead body' (*marû*, Scheil ZA XII p. 260) 111,1.

NÍGIN 'House' 'some sacred building' (*kummu* Br. 9252) in p. n. UR-NÍGIN GAR, UR-NÍGIN DUP-ŠAR, proving that GAR after the first name is a title.

NIGÍN Combined with ŠU in ŠU-NIGÍN 'total' 'sum' (*napḫaru* BW. II 475,18).

NIK = NÍG or GAR in p. n. NIK-KAL-LA 72,3 It seems to be a title like LÙ and UR. see LÙ-KAL-LA 72,5 and such names as GAR-^{d}BA-Ú.

NIM (1) 'A bee' (*zumbu* Br. 9030) 'to collect' 'harvest' (*ḫarpati*, PA p. 168, 95,4 note) in gr. n. NIM-E-NE 'the bees' (or harvests?) 55,14. (2) title? (DIŠ (ḲA) ZID ŠE NIM GI-ŠA^{ki}-ME 81,6. MIN (ḲA) ZÍD-ŠE NIM KI-MAS^{ki}-ME 81,21 In such passages NIM is usually translated 'a high official', from *šakû* S^{b} VI,21 or 'Elamite' Br. 9014 Comp. Hussey II p. 13, 74 but the sign NIM seems to have the meaning 'allowance' or 'portion', thus, above, 'one ḲA of barley meal, allowance of the men of Gisha;

'two ḲA of barley meal, allowance of the men of Kimash'. Note that the name of the conveyancer of these men follows in each case.

NIMGIR see MÈR 'a steward' 'overseer' (*nâgiru* BW. 304,9); see p. n. MÈR.

NIMIN numeral 40; see arithmetical index.

NIN 'Lady' (*bêltu* Br. 10986) 'queen' (*rubâtu* Br. 10990), 'temple devotee', 'priestess' (*entu* DSGl. p. 204, Br. 10997). In SA-DÙG NIN 'at the appointed offerings to the devotees' (or to the queen?) 41,12. DINGIR is not certain after NIN. MU-NIN-ŠU 'in the name of the queen' 116,8. In NIN-DINGIR ^{d}MES-LAM-TA-È-A, 'devotee of Nergal' 91,335. In title GALU-NIN-DINGIR 'man in charge of the devotees' 37,23, 31.

The name NIN-IḲ-KUŠ 'the lady that has the vail' (see KUŠ) is interesting and seems to mean Ishtar, but it may be a male name and, what follows, his title. NÍN = NÍG, GAR, in NÍN-ŠID 'an account' 'a transaction' (*nikasu*, Br. 12082) 33,8. NÍN-ŠID-AG 37,30 54,29 62,22 64,19 68,3, 156. In NÍN-ŠID-TA A-KA-A NA-BA-A-GAR, 'of the business, a partial delivery was not made' 45,11 56,63, 66, 70 in last, NÍN-ŠID-TA-ŠU UNU 'business the UNU handed out' (i. e. transacted, TA-ŠU = AG). In NÍN-ŠID-AG Á ERÍN-NA 'transaction account of the soldiers pay' 36,2, 3.

NINÂ = EŠḪANNA (Hommel). Name of daughter of the ocean god Ea. Her ideogram was a tank of fish, doubtless sacred. A quarter of Lagash was named NINÂ^{ki}; title EN ^{d}NINÂ 91,135; pl. n. VII. Sign List.

It is hoped that the arrangement of this sign list with its index will prove as useful to others as it has to the compiler in working with material of the last Ur Dynasty.

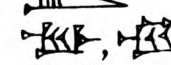

The recent publication of Barton's work on the Origin and Development of Babylonian Writing offered the opportunity of adding references which contain, not only the sources and histories of the signs, but their values and meanings. To these have been added other references where they were deemed necessary.

The simple numerals after the values refer to the sign numbers in Barton. The others will be found through the list of abbreviations. The following additional abbreviations are used here.

n = note; nr = numeral; bf = before; p = page; pl = plate. The Roman numerals refer to plates in Legrain's LE TEMPS DES ROI D'UR.

Zusatzbemerkungen

von Prof. D. Dr. *Fritz Hommel.*

Sowohl mein verehrter Freund, Herr Dr. Nies, als auch die Verlagshandlung haben mich gebeten, der oben S. 193 abgedruckten Notiz noch eine Reihe weiterer Nachträge beizufügen, welcher Bitte ich jetzt (Dez. 1919), nachdem ich meine Konkordanz zum alttürkischen lexikalischen Werk des Mahmûd von Kaschgar Divan (Sammelbuch) der Dialekte der Türken (3 Bände, Konstantinopel 1333—1335 d. H.) im Manuskript fertiggestellt habe[1], gern nachkomme.

Schon im Frühjahr 1910 hatte ich mir die wichtigsten Texte von Niesens Telloh-Sammlung (Nr. 1—90) mit Ausnahme von etwa 20 Nummern abgeschrieben und mit dem Besitzer im Hinblick auf die von ihm vorbereitete Ausgabe durchgesprochen. Seither hat Rev. Nies seine Sammlung um weitere 90 Stücke vermehrt und diese seiner Ausgabe einverleibt, deren Manuskript sich seit 1913 in den Händen der Verlagshandlung befand. Mein Interesse an diesen Urkunden wuchs dadurch, daß ich während des Krieges die letzte Korrektur las, um zu überwachen, daß alles von Nies Korrigierte auch richtig erledigt worden sei; gelegentlich habe ich dabei auch einiges mir gerade Auffallende verbessert. Aber zu einem eigentlichen Studium der Texte, so wie sie es verdienen, kam ich auch bis heute nicht, und so möge denn das Folgende nur einiges am Weg Aufgeraffte vorstellen. Andere, die besser als ich in diese Gattung von Texten eingearbeitet sind, werden gewiß noch weiteres dazu beitragen können, so außer dem Meister *Fr. Thureau-Dangin* besonders noch *L. Legrain* in Paris, dessen „Le Temps des rois d'Ur" Paris 1912 (Ausgabe von 390 Nummern aus Drehem, nebst Einl. und Indizes) geradezu als eine vorbildliche Leistung bezeichnet werden darf, und vor allem mein Freund Pater *Anton Deimel* in Rom (Professor am Istituto Biblico), der während des Krieges in seiner unfreiwilligen Muße hier in München ein großartiges Lexikon zu den Wirtschaftstexten der Epoche des Lugal-an-da (und Uru-ka-gi-na), der des Sargon (usw.) von Agade und der der Könige von Uri[2] im Manuskript vollendet hat und der mir in seiner großen Liebenswürdigkeit schon jetzt zu Niesens Buch einige wertvolle Verbesserungen zur Verfügung stellte. Übrigens kann ich schon jetzt sagen, daß die vollständige systematische Durcharbeitung aller bis jetzt bekannten Lugal-anda- und Uru-

[1]) Ich erwähne diesen Umstand hier deshalb, weil durch die von mir nachgewiesene enge Verwandtschaft des Alttürkischen mit dem Sumerischen jeder neue Beitrag zum alttürkischen Wortschatz auch von Assyriologen mit Freuden begrüßt werden muß. Die oben erwähnte Arbeit hat meine Zeit vom Herbst 1918 ab bis jetzt vollständig in Anspruch genommen. Bei dieser Gelegenheit erwähne ich, daß meine 1915 autographierte Broschüre (32 enggeschriebene Seiten in Folio) „Zweihundert sumero-türkische Wortvergleichungen" jedem Interessenten nach vorheriger Einsendung von 30 Mark in Deutschland (Schweiz usw. von 13 Frank, Amerika von $2^1/_2$ Dollar, England von 10 Shilling — in die augenblickliche deutsche Valuta umzurechnen) frankiert von mir zugestellt wird. Der frühere Preis von 10 Mark ist bei dem trostlosen Stand des deutschen Geldes leider nicht mehr aufrecht zu erhalten.

[2]) So, Uri, ist wohl besser als Ur zu schreiben, da der Name (vgl. URU-UNU-KI-MA, bzw. *Sis-unu-ki-ma* oder *Sis-ab-ki-ma*) aus *Urin, Urim* (daher die Verlängerung *-ma*) abgeschliffen ist. Vgl. meinen Grundriß, S. 373. Das Zeichen *sis* hat ja die Lautwerte *urin* und *uri*.

ka-gi-na-Urkunden, wie sie Pater *Deimel* in Angriff genommen, für die Sumerologie eine ganz neue Ära heraufführen wird; die wohl noch zahlreicheren Wirtschaftstexte der Zeit der Könige von Uri kommen an Wichtigkeit, da sie ja bereits aus einer viel späteren Epoche sind, natürlich erst an dritter Stelle (die zweite bilden als Mittelglied die Urkunden der Zeit von Agade), sind aber als Ergänzung und Weiterentwicklung zu den ersteren immer noch bedeutsam, zumal in lexikalischer (weniger allerdings in grammatischer) Hinsicht — Grund genug, jede neue Sammlung, wie z. B. die mustergültig edierte vorliegende[1], mit lebhafter Freude zu begrüßen.

Besondere Bewunderung aber verdient es, daß ein Mann, der bereits im reiferen Alter steht, lediglich, weil er den lobenswerten Ehrgeiz hat, die von ihm und seiner leider im September vorigen Jahres ihm durch den Tod entrissenen Gattin erworbene „Sammlung Nies" nicht in fremde Herausgeberhände zu legen, mit echt amerikanischer Energie sich als Autodidakt in das so schwierige Gebiet der altbabylonischen Keilschriftkunde (und in die Assyriologie überhaupt) einzuarbeiten. So ist er Mäzen und zugleich Forscher und Editor geworden. In den geschilderten Umständen liegt aber auch die Entschuldigung dafür, daß noch manche außer mir in seiner Beschreibung und teilweisen Übersetzung der Texte S. 37—79 und in den ausführlichen Indizes (S. 80ff.), besonders in dem fast zu ausführlichen Glossar („Index of words and phrases") S. 115 bis 172 eine Nachlese von Verbesserungen[2], was die Übersetzung und Erklärung (auch hier und da die Umschreibung) der einzelnen Ausdrücke anlangt, werden beibringen können. So habe ich denn mit gutem Gewissen seinerzeit die Aufnahme dieser Ausgabe in die „Assyriologische Bibliothek" empfehlen können und bereue dies auch heute nicht.

Meine Bemerkungen beginne ich mit einem kurzen Exkurs über die auch von Nies S. 3 angenommene zur Zeit übliche Datierung der Uri-tafeln auf 2400 v. Chr. (Dungi bis Ibi-Sin nach Thureau-Dangin 2456—2358). Dieser Ansatz beruht auf der Voraussetzung, daß die zweite Dynastie von Babel, die in Wirklichkeit gleichzeitig mit der ersten und dritten Dynastie ist, mit ca. 175 Jahren verrechnet wurde. Nach Thureau-Dangin, La Chronologie des dynasties de Sumer et d'Accad (Paris 1918) stellt sich die Chronologie von der vierten Dynasti von Uri ab in folgender Weise dar:

Uri iv:	2474—2358	v.	Chr.	(statt	2299—2183)
Nisin:	2357—2131	„	„	(„	2182—1956)
Dyn. A, 1: Sumu-abu (Su-abu)	2225—2212	„	„	(„	2050—2037)
Dyn. A, 2: Sumu-la-ilu (Sulili)	2211—2176	„	„	(„	2036—2001)
Dyn. A, 6: Hammurapi	2123—2081	„	„	(„	1948—1906)
Dyn. A, 10: Ammizaduga	1977—1957	„	„	(„	1802—1782)
8. Jahr	1970	„	„	(„	1795)
Dyn. A, letztes Jahr	1926	„	„	(„	1751)
Dyn. C (Kassiten)	1740ff.				

Mit Thureau-Dangins Ansätzen stimmen nun zusammen folgende Angaben der neubabylonischen Chronographen:

---

[1]) Ebenso sorgfältig herausgegeben sind die beiden Bände der Miß *Hussey*, während die drei Bände *Bartons* (vgl. dazu *Engelb. Hubers* P.-N., S. 207) leider an Ungenauigkeiten reich sind.

[2]) Es muß übrigens bemerkt werden, daß schon Rev. Nies selbst im Glossar vieles richtiger gestellt, so daß man also die „Translation and Summaries" nicht einseitig, ohne das Glossar nachzusehen, benutzen und kritisieren darf. Die Hauptsache für den Forscher bleibt ja doch immer die genaue Wiedergabe des Textes auf den Tafeln und die nur selten zu verbessernde Konkordanz der Stellen im Glossar, die alles Wichtige aufzufinden ermöglicht.

1. Sargon von Agade nach Thureau-Dangin[1] 2845 bis ca. 2800, und (nach Nabonid) sein Sohn Naram-Sin 2300 (?) + 550 = 2850 (im Text steht die Verschreibung 3200, wofür möglicherweise 2200 zu korrigieren ist, dann 2200 + 550 = 2750, was fast genau stimmen würde, zumal nach der Cyperninschrift Sargons II. Sargon von Agade eine Mondaera vorher, das wäre 2160 Jahre vor 722 = 2882 v. Chr., regiert haben soll).

2. Hammurapi ca. 700 Jahre vor Burnaburias, das wäre ca. 1400 v. Chr. + 700 = 2100 v. Chr.

3. Die Schwester Rim-Sins (des Zeitgenossen Hammurapis) nach der 1912 signalisierten Inschrift Pater Scheils 1500 Jahre vor Nabonid, also 550 + 1500 = rund 2050 v. Chr.

Mit diesen Angaben stimmt auch die dem Berosus vorgelegene neubabylonische Notiz, wonach der Anfang der Dynastie A 2221 v. Chr. anzusetzen gewesen wäre. Und endlich scheint dies ganze System wunderbar bestätigt durch die glänzende Entdeckung Pater *Kuglers*, wonach statt des von Kugler für 1970 v. Chr. astronomisch berechneten Venusomens Virolleaud, Istar XII, Z. 21 der assyrische Schreiber das Datum des achten Jahres des Königs Ammizaduga (s. oben) in den Text gesetzt hat.

Gegenüber dem allem steht aber die viel ältere Angabe des um 1300 v. Chr. regierenden Assyrerkönigs Salmanassars I., wonach Erišu, ein alter König von Assur, 739 Jahre vor ihm den Tempel Assurs restaurierte, d. i. ca. 1300 v. Chr. (genau nach Weidner 1280—1260 v. Chr.) + 739 = 2039; Erišu (Irišum) aber war nach der Angabe der von Mr. King publizierten Chronik ein Zeitgenosse des ersten Königs der babylonischen Dynastie A, des Su(mu)-abu, wodurch also eines der Anfangsjahre dieser Dynastie als ca. 2039 v. Chr. mitbestimmt ist. Das wird durch die davon ganz unabhängige Angabe einer kurz von dem Weltkrieg in Assur gefundenen Inschrift des Tukulti-Ninib I. (des Sohnes des Salm. I.) ca. 1260 v. Chr. bestätigt, wonach der Istartempel in Assur 13 Sossen = 780 Jahre vorher, also c. 2040 v. Chr. Geburt (oder auch 20 Jahre früher, da 13 Sossen eine runde Zahlangabe ist, also demnach auch ca. 2060) von Ilu-šumma (dem Vater des oben besprochenen Erišu) erbaut worden ist[2].

Also sind meine oben in Klammern neben die Zahlen Thureau-Dangins gesetzten Ansätze (von denen Weidner nur um die geringfügige Zahl 7 differiert, indem er den Sumu-abu 2057—2043 setzt) die richtige alte Chronologie, und alle die andern, um ca. 175 Jahre erhöhten Zahlen, beruhen auf *einem späteren*, in seinen Wirkungen etwa von der Zeit Sargons II. von Assyrien an erkennbaren, also wohl kurz vorher entstandenen, *chronologischen System*, unter dessen Bann auch der Schreiber der Kujundschiktafel R. 160 (3. R. 63, = Virolleaud, Istar XII) stand, vorausgesetzt, daß Pater Kuglers astronomische Berechnung, was ich zunächst nicht bezweifle, richtig war. Denn es ist doch ganz klar, daß das jetzt im Text stehende Datum des achten Jahres Ammizadugas („im Jahr da er einen Thronsitz aus Gold usw.") ursprünglich eine am Rand stehende Schreiberglosse war, die dann zu Asurbanipals Zeit irrtümlich in den Text selbst geraten ist.

Nach all dem Ausgeführten sind also nun auch durch einfache Zurückrechnung die Daten der vierten Dynastie von Uri entsprechend zu reduzieren, so daß sie sich also folgendermaßen darstellen würden:

---

[1]) Diese Angabe ist gewonnen, indem nach der neuentdeckten Königsliste (Pater Scheils und Arno Poebels) vom achten Jahr Ammizadugas 1961 bzw. 1970 v. Chr. (Pater Kuglers Berechnung und ihm folgend Thureau-Dangin) einfach zurückgerechnet wurde. In Wirklichkeit wird Sargon wohl 2670 bis ca. 2625 und sein Sohn Naram-Sin ca. 2575 (rund 2600) anzusetzen sein.

[2]) Siehe Ernst F. Weidner, Studien zur ass.-bab. Chronol. (Leipzig 1917), S. 21.

Ur-Gur[1]	2299—2282	(Th.-D.	2474—2457)
Dungi	2281 - 2224	(„	2456—2399)
Bûr-Sin	2223—2215	(„	2398—2390)
Gimil-Sin	2214—2208	(„	2389—2383)
Ibi-Sin	2207—2183	(„	2382—2358)

also in runden Zahlen die genannten Könige (mit zusammen 117 Jahren) ca. 2300 bis 2200 v. Chr.[2]!

Bevor ich nun, nachdem ich der ganzen Textserie ihren richtigen chronologischen Platz angewiesen, auf die verschiedenen philologischen Einzelheiten zu sprechen komme, möchte ich kurz auf die interessanten S. 37—43 (und vgl. noch S. 63, Nr. 73A, S. 78, Nr. 167 und 169, und Tafel 34, Nr. 70A) reproduzierten bildlichen Darstellungen auf Siegeln aufmerksam machen. Außer dem Wappenvogel von Lagasch, der achtmal begegnet (mit und ohne Mondsichel daneben), treffen wir in Nr. 6 einen schwimmend dargestellten Vogel, anscheinend eine Ente (oder Gans?), als Emblem einer sitzenden Göttin; vielleicht soll aber (beachte den für Ente oder Gans fast zu langen Hals) ein *Schwan* (sumerisch *ki-sag-sal*, nach *Delitzsch* „Silbervogel", semitisch *igirû*, so in Senacheribs Inschriften, und zwar als Vogel, dessen „Ort fern ist", bezeichnet) gemeint sein, wie er deutlich auf dem Amherst-tablet (ed. *Pinches*), Nr. 15 (auch Zeit der Könige von Uri) uns, ebenfalls als Emblem einer Göttin, entgegentritt. Also die Schwanenjungfrau auch schon im babylonischen Altertum![3] In Nr. 26 und wohl auch in Nr. 11 sehen wir den Gott Nin-giš-zidda, aus dessen Schultern Drachen wachsen. In Nr. 9 sind die Drachenkämpfer (beide im Profil statt von vorn) nicht Gilgames und Eabani, die deutlich in Nr. 18 auftreten, sondern nur verwandte Gestalten; der links mit der Locke scheint den sog. jungen Gilgames (sonst mit fünf Locken) der ältesten Siegelzylinder darstellen zu sollen. In Nr. 26 scheint das links unten angebrachte vierfüßige Tier ein Hund zu sein, kaum ein Schwein, da für letzteres der geringelte Schwanz typisch ist. Endlich ist als mythologisches Novum hervorzuheben die Nummer 27. Der caduceus

---

[1]) So besser als Ur-Engur zu transskribieren. Die in den Götterlisten angegebene Lesung Engur der alten Göttin Gur (Apsû, Mutter des En-ki) beruht nur auf einer Spielerei der babylonischen Gelehrten, nämlich auf einer Zerlegung des Femininums Gur in einen männlichen En-gur und eine weibliche Nin-gur.

[2]) Auch die bekannte Angabe Asurbanipals, wonach 1635 Jahre (Var. 1535, beachte aber die Schreibung: 2 Neren, 7 Sossen, 15 Jahre) vorher der Elamiterkönig Kudurnanchundi das Bild der Göttin Nanai aus Erech fortgeschleppt hatte, also ca. 640 + 1635 = 2275 v. Chr., ist vielleicht um 175 Jahre zu reduzieren — dann 2100 vor Chr.; doch hängt das noch von andern historischen Erwägungen ab, wozu man *Strecks* Assurbanipal, II, S. 58, Anm. 4 (nach Dungi?) vergleiche.

[3]) Vgl. auch die Schwanenfrauen der sibirisch-türkischen Märchen bei *Radloff*, Versuch II 883. Der Name *igirû* bei Senacherib weist auf ein sumer. *igir* (aus *gigir*? vgl. analog *gigim*, *igim*, *idim*, sem. *eṭimmu*, S. b 51, der verklärte Totengeist) zurück, was dann gewiß etymologisch mit alttürkisch *qoġu* (*Thomsen* J. R. A. S. 1912, S. 203, und vgl. Kashgaris Divan 3, 170, 15 und 182, 7), ferner mit *κύκνος*, cygnus, und wohl auch mit germ. *swan* (aus *kuwan* und dies aus *kuġan*?) zusammenhängt. Übrigens steckt wohl auch im ersten Element von *ki-sag-sal* „Schwan" das oben genannte türk. *ku* (so neben *kuġu* bezeugt), da ja *sag-sal* sonst Sklavin, Mädchen, Weib bedeutet, also *ki-sag-sal-ġu* wörtlich Schwanenweibchen-vögel, während in *ki-sag* „Silber", wohl das (gewöhnlich *azag* geschriebene) Wort *ku* „Silber" und vielleicht *sag* Erstling (also dann Feinsilber?) zu suchen sein dürfte, falls nicht auch *ki-sag* ursprünglich Schwanenmännchen und dann erst *kisag* „Silber" (als Übertragung wegen der weißen Farbe) bedeutete. — Die auch von *Meißner*, Ass. Stud. V (1911), S. 20, Anm. 2 angenommene Bedeutung Schwan des Wortes *ki-sag-sal-ġu* = *igirû* stammt von *Delitzsch*, Assurbanipal, Leipzig 1909, S. 18 („doch wohl Schwäne"). Da der Schwan, ein nördl. Vogel, bis südl. vom Kasp. Meer hin überwintert, so scheint auch mir *Delitzschs* Erklärung die einzig mögliche, zumal es sich ja bei Senacherib deutlich um fremde, auf den Inseln des vom König angelegten Parkteiches angesiedelte Vögel (also deutlich Wasservögel) handelt; das wird nun durch die Etymologie erfreulich bestätigt.

rechts ist die schematische Darstellung des oft als Standarte verwendeten Zwillingsdrachen der Grenzsteine (mit der Lichtscheibe zwischen den beiden Köpfen), zwischen der Göttin und dem Anbeter aber sehen wir eine Schlange, die aus einem flammenden Hügel auffährt (vgl. die feurigen Schlangen Num. 21, 6 u. ö.).

Wenn ich nun zu den Texten, insbesondere zum Glossar, übergehe, so will ich zuerst, da ich einmal bei den Tieren (Schwan, Hund, Schlange der bildlichen Darstellungen) bin, gleich auch einige interessante Tiernamen behandeln.

Az 123 und 142 ist ganz gewiß nicht Leopard, sondern, wie schon die Zusammennennung mit *ur-ku* (= *kalbu*) beweist, „Hund" und zwar im Gegensatz zu *ur-ku* (lies *ur-dùr*, vgl. 171, 5 *ur-dùr-ra*[1], d. i. Hund mit Halsband, vgl. *Legrain*, S. 156) der ungezähmte Hund, Feldhund (opp. Haushund). Höchstenfalls könnte man noch an den vom Leoparden ganz verschiedenen, zu Jagdzwecken gezähmten „Jagdleoparden" (arab. *fahid*) denken, zumal *az* bei Legrain gewöhnlich als mit Gazellen eingebracht erwähnt wird. Vgl. auch *Legrain*, S. 18 (S. 125 fehlt das Wort), wo 34 statt 38 zu lesen und noch 109. 110 und 370 hinzuzufügen ist.

Das von Nies S. 115 mit „conceive" übersetzte *a* heißt eigentlich „bespringen, besprungen werden" (vgl. auch 4 R. 11, 41 *kur-šù ba-A* = *šadâ irkab* und *kur-šù ba-an-da-A* = *šadâ ir-ta-kab* er bestieg den Berg, also reiten, besteigen). Dann wird es auch da, wo von Kreuzung von Schafen und Ziegen mit Wildschafen und Wildziegen (bzw. Steinböcken) die Rede ist, gebraucht, z. B. in den Ausdrücken *síl a udu-ǵar-sag* Legr. 210, 5 (*udu-ǵ.* wörtlich Bergschaf) und *maš-gal a dara* Legr. 182 (dort auch *sal-ašqar a-dara*; vgl. *dara* = *turâḫu* Steinbock), oder *síl-ga* (Sauglamm) *a udu ǵar-sag* 204, 1, oder *sal-síl a udu-ǵar-sag* 209, 7 — als wertvolle Auffrischung der Rasse. Von dem Ausdruck *a-dara* stammt nun auch das daraus neugebildete Wort *atrû* (Ideogramm *á-dara*) C. T. 17. 9, 25 (*udu á-dara* = *im-mir at-ri-e*) und Haupt, Keilschrifttexte, Nr. 12, 2 und 29 (ebenso Sm. 1022) *udu á-dara*[2]. Und ebenso wird wohl auch *aslu* „Wildschaf"[3], trotzdem das Ideogramm nicht *a-síl*, sondern *e-lu* ist, ursprünglich von *a* + *síl* herkommen. Andrerseits gehört *lu* in *e-lu* (= *aslu*) zu *lu* in *lu-lim*, semitisch *lulimu*, Ideogramm REC. 229, was auf keinen Fall (so *Nies*, S. 153) „Kamel" heißt, sondern nur Schaf, Widder (fem. und mask.) bedeuten kann[4]; auch *e-lu* wird zu den mit vorgesetztem *a* (kreuzen, bespringen) zusammengesetzten Namen[5] gehören (aus *a-lu*, s. schon S. 201 Anm. 3) und das gleiche darf

---

[1]) Es ist zu beachten, daß *ur-ku* mit *ku* = *šù* geschrieben wird (also ist auf keinen Fall *ur-ku* gesprochen worden) REC. 468; so z. B. auch *šù-mal* (älter *šù-gar*) = *agru* Mietssklave (sprich ebenfalls *dùr-gar*?)

[2]) Daher wohl auch die Kriegsmaschine *at-ta-ra-te* Sen. 6, 56, wozu man unsere mittelalterlichen „Sturmböcke" vergleiche. Zu *á-dara* vgl. auch noch King, Cat. Suppl S. 180, Nr. 1868 (K. 15336) und zu *a-dara* das synonyme *a-síg* Anm. 5.

[3]) Vgl. dazu *Thureau-Dangin*, La 8. camp. de Sargon (Paris 1912), p. 24, note 2 und besonders *Zimmern*, Ritualtafeln, Nr. 100 (S. 216f.). Das Ideogramm ist *e-lu* (*ilu* oder *ölo*, aus *a-lu*?), wo *lu* eine Verkürzung aus *lum* zu sein scheint.

[4]) Das Ideogramm ist aus *anšu* Esel (urspr. *šagan* „Muttertier", dann erst Eselin) mit beigeschriebenem *im* (Zeichen *ši*) und *lu* zusammengesetzt. Das gewöhnliche Ideogramm für Esel ist das gunierte Zeichen REC. 226; das ungunierte Zeichen (REC. 224) bedeutet urspr. Sandale (*šakan*), daher die Ideogrammverwechslung. Ganz ähnlich ist das Zeichen REC. 228 zusammengesetzt, nämlich aus REC. 224 und beigeschriebenem *lim*; Lesung *alim* (vgl. neuassyrisch *gir*, bzw. *šakan*, mit eingeschriebenem *a-lim*), semitisch *kabtu* (arab. Lehnwort aus *kabšu* Widder, Leithammel), *ditânu* (Wildschaf?), dann übertragen auf *šarru* König und auf den Gott Enlil (urspr. wohl auf Ea, vgl. *Asaru-Alim-nun-na* = Marduk, wo Alim-nun-na = Dara-nun-na, also „Asaru des Ea" = Marduk; vgl. zu allem Überfluß C. T. 24, 14, 31 *Alim-nun-na* = *ilu É-a*).

[5]) Zu diesen ist auch noch das bei *Legrain* des öfteren belegte *a-sig* (*síg* Wolle, aber auch statt *sig* = *atûdu* Bock) zu fügen (so nach *úz*, *sal-ašqar* und *máš*).

wohl von *alim* (s. S. 200 Anm. 4) in seinem Verhältnis zum einfachen *lim* gelten[1]). Letzteres aber ist gewiß nur eine hellere Aussprache (bzw. eine Differenzierung) von *lum*, welches, was bisher nicht erkannt worden war, in der Verbindung *udu a-lum*, *ganam a-lum*, *síl a-lum*, ebenfalls in diesen Zusammenhang gehört; da *a-lum* gleich *udu-ǵar-sag* nur nach Schafnamen[2]), *a-dara* gleich wie auch *a-síg* nur nach Ziegennamen steht, so muß also *lum* ein Synonym von *udu-ǵar-sag* (Bergschaf, Wildschaf) sein, wie andrerseits *síg* (siehe S. 200 Anm. 5) ein Synonym von *dara* Steinbock ist. Zur Etymologie von *lum* vergleiche man Haupt, Keilschrifttexte Nr. 12 (ohne semit. Übers.), obv. 2 [*udu á-dara a*] *su síg-lum-suǵur* (= *šeš-suǵur* = *munšub*) *-bi lumlum* „dem Wildziegen-bock sein zottiges Fell sprießt ihm" (vgl. schon oben im Text und S. 200 Anm. 2), wozu noch zu bemerken, daß hier eine poetische Übertragung vorliegt (der Ausdruck *udu á-dara* ist ja nicht aus den alten Wirtschaftstexten belegt), da *udu* zum Schaf- und *dara* zum Ziegengeschlecht gehört und eine Kreuzung beider sonst noch nirgends bezeugt ist[3]). Da *lum* ursprünglich auf das üppige Wachsen des Haares des Wildschafs zurückgeht, so halte ich es für erwägenswert, ob nicht das türk. *jong* Wolle damit identisch ist (vgl. als Analogie zu *lum* Haarwuchs und Wildschaf auch *sig* Wolle und Steinbock), so daß dann die Grundform etwa *nug*, *lug*, *lung* wäre; geht ja doch auch *kusarikku* (= *alim*, *gud-alim*, ein sumerisches *kusar* voraussetzend) Widder auf alttürk. *kočangar*, *kočgar*, *kočar*, *koč* Widder, und was für die sumerisch-türkische Sprachvergleichung noch wichtiger ist, *ašqar* (in *sal-ašqar* Ziege) auf uigurisch *arqar* (Maḥmud al-Kaschgaris Sammelbuch 1, 106, 10; 184, 10 und 1, 352, 15, danach Weibchen des Steinbocks, erst später auf eine Wildschafrasse, vgl. mong. *argali*, übertragen) bzw. umgekehrt (*arqar* durch Rhotazismus aus *ašqar*), zurück. Zum Ganzen nun noch, als Ertrag für die Urgeschichte der Schafrassen, die bemerkenswerte Tatsache, daß wir in Ägypten wie in Babylonien in ältester Zeit zwei Rassen finden, einmal eine mit horizontal abstehenden, korkzieherartig ausgezogenen Hörnern, und dann die uns geläufige mit einwärts gebogenem (halbmondförmigem) Horn. Die erstere ist das ägyptische Schaf des alten Reiches (äg. *sr*, *sj*, wozu nach Dyroff das koptische *esoou*, *esau*, plur. *jesoou* gehört, also wohl *sr* = *esro* oder ähnlich), schon auf einer uralten Vase, *Capart*, p. 115, fig. 82, dann in Medum, pl. XVI und XXI, im Grab des Ti in Sakkara (und als Göttersymbol, Chnum und der sog. Bock von Mendes, bis in die späteste Zeit beibehalten) und vgl. zum Wort *sr* Pyr. (ed. Sethe) 252b. 1726b, welche Rasse vom mittleren Reich ab durch das sog. asiatische Schaf teilweise oder ganz verdrängt wird; auch in Babylonien war es die ältest nachweisbare Rasse, wie ich aus dem Relief des Ur-Enlil von Nippur, Hilprecht, B. E., I, 2, pl. XVI, Nr. 37 (wiederholt in Hilprechts Explorations, p. 417, in meiner Gesch. des alten Morgenlands, 3. Aufl., Neudruck von 1912, S. 38, und in Jastrows Bildermappe, Tafel 27, Nr. 81) und aus einem vorsargonischen Siegel (Doc. Présarg., pl. VII, 14; Rev. Ass. VI, pl. VII Sceau de Bara-nam-tar-ra, femme de Lugal-an-da) nachweisen kann. Auch die zweite Rasse (in Ägypten vom mittleren Reich ab neu aus Asien eingeführt) war, wie es

[1]) Bei Gudea Cyl. B. 6, 4 (= 7, 5) und 10, 4 und 7 ist von den Milchzicklein des *lulim*, bzw. von der Ziege (*uz*), welche die *lulim*-Zicklein (*máš-lulim*) säugt, die Rede — also hier eine Übertragung vom einen Kleinvieh (Schafe) auf das andere (Ziegen). Beide Bestandteile des Wortes *lulim*, sowohl *lu* (vgl. oben *e-lu* = *aslu*) als *lim* (vgl. *alim* = *kabtu*, s. S. 200 Anm. 4), weisen aber auf eine urspr. Bedeutung wie Schaf, bzw. Wildschaf.

[2]) Vgl. auch noch *e-lum* (aus *a-lum*, wie *e-lu* = *aslu* aus vorauszusetzendem *a-lu*), semitisch *kabtu* „Widder". Zu *kabtu* aus arab. *kabš* vgl. neubabyl. *il-te'ri* aus *il-šahr* (der Mondgott) und *il-tammiš* aus *il-šams* (der Sonnengott), vielleicht auch *takiltu* violettes Purpur aus arab. *aškalu* eine Nuance von rot.

[3]) Vgl. das hübsche Büchlein M. *Hilzheimers*, Die Haustiere in Abstammung und Entwicklung (mit 1 Tafel und 56 Abb.), Stuttgart 1909 (3 Bl. und 126 S. in Oktav), S. 104.

scheint, von Alters her neben der ersten zu Haus, da auf ihr Horn die babylonische Hieroglyphe für *si* „Horn", die im Zeichen *má* Schiff (wohl als Horn des Schiffs = Schiffshinterteil) mitenthalten ist, zurückgeht, und ist dann auch bald dort die gewöhnliche geworden (vgl. die Abbildungen, z. B. bei Hilzheimer, S. 97, Abb. 42 das assyr. Fettschwanzschaf, oder mittelbabyl. den Widder des Ea auf den Grenzsteinen, dort auf dem Rücken des Fischbocks, z. B. Hinke, Boundary Stone, p. 102, fig. 36). Das Bedeutsamste dabei ist nun, daß das ägyptische alte Wort *sr* (kopt. *esoou*) zweifellos mit babylonisch *sil* Lamm (semit. *buḫâdu*, was ich längst zu äg. *bḫs* Pyr. 1348. 1029. 1865. 771 u. ö. „Kalb" gestellt), bzw. (wie der kopt. Vokalvorschlag nahelegt) mit dem daraus abgeleiteten *aslu* (s. oben) identisch ist. Da *sil* Lamm ganz gut auf älteres *sur*, *sul* zurückgehen kann, so ist vielleicht dschagataisches *soi* in *soiγun* Antilope, Wildziege dazu zu vergleichen[1]). Auch das gemeintürkische Wort für Schaf, *qoi* (auch *qoin*) hat seine sumerische Entsprechung, nämlich im Schafnamen *gukkal* (wie das Ideogramm *udu-ǵu* beweist, aus *gug-ǵul*), woneben ja (vgl. Nies 91, 353 und 135, 3, Legrain 79, 9 und 96, 3) der ähnlich gebildete Schafname *ganam-ǵul* steht; also muß es ein sumerisches Wort *gug* Schaf = *udu* Schaf gegeben haben. Wie sehr aber die einzelnen Ausdrücke oft ineinander übergehen, lehrt das Ideogramm für Schaf (Schafhürde, nämlich ein Viereck mit zwei eingeschriebenen Ochsenköpfen, also urspr. Rinderhürde) oder das Ideogramm für *udu* Schaf, nämlich ein Viereck mit eingeschriebenem Zeichen *máš* Zicklein; vgl. auch das Anm. 1 besprochene sum. *amar* Wildstierjunges (von *am* Wildstier) und seine Ableitungen, oder die nun wohl nicht mehr zu kühne Vergleichung von *dara* Steinbock mit türkisch *tana*, *taja* Kalb, junge Kuh, wo wenigstens eine entferntere Verwandtschaft (ein *dan*, *dar* mehr allgemeiner Bedeutung, vielleicht Junges von Rindern wie Wildziegen) vorliegen dürfte (S. übrigens auch noch nachher).

Da damit nun einmal der Übergang zum Rind (*gud*) gegeben ist, so sei hier gleich auf das erst von Pater *Deimel* richtig analysierte Ideogr. Sign List 261 (REC. 268), was nichts mit *ub* zu tun hat, sondern aus *lid*, *áb* Kuh und *tág*, *kid* (REC. 175) entstanden ist, hingewiesen (im P. N. *Ur-sag-x-ki*). Pater Deimel verweist mich dazu auf Hussey II, 52, obv. 5f. *su gud-x*, also hier deutlich eine Kuh-art. Wenn, wie ich vermute, der O.-N. *Sag-da-na-ki* nur eine phonetische Schreibung von *Sag-x-ki* ist, so hätten wir hier das zu türkisch *tana* gehörende sumerische *dana* (junge) Kuh, was natürlich dennoch mit *dara* Steinbock entfernt verwandt sein könnte (Differenzierung: *dara* Steinbock, *dana* junge Kuh, vgl. analog *nir* Herr, *nin* Herrin, *gur* Knecht, *gin* Magd, oder *gar* Licht, *gan* Dunkel (als weibl. Prinzip im Gegensatz zum männl. Licht!) u. ähnl. Beispiele); *Sag-dana-ki* wäre dann ein ähnlicher O.-N., wie das heutige Maral-baši (Steinbock-kopf) östlich von Kaschgar, alt Kučangar-bašï[2]).

Ein bei Schafen wie Rindern oft gebrauchtes Wort ist das von Nies für ein Verbalpräfix gehaltene *im-ma*, welches nach Pater Deimel mit Verweis auf Inventaire IV, 7178a (dort: sechs mit Gerste gemästete alte Rinder hat er aus dem vorjährigen Be-

[1]) Uigurisch *sürük* Herde gehört dagegen zunächst wohl zu sum. *šurim* Schafhürde (Ideogramm *ganam* Schaf), während uig. *sïγun* Maralhirsch (vgl. auch *sïγïr* Kuh, Ochs) wohl zu sum. *sig* Bock zu stellen ist. Uig. *maral* Hirsch (besser Steinbock? vgl. den O.-N. *Maral-bašï* = *Kučangar bašï*) ist Weiterbildung von sum. *amar* Wildkalb, Steinbockjunges (vgl. auch noch sum. *marun* Schafhürde und osttürk. *maraš* Schaf).

[2]) Siehe die vorige Anmerkung. Was die Gleichsetzung von *Sag-da-na* mit *Sag-* REC. 268 *-ki* anlangt, so ist sie um so wahrscheinlicher, da sich die ideogrammatische Schreibung nur gewissermaßen versteinert in P. N. zeigt (z. B. noch in *Lù-Sag-x-ki* C. T. 1, 13 rev. 2, 9), während der O.-N. *Sag-da-na-ki* in diesen Texten ganz gewöhnlich ist, P.-N mit *Sag-da-na-ki* aber selten sind (z. B Nies 56, 65 *Lugal-Sag-da-na-ki*). Vgl. auch den Frauennamen *Da-na*.

stand gekauft, VI *gud še sun im-ma-ta šam-a*) und andere Stellen als „vorjährig" (opp. *mu-a* heurig) zu übersetzen ist. So auch *im-ma al* vorjährige, trächtige (*al*) Kuh Gud. Cyl. B. 4, 8 (ich selbst dachte früher an semit. *immar* Lamm), wozu nun K. 2485 + 3898 (Anf. einer Hymne) *im-ma al-la* = *lit-tum* Kuh als Bestätigung kommt.

Der schon von Nies, S. 163 richtiggestellte Ausdruck *sìg* (Wolle) *-gi-ga-zum-ag* (= *pusikku* H. W. B. S. 532), wofür Inventaire II 892, 3 *sìg giš-ga-zum-ag* steht[1]), bedeutet gehechelte oder gezupfte Wolle und enthält einen Instrumentnamen *ga-zum*, der wohl semitischen Ursprungs ist. Vgl. das Synonym *sìg-giš-zal* = pusikku einerseits, und *zal* (oder *ni*) = *ga-ṣa-ṣu* Catal. Suppl. p. 50 andrerseits. Also: mit dem *ga-zum*-Instrument gemachte (*ag*) d. i. gehechelte Wolle. Solche Lehnwörter haben auch sonst die Mimation, z. B. *gar-ra-du-um-bi* = *qar-rad-su nu* Haupt, K. T., Nr. 10, rev. 25/26 oder *za-pa-ram* = *rigmu* oder *zi-ri-gum* = *zi-ri-ḳa* Del., Sum. Gl., S. 285 und 286. Vgl. zu *giš-zal* vielleicht *gisallu* H. W. B., S. 202. — Zum Berufsnamen *gu-za-lá* vergleicht mein im März 1919 der Wissenschaft entrissene Schüler Wilh. Foertsch in O. L. Z. 21 (1918), Sp. 185 glücklich das nach Landsberger, Kult. Kal. 89, Anm. 3 „Schafhirte" bedeutende Wort *kuzallu*, worin dann gewiß das veraltete Wort *gu(g)* Schaf (vgl. *gukkal*, Ideogramm *udu-ǵúl* und türkisch *koi*) steckt[2]).

Mit der Viehwirtschaft hängt auch noch das mit dem *gunû* von *amêlu* Mensch geschriebene Ideogramm REC. 290 zusammen[3]), Nies 111, 1, wo es von einer toten Kuh heißt: *x-bi é-gal-šú ba-gid* „its body for the palace was cut up" (vgl. auch Pinches, Amherst Tablets 44, 1; 82, 2 und dazu Pinches S. 77, wonach es neuassyrisch 2. R. 32, 66 durch *lù še* = *mâru* „fett" wiedergegeben wäre, also wohl Körper, Leiche mitsamt dem Fleisch und Fett[4]), opp. Gebeine, Gerippe. Der gleiche Ausdruck liegt im Namen *x-tur* der Gemahlin des En-li-tar-zi RTC. 17, obv. 1 u. ö. vor (urspr. Kosename, etwa die kleine Fette, oder: das kleine Geschöpf) und gewiß auch in der Kosebezeichnung der Geliebten des Gottes En-ki, Langdons Paradise 3, 4. 7. 24. 27 *lù-tur* (hier *lù* ohne *gunû*). Zu *lù* Mensch möchte ich bemerken, daß das Sumerische zwei Wörter für Mensch hatte, die mit dem gleichen Ideogramm geschrieben werden, nämlich erstens *gal*, *gùl* (letztere Nebenform stets, wo es die Verlängerung *-lu* hat, also *gùl-lu*, nicht *gal-lu*, neusum. *mul*) und zweitens *nu*, *lú* (dialektisch auch *na* und *la*, vgl. zu *la* das Wort *nu-banda* = *labuttû*); seltnere Wörter für Mensch sind *sag* (eigentl. Kopf, vgl. unser: so und so viel Köpfe = Mann), *za* und *gíš* (woraus *uš* und *ur*), welch letzteres wohl = alttürkisch *kiši*, während *jalanguk* eine Weiterbildung von *jal* = sum. *gal* zu sein scheint (vgl. auch alttürk. *jalangus* „einzeln", wie ja auch *giš* „eins" bedeutet).

Was die *Ortsnamen* anlangt, so wurde über *Sag-da-na-ki* schon oben S. 202 gehandelt[5]). *Zum-ki* Nies 9, 4 ist wohl *Ešǵanna-ki* im Original herzustellen. Nies 84, 3 ist der als Herkunftsort des Sin-idinnam von Larsa bekannte Name *Ga-eš* verkannt: *Bur-d.-im-gál Ga-eš-šú-du* (nach *Ga-eš* gehend, vgl. 84, 6 ebenso *A-kal-la Má-gan-ki-šú gin-na*

[1]) Pater Deimel verweist mich außer auf Inv. II 892 noch auf Inv. III, 2, 6141; D. P. 75, 6 und auf Gudea, Statue B, 4, 18, eine besonders instruktive Stelle, wo das Zeichen REC. 333 (*zum* + *lagab*) mit Det. *giš* statt *giš-ga-zum* steht; also etwa *gir-zum* statt *ga-zum* (*ḳarâṣu* Synonym von *ḳaṣâṣu*)?

[2]) In Nies 52, 4 ist nach Pater Deimel *gud gukkal* wohl als „Ochsen (und) Schafe" aufzufassen.

[3]) In dem Fischnamen Foertsch 142, 2, 2 *x-na-ǵa* muß es einen auf n auslautenden Lautwert gehabt haben. Etwa *dìn* (vgl. *dím* REC. 100)?

[4]) Vgl. Legrain 277, 9 „Le cadavre dépouillé de la peau" (*x-bi*, vgl. 277, 11 *su-bi*).

[5]) Vgl. auch noch Legrain, 292, 12 f. *é Sag-da-na En-lil-ki-ka* und Reisner Tello 113, 4, 8 *é šem-bil ša(g) En-lil-ki ù Sag-da-na-ki-ka* — also in oder bei Nippur; auch Gen. Drehem 5575 wird *ša(g) é-Sag-da-na En-[lil]-ki* zu restituieren sein. Etwa gar einer der Namen von Drehem (neben *é-Bá-šá-iš-d.-Da-gán*)?

nach Magan gehend); vgl. noch das Datum, Th.-D., Königsinschr. S. 235, k und Reisn. Tello 169, 3 und Gen., Drehem 5567 rev. *ša g) Ga-eš-ki*. Falls Langdon, Paradise, col. 2, 9 *Gab-esin-ki-na* zu vergleichen, könnte man versucht sein, *Ga sin* zu lesen und es als Volksaussprache von Gab-esin anzusehen.

Den O.-N. *Ud-mú-Ešǵanna-ki*-TAG (Nies: *-šum*) möchte ich wegen der Verlängerung *-ta* bei Gudea Cyl. A, 2, 18 (vgl. den Zeichennamen *šuridu*) *Ud-má-Ešǵanna-ki-šurit* lesen; Thureau-Dangin transkribiert *Sirara-ki*-ŠUM-*ta*. *An-na-ǵi-li-bi* 111, 5 ist wohl ein P.-N. (vgl. Drehem 5526), kein O.-N. Im P.-N. *Lù-Ni-tuk-ki* 92, 29 steckt wohl zunächst nicht *Ni-tug* = Dilmun, sondern es wird *Lù-Ni-kab-ki* zu lesen sein; aber andrerseits wechselt REC. 302 (*kab, gub*, das Bild des linken Fußes) im P.-N. *Ú-tug* und in *sag pa-kab-du* mit dem Zeichen *tug* (REC. 301) von Ni-tug, so daß also vielleicht doch im Namen *Lù-Ni-kab-ki* eine veraltete Schreibweise von Ni-tug = Dilmun vorliegt. Damit stimmt auch der Name des Halbedelsteins *ḫulâlu* 5 R. 22, 14–16 *ni-ni* (id. *za-ǵín, za-num* und *za-su*) und des dazu gehörenden Berges 2 R. 51, Nr. 1 (K. 4415) *Ni-ni-kab*, welch letzteren ich früher, wegen RTC. 23 (*urud en-da an-na ǵu-si-a zabar Má-Ni-tug* „Kupfer in Mischung mit Zinn von Chu-si-a: Bronze von *Má-Dilmun*", vgl. sonst *ǵu-si-a* = *rakâbu*) als Verschreibung für Ir-kab ansehen zu müssen glaubte (Grundriß, S. 543): in *Ni-ni-kab* (das zweite *ni* ist noch schraffiert sichtbar) haben wir aber wohl auch eine archaistische (zugleich volksetymologische) Schreibung von *Ni-tug*, dessen wirkliche Etymologie (man denkt ja zunächst an *ni* Öl und *tug* besitzen) noch dunkel ist und auch nicht durch die Übersetzung *Dilmun* (aus *Dilmum*, vgl. arab. *dalâm* Schwärze, *dailam* Unglück?) aufgehellt wird, falls nicht etwa der *ḫulâlu* ein Edelstein von gerade schwärzlichem Glanz (etwa Magnesit?) gewesen ist.

Im Ortsnamenindex hätte *Ud-nun-ki* = Adab (aus *Ud-àb*, vgl. *nun* Himmelsozean = *ab* Meer) wenigstens in eckigen Klammern erwähnt sein sollen, da *Ḫa-ba-lul-é* Nies 94, 1 nach andern Quellen (Gen., Drehem 5494), wie Nies ja auch S. 67 angibt, Patesi von Adab war. Es ist ja nur Zufall, daß er bloß als *pa-te-si* (statt *pa-te-si Ud-nun-ki*) in der betreffenden Tafel bezeichnet wird. Pater Deimel macht mich auf Nik. 282 *dam pa te-si Ud-nun-ǵu-ki* (*-ka-ge*) aufmerksam, wozu man Br. 7843 *ud-nun-ǵu* = *a-ra-ab* = *ú-sa-*[*ab*], und K. 4605 [*a*]-*rà-bu-ǵu* = *a-ra-bu-ú* (nach Sp. 1, 131, obv. 48 ein Wasservogel) vergleiche; *ud-àb, ú-sa-ab, a-ra-ab* und *Adab* sind sämtlich dialektische Varianten. Also schon vorsargonisch die enge Verbindung mit dem Vogel (Wappenvogel?) der Stadt, wobei die Frage noch offen bleibt, ob der Ort nach dem Vogel oder der Vogel nach dem Ort genannt worden war; als Analogie verweise ich auf den schwarzen und weißen *Šir-bur*-Vogel = Raben (offenbar Nacht und Tag symbolisierend) der Nergalhymne Böllenrücher Nr. 7, obv. 18 und 22 (Haupts Keilschrifttexte, Nr. 20) also Rabe = Vogel von Lagaš[1].

Die Stadt *A-bi-ak*(*-ki*), deren Pa-te-si Šarrum-bani hieß (Zeit des Bur-Sin, Jahr fünf), kommt auch in der Schreibung *A-bí-ak*(*-ki*) vor, so Dreh. Louvre 5504, rev. 1, 3. Falls nicht eine andere Orthographie des Ortes Apirak[2]) am persischen Golf[3]) vorliegt (dann *A-bil-ak* und daraus *A-bi-ak*), so könnte man auch an andere Orte denken, so z. B. an *A-pa-ak*, welches indes (vgl. Grundr. S. 353 und S. 420, Anm. 2) gleich *A*(*-ki*) wohl nur eine ideographische Schreibung für Šurippak, die Stadt des *ilu A* = des Xisuthros (diese Gleichung nach Foertsch, O.-L. Z. 18, 1915, 365, und vgl. *a* = *núḫu*, daher

[1]) Vgl. dazu meinen Grundriß, S. 307 f. und S 308, Anm. 1 und 2.

[2]) Vgl. dazu Delitzsch, Paradies 231 und King, Chronicles II 9 f. 37 f. 44 f. (Naram-Sin-Omen), danach damals *Ri-iš*-ilu-*Ramman* König von *A-pi-rak* (und sein ungenannter *sukkallu*).

Noah), vorstellt[1]) oder an das aus Poebels Königsliste als alter Dynastiensitz bekannt gewordene *A-pi-an(-ki)*, als dessen König sich einmal (Scheil, Mém. X, p. 9) der alte *Bá-šá-Šušinak* (sonst šakkanakku von Elam und patesi von Susa) nach der Besitzergreifung der „vier Weltgegenden" nennt[2]). Eine Entwicklung von Apian-ki (mit mitgesprochenem Orts-dat.) zu Apiak-ki liegt durchaus im Bereich der Möglichkeit, wenn man Ašnunnak, sicher aus älterem *éš-nun-na(-ki)* vergleicht; andre derartige Ortsnamen sind (außer dem schon erwähnten Apirak) noch Akšak = Upî (aus Kêša-ki mit Vokalvorschlag), Larak, Šurippag (*Su-kur-ru-ki-ga* Legr. 349, 2), bzw. Šurippak (vgl. Gilg. 11, 23 Šurippakû = Xisuthros, bzw. *Zi-ud-sud-du*, *Zi-sud-da*, d. i. *Ut-napišti rûku*), *Zi-ma-na-ak* (Maništusu's Obelisk D 8, 12) u. a. mehr. Glücklicherweise sagt uns ein Datum von Larsa (Zuweisung noch unbestimmt) bei Thureau-Dangin, La chronologie etc. (1918, p. 40: AO. 6386, p. 39: AO. 6382), wo wir Apiak zu suchen haben, nämlich im Gebiet von Kazallu (= Namar, Grundr. S. 477 u. Anm. 2) im Quellgebiet des Oḏêm (Tornat) und Dijala (Ṭâbàn), also zwischen Medien und Elam: „im Jahr da er (Bilder der Götter) *Nu-muš-da*, *Nam-ra-at* und *Lúgal-A-pi-ak-ki* anfertigte und nach Kazallu hineinbrachte"; in dieser Richtung muß ja auch die Lage von *A-pi-an-ki* gesucht werden, vgl. oben den Bá-ša-Šušinak und ferner die schon von Poebel H. T., p. 128 angeführte Stelle einer Rimuš-inschrift „B. zwischen *A-pi-an-ki* und *Su-si-im-ki*", also Baraḫsum zwischen Apian und Susa, sowie eine Erwähnung beim alten Sargon „Beute von *Sa-bá-ki*, Beute von *A-pi-an-ki*" von den Patesis von *Ḫu-zi?-ki* und von *Gu-zal-la-ǵa-ki* (= *Ka-zal-lu* bzw. *Gú-zal lu?*).

Was nun die historische Bedeutung dieses *A-pi-an-ki* (später *A-pi-ak-ki*, *A-bi-ak-ki*) anlangt, so war es, wie schon angedeutet, in frühgeschichtlicher Zeit einmal der Sitz einer 356 Jahre lang regierenden Dynastie von drei (lies wahrscheinlich 21) über Gesamtbabylonien herrschenden Königen[3]). Die elf Dynastiensitze der Liste Poebels, incl. der Listen Hilprechts und Scheils und des erst von mir in seiner Wichtigkeit erkannten und richtig eingereihten Fragments C. B. S. 15365[4]) sind folgende:

1. Kiš, 38 (so, 30 + 10 — [2] ist zu lesen) Könige, 18000 + . . . J., viermal.
2. Uruk, 22 Könige, 2610 + . . . J., fünfmal.
3. Uri, 13 Könige, 396 J, dreimal.
4. *A-pi-an(-ki)*, 3 (lies 21?) Könige, 356 J., einmal.
5. *Bád*(?)[*-an-ki*] oder *Erim*(URU + GAR)?*-ki*[5]), 1 König, 7 J., einmal.

---

[1]) Vgl. dazu auch URU + A (REC. 361) *-ki* = Šurippag (Cyl. A 23, 30 *x-ga*!)?

[2]) Zur archaischen Schreibung *Za-pi-an(-ki)* vgl. RTC. Nr. 12—15 (Tafeln aus Fara), D. P. 1 (*za-mu-ru* statt *a-mu-ru*) und Thureau Dangins Bemerkung RTC., p. II, Note 1; es ist also zweifellos *A-pi-an(-ki)* gemeint. Eine jüngere Aussprache liegt vielleicht in *A-pi-al(-ki)* Mém. XIV, p. 89, Nr. 33 (Epoche von Agade) vor.

[3]) Der Fehler 3 ist alt, da er der Summierung der Könige nach der Flut bis Ende der Dynastie von Nisin zu 139 Königen bereits zugrunde liegt. Nichtsdestoweniger wird das Versehen bei 3, nicht etwa bei 356 liegen, wie hier nicht weiter ausgeführt werden kann.

[4]) Poebel, H.-T., p. 81, Revers, Col. 1 und 2 (= Col. 10 und 11 der größeren 17kolumnigen Tafel, von der es ein Bruchstück ist; der abgewetzte Obv. enthielt ein Stück von Col. 2 und 3, Teile von Dyn. Kiš I und Uruk I.). Col. 1 (= Col. 10) ist ein Stück der Nisin-dynastie (*Gir-ra-[i-mit-ti]*, 6. J., Sumu-abum 8 Mon., Ikûn-pi-Ištar [10 Mon.], Var. statt Girra-imitti, 7 J.; x, 6 Mon., also beide Varianten zusammen je 7 J. 6 Mon.), während Col. 2 (= Col. 11) ein Stück der das Ganze abschließenden Liste der Dynastiensitze vorstellt: Summa [11] Könige, ihre Jahre machen 125, sechsmal (regierten sie) in *[Ud úḏ]-ki-a* (vgl. zur Ergänzung die Schreibung von Upia in Scheils Liste, obv., Z. 1). Scheils Upidynastie ist wahrscheinlich die 5. oder 6. (mit 6 Königen, 99 J.); alle übrigen hatten nur je einen König mit zusammen 26 Jahren.

[5]) Vgl. Poebel, H. T., p. 101 *Bá[d]* . . . oder URU + UD . . . Dürfte man im letzteren Fall an Barton, Sum. Business Doc. 3, Col. 7, 5 (Text aus Fara) *bal Maš-ilu-Su-kur-ru*, *Erim ki pa te-si-bi* „Dyn. des M., von E. sein Patesi" denken? Andrerseits gab es einen alten König von *Bád-An-ki*, vgl. O.-L.-Z. IX, 1906, 663, Anm. 2: Sm. 655, astrol. Omen.

6. [*Ud-úġ-*]*ki-a*, [11] Könige, 125 J., sechsmal.[1])

7. [*Ud-nun-ki*, 1 König, x J., einmal] — so schon Poebel.

8. [*En-lil-ki*?? 1 König, x J., einmal]. Nur vermutungsweise.[2])

9. Agade, 12 Könige, 190 J., einmal.

10. Gutium, 21 Könige, 125 J., einmal.

11. Nisin, 11 Könige, 159 J., Var. der andern, bis Schluß von Nisin weitergeführten Rezension: 16 Könige, $225\,^1/_2$ J.

Wir hätten demnach die Dynastien folgendermaßen anzuordnen:

Kiš I 23 Könige (semit. und sum. Namen urältester Könige, deren Zahlen natürlich unhistorisch sind, die aber gewiß der Geschichte angehören), ca. 18000 J.

Uruk I, 10 Könige, 2171 J. (der 3. ist Lugalbanda 1200 J., der 4. Dumu-zi 100 J., also das Verhältnis von Jahr zu Monat; der 5. ist Gilgames 126 J.).

Uri I, 4 Könige, 171 J. (zwei sum. und zwei anscheinend sem. Namen).

Apian, 3 (lies 21?) Könige, 356 J. (die Namen abgebr.).

Bá[d-an-ki? siehe oben S. 205, 1 König, 7 J.

Upi I, 1 König.

Nippur? 1 König (s. oben).

Upi II, 1 König.

Uri II, 4 Könige, 108 J. (darunter nach Poebel wohl *An-na-ni* und sein Sohn *Lù-Nannar*).

Upi III, 1 König.

Kiš II, ca. 6 Könige, darunter wohl als erster *Me-silim* und als letzter *En-bi-Ištar*[3]),

Uruk II, 5 Könige, deren erster wohl *En-šag-kuš-an na* war[4]). Zeitgenosse wahrscheinlich Ur-Ešġanna von Lagaš.

Upi IV, 1 König (*Zu-zu*, Zeitgenosse des Eannadu von Lagaš).

Kiš III, 1 König (wohl = Eannadu von Lagaš).

Upi V, 1 König (Zeitgenosse des En-te-me-na von Lagaš).

Ud-nun-ki (Adab), 1 König, nach Poebel gewiß *Lugal-an-na-mu-un-du*; Zeitgenosse des En-an-na-du II. von Lagaš?

Upi VI, 6 Könige, 99 J.

Kiš IV, 8 Könige, 106(?) J. (die Liste hat merkwürdigerweise 586 Jahre, nach Weidner eine zyklische Zahl der die Dynastie mit 100 Jahren eröffnenden Königin *Ba'u-ellit*). An den Schluß dieser Dynastie gehören als Zeitgenossen En-e-tar-zi, En-temena II. Enlitarzi und Lugal-anda von Lagaš[5]).

---

[1]) Die Folge von 6, 7, 8 ist nur provisorisch; es könnte auch Upia, Enlil-ki und Ud-nun-ki (Adab) zu ordnen sein.

[2]) Ich denke an den alten König *Lâl-úr-alim* (Ṭâbi-utul-Enlil) Grundriß S. 351. Der Name bedeutet „Aloros (= Ea) ist der Widder(gott)", also nicht abgek. aus Lal-úr, wie Poebel will, sondern nur den Namen Lâl-úr (— *Αλωρος*) als Kompositionsglied enthaltend.

[3]) Vgl. meinen Grundriß, S. 359 unten, wo schon das ganze Resultat von Poebels IV. Kapitel (HT., p. 151—156) vorausgenommen ist; die Texte OB. 90–92 und 102ff. bilden eine einzige Inschrift.

Uruk III, 1 König, 25 J., nämlich *Lugal-zag-gi-si* (sein Zeitgenosse war *Uru-ka-gi-na* von Lagaš).

Agade, 12 Könige, 197 J.[1]); ca. 2700 v. Chr. (s. oben S. 198).

Uruk IV, 5 Könige, 26 J.

Gutium, 21 Könige, 125 J. (eine Art Hyksos-epoche der babyl. Geschichte).

Uruk V, 1 König (Utu-ǵe-gal); Zeitgenosse wohl Gudea von Lagaš.

Uri III, 5 Könige, 117 J. (Nr. 2—5 die Epoche der Nies-tafeln!).

Nisin, 16 Könige, 225 1/2 J.; zur Chronologie s. oben S. 197.

Also noch vor dem Beginn des Jahrhunderte dauernden Ringens zwischen Upia und Kiš um die Oberherrschaft in Babylonien[2]) war Apian ein alter Königssitz gewesen. Die wohl erst später anzusetzende Erneuerung dieses Reiches unter Bá-šá-Šušinak von Elam (s. oben S. 205) war offenbar nur ein vorübergehender Versuch, den die Königsliste nicht registriert hat[3]).

Nun noch einige Bemerkungen, die mir gütigst Pater Deimel zu Nies zur Verfügung gestellt hat, denen ich dann noch eine Reihe von mir selbst gemachter Verbesserungsvorschläge und Zusätze anschließen will.

Še-gur-lugal passim (am Anfang von Texten) heißt nie „best royal grain", sondern sicher nur „. . . königl. gur (von) Gerste". Denn abgesehen von vielen anderen durchschlagenden Gründen wird im Sumerischen das Adjektiv nie von seinem Substantiv getrennt. Gur of best grain müßte heißen *še lugal gur*; das findet sich nie, wie überhaupt keine Aufzählung von verschiedenen Qualitäten bei *še* (wie z. B. bei *túg* Kleid).

In Nr. 9 kein neues Datum (second year after the water of flood)! *a* nach *sa* ist Vokalverlängerung, z. B. Königsinschr. (Th.-D.) S. 232, Anm. 9 *mu-uš-sa-a-bi*. Welches Jahr gemeint ist, kann nicht ausgemacht werden; es könnte z. B. sein Dungi x + 46 (siehe a. a. O., S. 232 r) oder Gimil-Sin 6 (ebenda, S. 234, Anm. 1).

Gin-uš in Nr. 10 u. ö. ist *uku* (sonst Zeichen *mir*) *-uš* zu lesen.

Zu 14, 2 *ša(g)-ba* dabei, darunter, unter ihnen (aus *šag-bi-a*), sicher kein n. pr., sondern „statt dessen, welches nicht dabei war."

Zu 26, 5 *ša(g)-gal erim giš-ku-e durun-ba* („mit fixem Lohn").

Zu Nr. 30: *e* nach *lugal* ist Nominativ (Subjektsuffix).

Zu Nr. 41, Z. 11 é d Gigir; Z. 12: 3 *sá-dú(g) nin* (d. h. Königin); Z. 20: 4 *é-rim* (oder *kùš*)*-gub-ba* d. h. Läufer-Station (eine Art Post für den König).

Zu Nr. 42, II, 25 ff.: 30 *gú* 8 *ma-na sìg ná-maǵ-ta gú-na* 6 *ma-na* 4 *gìn-ta, sag-bi* 3 *gú* 3 *ma-na, šu-ni-gin* 33 *gú* 11 *ma-na ba-lal* d. h. 30 Talente 8 Minen Wolle (gewogen) nach dem großen (Gewicht-)Stein. (Nach dem gewöhnl. Gewichtstein *ná-si-di* gewogen) sind auf je 1 Talent 6 Minen 4 Sekel (hinzuzufügen), d. h. ($30\,^{8}/_{60} \times 6\,^{4}/_{60}$ *ma-na* = 3 *gú* 2 *ma-na* 50 *gìn*) *gú-na* = in diesem Talent. Dieser Betrag ist: 3 *gú* 3 *ma-na* (also um 10 *gìn* abgerundet, was oft geschieht). In Summa: 33 *gú* 11 *ma-na* Gewicht (nach dem gewöhnl. Gewicht, *ná-si-di*). — Z. 32 lies *lal-ni* (statt *bi*).

Nr. 48, Z. 8 *d. Nin-ug* (nicht *d. Nin-kiš*).

Nr. 49, 3 u. ö. Das Zeichen nach dem P. N. *Si-rú* ist nicht *ab*, sondern (wie

[1]) Des 3. (oder nach Th.-D. des 2.) Königs Maništusu Zeitgenosse war *Uru-ka-gi-na* II. (ein Enkel des *Uru-ka-gi-na* I.), Sohn des *En-gil-sa*.

[2]) Ein Wiederhall dieser einst von Upia gespielten historischen Rolle ist das häufige Vorkommen des deifizierten Upia als Kompositionsglied von P.-N. in der Zeit von Ṣabium bis Hammurapi.

die Lugal-an-da-Tafeln lehren) *ab* ohne den mittleren vertikalen Keil (REC. 344) und bedeutet „Mezger".

Nr. 54, 13 *šù-ka* sicher nicht „into flour" [vgl. Amherst 96, 1 und 104, 2; dazu Pinches, p. 169 *ka* hier offenbar statt *mù* „mahlen", also *še zid-ka* grain food for grinding].

57: *uš-ku* ist *gala* zu lesen; der vorausgesetzte senkrechte Keil in Sklavenlisten (*gala* sind auch Sklaven) bedeutet 1/5 *gur še* (1 *gìn azag* = 1 *gur* Gerste).

58, VI, 201: *igi-gar ag* = Zählung (Sklavenbestandaufnahme) machen, wörtlich: das Auge (darauf) lenken. [Da es auch mit *-ma* verlängert wird, möchte ich *šitim* als Lesung vorschlagen, vgl. den Zeichennamen von *šit* zählen: *šitimmu*, und Foertsch 66, rev. *igi-gar-ma* Zählung, worauf *šid-da* „er hat gezählt" folgt. F. H.].

Die archaische Ziffer „eins" ⊐ vor vollwertigen Sklaven, die monatlich 60 qa erhalten; ⋈ halbwertig, erhält 30 qa; ⊢, ⊤ steht vor jungen Sklaven, die entsprechend weniger erhalten (vgl. z. B. C. T. 1, 6f.).

a-ru-a = geschenkt, geweiht, d. h. ein Sklave (oder auch Schafe u. dgl.) dem Tempel geweiht. [Der gleiche Ausdruck auch in der bekannten Weihformel *a-mu-na-ru* die deshalb auch nicht *a-mu-na-šub* transkribiert werden darf; das Zeichen *ru*, *šub*, ursprünglich werfen, hat Nies im Am. Anthropologist, Vol. 16, 1914, p. 26–32, glücklich als Bild eines Bumerang oder Wurfholzes erklärt, zu welcher Deutung auf ganz anderem Wege und ohne noch von Nies Aufstellung, die damals bei uns noch gar nicht bekannt war, zu wissen, mein Schüler, Dr. Anton Schmalzl, unabhängig gelangt war. F. H.]

63, 19 *še-giš-è-a* = Ertrag der frischen (d. i. gewachsenen) Gerste (im Gegensatz zur alten (*še-sun*).

65, 21 *ǵar-gud* sicher Lohn für die *engar* (Zeichen *apin*) [vgl. Legrain 377].

67, 27: *sir-gan* ist ein Feld, welches sehr wenig oder gar kein Getreide hervorbringt, also Brachland oder dergl. [dagegen *sir* (oder besser *sud-*) *-gán* Magnesit (?)].

68, 53. 105. 113. 135: *še-bat* [syn. *bil-kú* bei Metallen, siehe Legrain, p. 84, Note 1] ist ein Abfall oder Verlust an Gewicht oder Volumen bei der Mehl- oder Bierbereitung; Z. 53 ist es $^1/_5$ (152 *qa*: $30^1/_3$ *qa* 4 *gìn* = 5) usw.

Zu 73 vgl. C. T. 7, 10; 9, 16, 1; STH. 2, 34, 4.

92, 8 *Ur-d. Gur* (nicht *-Zikum*); vorher sein Sohn *d. Dun-gi-ra.*

107, 8 (und S. 99) lies *d. Nin-é-gal* statt *d. Nin-lil-gal.* [Die bekannte Gemahlin des *d. Uraš*; vgl. auch M. D. O. G., Nr. 54 (Juni 1914) S. 16 altassyrisch (Zeit des Bur-Sin von Uri) *bit* (*ilat*) *Belit-é-kal-lim*].

115, rev. 1; 118, 5; 146, 2 überall dieselbe Gottheit, im P.-N. *Ur-d.* Nin-ISIN + LA. [Vgl. auch C. T. XXXII, 23 obv. 10 den gleichen P.-N. mit dem gleichen Titel *lul*, Deimel, Pantheon 2525; ferner Nippur 19767, Col. 3, 33 *é d. Nin-*x *ki-áb-nunme-du-ki tur d. En-zu-na-ge* und Th.-D., R. A. IX, 74 *d. Nin-x bugal ǵul-gál-ra* au roi qui frappe les méchants — also eine männliche Gottheit wie Nin-ib usw. F. H.]

170, 3 *na-aḫ-ba-tum* (nicht *na-ǵar*!) ein Behältnis aus Leder; vgl. H. W. B. 260 s. v. *naḫbû*, also semit. Lehnwort; ein Syn. ist *ut-tuk-kan-nu* Köcher, HWB. 157, aus *ug* Pfeil, türk. *oq*, und *tukkan* Lederbeutel, vgl. dazu Nies 176, 4 *du(g)-gán*[1]); ein anderes Syn. ist *kapturru* HWB. 348 Köcher = hebr. *kaphtor* Säulenknauf (da der Köcher mit dem halbkreisförmigen Deckel wie eine Säule mit ihrem Kopf oder Knauf aussieht),

[1]) Nicht *bir*, welches altbabyl. = Zeichen *ǵi* oder *du(g)* mit eingeschriebenem *še* ist, REC. 213/4 (auch REC. 214 ist demnach zu korrigieren, vgl. Legrain, pl. LI, Note 23 zu Gud. B. 6. 53 *esir gú-bir* eine Asphaltart, vgl. dazu *kupru* Erdpech) und sonst Niere (türk. *böbrák*) und zerreißen (türk. *pirtik* „in Stücken") bedeutet. Zu *du(g)-gan* = *tukkannu*, arab. *dukkân* vgl. auch Legrain 12, 9; 17, 7 und 383, 3 „sac de cuir" und das gleichbedeutende Wort *šà-gán* (vgl. *šamallû* Händler aus *šà-gán-lal* Sackträger, Beutelträger).

während das gewöhnliche Wort *išpatu* Köcher das Id. *su a-má-tu* (*tu* = REC. 220 *urú*, bzw. *gùr*, bei Gudea *é-mar-gúr*) HWB. S. 147 (und vgl. Th.-D., Königsinschr., S. 70, Note k) hat[1])]. — Soweit die mir gütigst zur Verfügung gestellten Bemerkungen Pater Deimels.

Nun noch zu den „Lists" p. 80ff. (vor allem der „List of words" p. 115ff.) eine Reihe von Verbesserungsvorschlägen und Nachträgen:

Bei den P.-N. hätten die sicher semitischen, phonetisch geschriebenen Namen als solche gekennzeichnet sein sollen, z. B. *A-bí-a-bi-il* (= *Abî-Japi'*, westsemitisch?), *Ab-di-ṭâbu*, *A-ḫu-ni* (*iš* in 99, 3 ist Titel, nach TSA 6, 3 *saǵar-ra-ni* besser *saǵar* zu lesen, = *kizû* Legrain p. 147), *Ú-da-mi-ša(r)-ra-am*, d. i. er läßt ihn beim König schwören, für *utammi*[2]) usw. usw. *A-ka-qa* ist wohl *A-dug-gà* zu umschreiben[3]). Sind *A-ri-gìn-a-ri* und *A-ri-gìn-ǵu-ub-bi* (p. 81) etwa Mitanni-namen (und ist *gìn* ein Fehler des Schreibers für *ib*, also etwa *Arib-ari*, *Arib-ǵubbi*)? Vgl. dazu meine Notiz in OLZ. 16 (1913), Sp. 304 bis 306 nebst dem Nachtrag Sp. 376f. (*Ki-rí-bu-ul-me* von Simuru, *Sapalulme* von Ḫattin und Subbiluliuma, der Hethiterkönig, an welch alle der Name des Patesi von Adab, *Ḫa-ba-lul-é* Nies 94, 1 merkwürdig anklingt). S. 83, Z. 2 lies besser *Igi-an-na-ge-zu* (so auch Legrain). S. 83 *Ur-d.-Èn* (*èn* = *šiptu*) statt *Ur-d.-Adad-ilu*, vgl. C. T. 24, 27, 7. Zu S. 83, Note 10: das Zeichen *lál* Honig besteht aus *ta* und eingeschriebenem *dug* „süß" (nicht *num* Biene, was übrigens *num tál* heißt, = Honigfliege). S. 85 lies wohl *Ur-ba-gá* (*gá* in *ba-gá* aus *sa* und *gar* zusammengesetzt) statt *Ur-ba-bi*. S. 88 lies *Bí-bí-a*. S. 90 lies *Ilu-ra-bí* statt *Dingir-ra-ne*; *Dul-ku-lù* und *Dul-ma-nu* wohl beide = *Dul-ma-nu* (beachte dann im ersten Fall das Id. für Mensch = *nu*); *Dun-gi-ḫa-zi-iz* (semitisch) statt *Dun-gi-ḫa-zi-giš*; lies ferner *d. Dun-gi-pa-lì-il* (vgl. *palil*, nach Poebel auch *pašiš*, Id. sonst *igi-du*). S. 91 *Lù-dingir-a-ni* = *Amel-ili-šu*; Spalte 2 fehlt *Lù-erīm-ki* Nies 20, 6 (siehe S. 123), wozu zu notieren, daß REC. 359 mit *-ki* wohl das bekannte *uru-ki* Hauptstadt ist, daß aber, besonders im Gottesnamen *Lugal-x-ki*, eine bestimmte frühhistorische Stadt gemeint sein wird, die nach R. T. C. 59, 3, 5 auf *-ba* endete, also vielleicht Adab, während die Lesung *erim* nur dem Zeichen *uru* Stadt mit eingeschriebenem *gar*, s. oben S. 205, zugehört. Statt *Lugal-saǵan* S. 92 ist *Lugal-ǵi-nun* zu lesen (vgl. zu *ǵi-nun* Zyl. A, 18, 21 u. ö., eine Art Butter). S. 94 lies *Ṣilli(-lì)* mein Schutz statt *Mi-ni*; *Mu-ri-na-ba-ag* ist kein P.-N., sondern der Name eines Nannar-tempels (Grundr. S. 383); *Na-ab-la-num* (nicht *-lúm*, anderwärts *-nu-um* geschrieben); S. 95 *Na-na* und *Na-na-a* (sprich *Nanai*) sind Hypocoristica eines mit *an-na* zusammengesetzten Namens (vgl. meine Ausführung in der Sachau-Festschrift S. 18, Anm. 1); S. 96 gehört d. *Nu-ni-ib* (lies d. *Nu-ni-tum* d. i. Anunit) zu den Götternamen; zu *Nu-úr-ì-lì* vgl. auch den gleichlautenden Beinamen des Marduk von Eridu „Licht Gottes" C. T. 29, 45, 26 (vgl. dazu im Qoran *nûr Allah* = Jesus und im N. T. Jesus das Licht der Welt, der göttl. λόγος von Gen. 1, 1f.) und des Gottes *Lugal* (vgl. dazu C. T. 6, 36a = Bu. 91, 5, 9, 704, Z. 1/2 *é d. Lugal* und d. *Šu-ul-la-at*, seiner göttl. Gemahlin, von *Nu-*

[1]) Da *a-má-gùr* und *mar-gùr* sonst Sturmflut, Wirbelwind, Zyklon (*abûbu*) heißt (und ebenso *a-ma-ru* schon bei Gudea) z. B. auch der Schlacht, so liegt offenbar eine Übertragung auf den Pfeilregen vor, also *é-mar-gùr* eigentlich Haus des Sturmwindes, dann übertragen Haus der Pfeile = Köcher; *a-má*, bzw. *a-ma*, entspricht, wie es scheint, hierin dem Ausdruck *mar*. Ein Bild des ass. Köchers mit Deckel findet sich in G. Rawlinsons Five great Monarchies, 4 ed. (1879), I, p. 453; so sah wohl auch der Teraphim 1. Sam. 19 aus (eine köcherähnliche Puppe), weshalb er auch als Köcher die Lospfeile (Ezech. 21, 26) enthalten konnte.

[2]) Es darf also bei zusammenhängender Transkription, hier und in ähnlichen Fällen, nicht mit Nies *Udamišaraam* umschrieben werden, sondern *Udami-šar(r)am*.

[3]) Es gab auch einen Ort *A-dug-qa-ki* (geschr. *A-ka-qa-ki*), worin (nach Pater Deimel) der Gott *Agarra* (bzw. *Šarra*, *Šara*) verehrt wurde (Stawarcegk, ed. Deimel, 9, 4), also wohl ein Beiname von Umma-ki.

úr-í-li-šu erbaut); bei *Šeš-kal-la* fehlt das Zitat 66, 2. S. 97 steht an der betr. Stelle (91, 88) *An-at-ra-at* (nicht *Pi-at-ra-at*); wie ist dieser P. N. zu analysieren?

Zu den Götternamen, p. 97—100: *Ama-mu* ist 58, 111 eng mit *Nin-giš-zi-da* verknüpft, also wohl seine Mutter *Nin-sun* oder *Siris*; vgl. dazu Gud. Cyl. B, 23, 18f. Statt *Dar-an-na* S. 98 ist *Gún-an-na* oder *Sí-an-na* zu lesen (REC. 48, nicht 34); dagegen 51, 6 usw. richtig *Nin-dar-a* (tilge: or *Nin-sí-a*). p. 99 *Nin-da* mit dem Beisatz *iš-túg-dim* dem Namen eines ihm geweihten heiligen Hügels[1]). *Nin-mar-ki-ka* ist ein P.-N. (die Göttin heißt nur *Nin-mar-ki*).

Zu den Tempelnamen und Namen von Baulichkeiten, p. 100f.: In *É-a d. Nin-mar-ki* und ähnlichen mit *é-a* beginnenden O.-N. bedeutet *é-a* Haus des Kanals von . . ., also wohl eine Art Schleuse oder Hafen. Zu dem p. 100 fehlenden *é-ba-an* 1, 41 (*giš da-ag-si é-ba-an*, S. 37 mit ladders übersetzt) vgl. Legrain 292, 2f. „trésor(?)" und zu *ba-an* Clay's Yale-syllabary 274—280 *ba-an* = *sa-a-at*, ein Maß, also = סְאָה. Zu *é-d. Eš̌ganna-šeš-e-gar-ra* p. 101 und (Nachtrag zu p. 160) p. 193 vgl. (als Bestätigung von Foertschs Erklärung) die beiden korrespondierenden Götternamen *Ul-li-gar-ra* und *Ni-gar-ra* KTARI No. 4, rev. 11[2]), worin *ul-li* dem Ausdruck *urin* (= *šeš* Bruder, nicht „mourner" Nies, p. 193, was anders geschrieben wird) und *ni* dem Ausdruck *nin* Schwester entspricht. Zu *Di-qa-la* p. 100 und 103 siehe schon Landsberger (in alten Texten deutlich *Ki-qa-la*, also *Ki-sìl-la* zu lesen); 58, 187 ist natürlich *é-ki-sìl-la-me* (Leute von . . .) zu korrigieren (statt *-lal*, welche Lesung Nies p. 52 als richtig ansah). Zu *Šu-ga-lam-ma* siehe meine Ausführung bei Mercer, The Oath, p. 98 und 100. Zu *rim* in *é-rim-gub-ba* dachte ich seinerzeit (1910) bei „lambs" an 2. R. 27, 17 *rim* mit Glosse *im* = *ša-nu-ú* (arab. *ṯanij*, ثَنِيّ, was allerdings meist Füllen von Pferd und Kamel, aber doch gelegentlich auch zweijähriges Lamm bedeutet), es könnte aber auch ein Ausdruck wie Läufer-station vorliegen[3]).

Von den Ortsnamen (siehe die Liste Nies p. 102f.) wurden die wichtigsten schon oben S. 203f. behandelt. *Ši-ma-nu-um-ki* 92, 18 ist der aus dem Datum des dritten Jahres des Gimil-Sin bekannte Ort Legr. 18, 7 *Ši-ma-nu-um-ki*, für welchen Nies 166, 11 *Si-ma-nùm ki* steht; dadurch ist die Möglichkeit der Lesung *Ù-nu-um-ki* (Nies p. 102) ausgeschaltet. Was Uri anlangt, so schließt die Verlängerung auf *-ma* die Transkription *Urù-unu(g)-ki* aus (es ist wohl *Urim-ma* gesprochen worden, mit Übergehung des Elements *unu*, wohingegen *Unu-ki-ga* = Uruk, Erech, als *Unug-ga* anzusetzen ist); *urim-ma* wahrscheinlich jüngere Aussprache des ersten Elements *sis* = *urin*. S. 102, Note 20 ist das Zitat Br. 8163 zu streichen, da dort nicht *ṣab* = *erim*, sondern, wie die Verlängerung zeigt, *laǵ* (vgl. dazu meine Aufs. u. Abh. S. 327 und Anm. 1) vorliegt; deshalb ist auch S. 103 bei den Kanalnamen nicht *Erim-ga*, sondern *Laǵ-ga* (*laǵ* wird ja auch in den Beschwörungsformeln stets durch *ga* verlängert) d. i. der helle, glänzende, zu transkribieren. Zu *Ḫu-ne-ru-ki* (= *Ḫu-aibu*, opp. *Ḫu-da-du*) vgl. meinen Grundriß, S. 252.

Zu den Monatsnamen S. 104 ist *bil-lal-a* zu streichen; es bedeutet (siehe Landsberger, Kult. Kal. S. 63, Anm. 3) einfach „im neuen Monat", *bil-lá-a* (*a* Postp., = in).

---

[1]) Vgl. zum Gott *Nin-da* Deimel, Pantheon, No. 2483. *Dim* (*din* p. 99 ist Druckfehler) = *tarkullu* Schiftspfahl, aber nach Jensen auch Pfahl des Kleiderwäschers, vgl. oben *túg* Kleid (nicht *zíd*!). Bei Contenau, No. 86, Siegel, hat *Nin da* den Zusatz *Sir-bur-la*, also ein speziell in Lagaš verehrter Gott.

[2]) Vgl. noch *ilu Bara-ul-li-gar-ra* C. T. 24, 26, 104 (es folgt *ilu Pap nigin gar-ra*) und RA. XI, 91, No. 5 (neues Datum des Rim-Sin) *ilu Bara-ul-e-gar-ra*, und zu Ningirsu--*nin-ni-gar-ra* noch *d. Ni-ga-ra* (nach Istar) 2. R. 60, 4, 12. Zu *-gar-ra* gehörig zu etwas s. Landsberger, Kult. Kal. S. 51 oben; 59, Anm. 5.

[3]) So Nies p. 122 im Index und oben S. 207 Pater Deimel. Vgl. übrigens auch meinen Grundr. S. 252, Anm. 4 (*é-rim* in *Ḫu-aibu*) und Reisner, Tempelurk. S. 4.

Den 2. Jokha-Monat *zíg-giš-ù-šub-ba* (Nies 180, 6) hat schon Nies selbst (im Index, p. 162) nachzutragen geheißen; die Lesung des Ideogramms für Backstein ist besser *zig* als *síg* (daraus neusum. *še-ib*, vgl. *zikkurrat* Backsteinbau aus *zíg-úr*, wie andrerseits *agurru* Backstein aus *al-úr*, urspr. *al-ġur* entstanden sein wird, und vgl. als Bestätigung *i-zi* = *igâru* und *é-zíg* = *igâru*) anzusetzen.

Im Arithmetical Index p. 107—114 ist auf p. 114 statt Zahl-*dŭ-uš* vielmehr Zahl-*kam-uš* (soundso vielster Rang) zu umschreiben; wenn p. 135 dafür die Lesung *gan* statt *kam* (urspr. wohl *ġam*) vorgeschlagen wird, so beruht das auf Verkennung der neuassyrischen Variante, des schief gestellten Zeichen *gán*, denn letzteres ist einfach eine unbeholfene Wiedergabe der babylonischen Kursivform von *kam* und hat mit *gán* = *ġe* nichts zu tun. Zu *ba-ni* S. 114 (an sechs Stellen) vgl. auch p. 130, und lies *ba-zal* (siehe 31, 6: *ud* 30 *ba-zal-la*), also auf p. 145 bei *zal* nachzutragen. Vgl. Legrain, p. 16 und Anm. 1. Daß bei den p. 107—113 öfter begegnenden Ideogrammen für $^1/_3$ (*šušana*), $^2/_3$ (*šanabi*) und $^5/_6$ (*kingusili*) nicht hier und da die phonetische Ergänzung *šá*, die in den Wirtschaftstexten der älteren Zeit bei $^1/_3$ und $^2/_3$ fast nie fehlt, anzutreffen ist, ist angesichts des Vorkommens dieses *-šá* in Reisners Tempelurkunden (vgl. dort S. 32: *ša* bezeichnet die Bruchteile der Mine) wohl nur Zufall. Der Bruch $^5/_6$ kommt auch schon in der Agade-epoche vor, vgl. Inv. II, 4355, und auch hier mit darauffolgendem *šá*. Daß nach $^2/_3$ *-šá* eine Abkürzung für volleres *šanabi* ist, lehrt Bartons Sum. Doc. No. 80, obv. 1 $^2/_3$ *azag-šá-na-pi-ta*. Ursprünglich aber ist *-ša* eine Verlängerung von *šuš* „Bruch" (in $^1/_3$ stets mitgesprochen, vgl. späteres *šušana*, wohl aus *šuš-ša a-an*, in $^2/_3$. *šanabi*, wohl dazu zu ergänzen, also auch hier *šuššanabi* urspr.), wie ja der erste Bestandteil der Ideogramme dieser Bruchzahlen das Zeichen *u* = *šu*, alt *šu(š)* vorstellt[1]). Wenn *šušša(n)* = $^1/_3$ und im Unterschied dazu (*šuš*)*šanabi* $^2/_3$ bedeutet, so verhält sich das genau wie bei den Daten *uš-sa* (das folgende Jahr) zu *uš-sa-bi* (das nächstfolgende Jahr), wobei *-bi* das bekannte Copulativ „und noch" (abgekürzt aus *-bi-da* „mit seinem . . ") ist[2]).

Nun in aller Kürze noch eine Reihe von Randglossen zum „Index of Words" p. 115—172, die ich des Raums und der Zeit halber nur halb so ausführlich geben kann, als ich ursprünglich vorhatte. Uberdies ist ja manches schon in den Seiten 200ff. von mir vorweggenommen.

S. 115 P.-N. *A-ba-an-da-di* = *mannu išánan* oder *imáḫar* „wer rivalisiert mit . . .?" Der Tempelturm von Agade, den Nies p. 98, Anm. 18 und p. 155 vergleicht (p. 80, note 2 ist ein Druckfehler, da p. 80 bei *A-ba-an-da-di* sich keine Anmerkung findet), hieß *é-an-da-di-a*, siehe Grundr. S. 234 und 409. Streiche den Absatz *a-bí* or *a-izi* „Hitze", da der P.-N. *A-bí-zi-im-ti* (vgl. auch Legrain 126, 9 und 315, 4) wohl sicher semitisch zu fassen ist, vgl. *Dun-gi-zi-im-ti*, *Li-bur-zi-im-ti*, *Li-bur-be-lí* bei Legrain, und siehe *Ranke*, Personal Names, p. 252, alte Orthographie für *simti*, vgl. *Ai-zi-ma-at ma-tim*, Ai ist Schmuck des Landes, womit wohl *zimu* Erscheinung, Aussehen im P.-N. *Bêl-zi-mu-um* Legrain 29, 9 verwandt ist.

[1]) Zeichen für $^1/_3$ = *šu(š)* und Ziffer 1; Zeichen für $^2/_3$ = *šu(š)* und Ziffer 2, also beidemal „Drittel" zu ergänzen; Zeichen für $^5/_6$ aber = *šu(š)* und Ziffer 5, also hier „Sechstel" zu ergänzen. Man beachte für 5 die Schreibung $1 + 2^2$, d. i. $1 + 4$ (auf dem gleichen Prinzip beruht die bekannte Schreibung $3^2 = 9$). Die alten Ägypter schreiben für $^2/_3$ das Zeichen für Mund mit zwei daruntergesetzten senkrechten Strichen, was also bei ihnen an die Stelle des altbabyl. Zeichens *šu(š)* „Bruch" getreten ist; vgl. *Kurt Sethes* lehrreiches Buch „Von Zahlen und Zahlworten bei den alten Ägyptern" Straßb. 1916 (VIII. 147 S. in Großoktav) S. 85ff. und schon S. 82. — Neben *šuš* Bruch gab es auch *šeš*, so in *šeš-lam* $^4/_4$ (vgl. äg. ⨯ Sethe, S. 75, = $^1/_4$), geschrieben ⨯ 4 (= *kibrâtu*, urspr. also *šeš* = $^1/_4$, da *lam* vier bedeutet); vgl. auch in Clay's Yale Syllabary 308 *šizû* Syn. von *šuššan* $^1/_3$ und Z. 312 *šin šizî* Syn. von *šinibu* (der Semitisierung von *šanabi*), was also *šiz* neben *šuš* voraussetzt.

[2]) Das äg. Syn. *šiwj* (nach äg. Volksetym. „zwei Teile") für $^2/_3$ ist gewiß urspr. mit *šanabi* identisch.

S. 116 *áb bar-éš* lies *áb maš-tab-ba* (Zwillingskuh, d. i. die zwei Kälber warf, oder die eine von zwei Kuhzwillingen, also wie unser Zwillingschwester)? — *Ab-ba-uru* heißt Alter (Scheich) der Stadt, so auch R. T. C. 431 (Siegel); auf einer Tafel der Sammlung Reimers in Hamburg, *ab-ba-ra-ka*, also wohl *abarakku* eine Ableitung von *ab-ba-uru*. — Statt *ad-é* ist *ad-kid* Schiffsbauer (vgl. die Handwerkerlisten R. T. C. 93, rev. und 54, col. 6, ferner Inv. I 1363, 5 und öfter, semit. *addubu* Meißner, Ass. Stud. S. 17—20 (vgl. *ad* bei Gudea, Statue B, 5, 58 Balken oder Schiffholz, Brett). — S. 117 *a-lal*, vgl. meine Note zu *lal* ursprünglich gebogene Drainierungsröhre O. L. Z., 10 (1907), Sp. 483, Nr. 10 *lal* Kniestück der Kanalröhre. Zu *alal* Röhre (*elallu* HWB. 73) vielleicht auch Flöte, *αὐλός*, vgl. *elêlu* auf der Flöte spielen, *malilu* Flöte und *melultu* Musik und wohl auch *lul* Musik (der Wert *nar* vielleicht erst semitischen Ursprungs, vgl. auch C. T. 24, 17, 50 *d. Lul-a-ge*, Glosse *ilu ša na-a-ri* Gott der Musiker.

S. 118 *é-an* (oder *dingir*) *-dúl* (oder *-pú*), vgl. den Kultort *giš-pú* bei Lugalanda; falls mit Nies *andullu* Schutz, Schirm zu vergleichen gewesen wäre, so läge Ideogrammverwechslung vor. *Anšu-ú-gu-de-a* heißt „flüchtige" Esel und hat nichts mit *gú-de* schreien zu tun. — Zu *má-a-si-ga* Frachtschiff p. 119 vgl. Legrain 13, 25 *má-dirig-ga* barque en supplément(?); arabisch *wasaqa* anhäufen (und auch ein Schiff beladen) müßte, wenn es hergehört, babylonisches Lehnwort sein.

S. 120 *aš* bzw. *ziz* ist sicher nicht Hanf, sondern Emmer (vgl. auch türk. *aš* Nahrung, Speise), so wenig wie *a-ter* Reis, der erst im vierten Jahrhundert vor Christi Geburt von Persien her (vgl. Imm. Loew, Aram. Pflanzennamen, S. 358 *ὄρυζα*, aram. *arôzā*, arab. *ruzz*, aus eranisch *brîzi*, skt. *vrîhi*) nach Westen und zwar sogar bis nach Elam und Babylonien (s. Strabo und Diodor), kam; die Pflanze *arûšu*, syn. *atirti eqli* und *sum ǵab* wird eher eine Zwiebelart sein[1]). Bei *á* fehlt ein Hinweis auf *á-daǵ-ǵa* 61, 15 (dort als Unterschrift mit größeren Zeichen, also vielleicht „Duplikat", vgl. *gab-ri* = *gabrû*, *gabarû* und *gab* = *daǵ*). Zu *á-gi(g)-ba-a* au terme de la nuit (?) und *á-ud-te-na* au déclin du jour (?) d. h. wenn der Tag kühl (*te-na*) wird, vgl. Legrain, p. 42 f.; auf keinen Fall kann die Nies p. 69 gegebene Übersetzung richtig sein, wie schon die Gegensätze von *gi(g)* Nacht und *ud* Tag beweisen (Legrain stellte mit Recht auch noch *á-gú-zi-ga* dazu, von dem wir glücklicherweise sicher wissen, daß es Morgenfrühe bedeutet).

S. 121 ist *é-ne* (beachte *é*, nicht *e*) in *uš bar-é-ne* sicher nicht Pluralendung, sondern es ist *uš-bar é-bil* zu lesen. — S. 122 fehlt bei *e* 168, 11 *mu . . . e-da* (vgl. sonst *mu . . . šù?*). — S. 123 *erim* „soldier", ursprünglich *erin*, vgl. 36, 3 *á erin-na*; so auch auf p. 120 bei *á* (statt *erim-na*) zu korrigieren. *Ud* und *erim* sind zuweilen verwechselt, so sicher in *ša(g)-erim* 100, 23, was vielmehr *ša(g)-tam* (= *šatammu*) zu transkribieren ist. — S. 124 ist *ri(g) ib-ku* statt *ri-tùm-ma* zu lesen; vgl. bei Legrain 342, 4 in derselben Redensart *ri(g) ba-ab-kú* (also hier *kú* für *ku* „einsetzen", wozu man Foertsch, O. L. Z. 18, 1915, Sp. 39 bis 41 *kú* = bringen, liefern vergleiche). — Das Zeichen IGI + ŠÙ (nicht IGI + KU) in *x-a-an* ist ein anderes Zeichen als *Ù* „und", nämlich *labar* „alt" (vgl. z. B. Inv. II, 1, Nr. 695, rev. 4/5, dort dem Wort *gibil* „neu" entgegengesetzt); vgl. auch Amherst 38, 1, 10. 24 u. ö., etwa mit „alter Bestand" (Pinches p. 69 being of the earlier number) zu übersetzen (das Zeichen ist eigentlich *igi-šù* = *ana pâni*, vgl. *pânu* auch „Vorzeit",

[1]) Reisner, Tempelurkunden, S. 1 gibt zu A-TER den semit. Pflanzennamen *atirtu* ohne Belegstelle (also wohl nur eine Kombinierung von ihm wegen des Gleichklangs, die ja an und für sich richtig sein könnte). Sonst vergleiche für *a-tir* die Übersetzung *šasqû* SAI 8921 und dazu 11445 (Zusatz zu C. T. 12, 28, rev. 26 = 5. R. 22, 24), sum. Aussprache *e-eš-a* und die ergänzende, von Zimmern beigebrachte Stelle aus K. 263 *a-tir* = *sasqû* (sic) = *mun-di* (vgl. *zíd mun du* D. P. 47 u. ö., eine Art Mehl) *aš-a-an* (also eine Emmer-art!), wozu vielleicht aram. und neuhebr. *sasgōnā* „rotfarben" zu stellen ist.

urspr. Gesicht, Front). — S. 125 *im-e-kid-a* wohl eher Ton-abkneifer = Maurer, da es bei Reisner mit *ad-kid* (*ad-ge*) Schiffbauer zusammen vorkommt.

S. 126 *ir* als Titel, Verwechslung mit dem Zeichen *aškapu* Schuster? — *ù-šub-ba* Ziegelform, verbessert auf p. 162b. — S. 127b lies überall *udu-nita* statt *udu-uš*. — S. 128 *uz* sicher „Gans".

S. 129 *arad-zu* auf Siegelzylinder ist (semitisch) „his servant", siehe meinen Nachweis in Krauß, Götternamen, S. 15 Anm. 3. — Bei *uru* fehlt der Hinweis auf den O.-N. 81, 10 *Ú*-URU + A-*a-ki*.

S. 131 ist *ud-ud* nicht *babbar* (das wäre *ud* allein), sondern *par-par* oder *lar* (vgl. Larak) zu umschreiben. Es fehlt zwischen *bád* und *bal* der Hinweis auf *baǵ* als (vermeintlicher) Lesung von *igi* p. 153a. — *bal* 127, 8; 68, 163 Regierungszeit, Amtszeit. — *banšur*, das Ideogramm ist zusammengesetzt aus REC. 386 (*gál*, urspr. wohl Wohnsitz, vgl. das ähnliche Zeichen für *uru* Stadt, dann vielleicht auch Tisch) und *urud*; RTC. 32 und 33 *banšur-ra* (altes Lehnwort aus arabisch *fâṭûr*, schon minäisch *pâṭûr*, siehe meine Aufs. u. Abh., S. 33). — *bar-gál* heißt nach Pater Deimel „ungeschoren" (opp. *úr-ra* geschoren).

S. 132 fehlt der Hinweis auf *bir* = *du(g)-gán* p. 143 (wo allerdings *bir* nur eine dem neuassyrischen entnommene falsche Transkription ist). — *šu-bu* besser *šu-gid* (s. auch p. 169); Legrain: prélevement, saisie. — S. 133 lies *á-šù-mal* (statt *á-túg-gà*), bzw. *á-dúr-mal* (s. oben S. 200, Anm. 1), und lies *mal-e* „ich" (vgl. *-mu* mein) statt *gá-e*; *mal* hatte schon in alter Zeit den Wert *mal* neben *gàl*, *gá*. — Zu *gab* = *dŭ* (94 L. E.) verglich Thureau-Dangin wohl mit Recht *piḫû ša elippi* = *gab* C. T. XII, 11, rev. 1, 6 (nach Delitzsch „das Schiff steuern", hier wohl „vom Stapel lassen", eigentl. lösen). *Sil dŭ* 172, 1 nach Pater Deimel besser „entwöhntes (eigentl. von der Mutter abgelöstes) Lamm". Statt *gab a* lies stets *dŭ-a*.

S. 134. Bei *gál* fehlt Hinweis auf *bar-gál* ungeschoren (s. oben). *Gàl*, *galu* (lies *gullu*, s. oben S. 203) Mensch: lies *gàl nin-dingir* (Gottesschwester, vgl. den entsprechenden altäg. Titel) statt *g. nin-ilu*. Statt *gàl gú-bil-sag* (59, 54) gibt Nies hier die Umschreibung *tib-bí-sag*, p. 140 aber *gun-ne-sag*; *gú-bil* = *kuppû* (aus *gú-bí*) Steinbutt spricht gegen beides, falls nicht *ne-sag* (Var. *ni-sag*) „Opfer" in dem Ausdruck steckt, dann etwa Aufseher (*gú*) über die Opfer (vgl. auch den P. N. *Ne-sag* der alten Epoche).

S. 135. Hierher gehört *gala* (= *uš-ku*). *Gan* = *kam* (nach Zahlen) ist zu streichen (s. schon oben). *Dam-qar* heißt nicht Kaufmann (arab. *tâgir* von *agru* Lohn weitergebildet), sondern Sachwalter, „homme d'affaires" Inv. II, 1, 832 u. ö. (der mit dem Absiegeln betraut ist?, vgl. alttürk. *tamǵa* Siegel, Dekret). — S. 136 *sìg gi* heißt nach Pater Deimel „nicht entfettete Wolle". Zu *gid* gehört *šu-gid*, s. schon oben (Nies transkribiert *šu-bu*). Mit *gín-uš* ist *mir-uš* = *ukuš* gemeint (*mir* ist neuass. ein *gunû* von *ṭu*, *gín*; das alte *mir* sieht anders aus).

S. 137 *giš-gibil-ga* mit dem (männl.) Holz Feuer machend (reibend), daher dann übertragen „Vater", weshalb auch der Monat *bil-bil-gar* den semit. Namen *Abu* „Vater" bekam. Am Schluß der zweiten Kolumne sind die ganz verschieden geschriebenen Ausdrücke *giš-ku* Waffe und *giš-túg* Ohr nicht klar auseinander gehalten. S. 138 fehlt (bei *giš*) *giš-mar* Wagen, siehe S. 136 und bei den Ortsnamen (91, 337). *Gu-la* „groß" ist nur eine jüngere Aussprache von *gal*. *Gú* Talent gehört auf S. 138 statt zu *gun* S. 139 (vgl. schon oben das von Pater Deimel zu *gú-na* Bemerkte). S. 139 *mu-gub* (Legrain: *mu-túm*) eingebrachtes, doch vergleiche die Verlängerung mit *-ra* in *ša(g) mu-x-ra-ta* (auch bei Legrain belegt, siehe dort p. 141), also vielleicht *ša(g) mu-ara-ta* gemeint;

oder vgl. Rm. 2, 588, 36 (Meißner, Suppl. pl. 25) *du* = *gir* = *šanû* (es folgt *gir* = *rim* = *šanû*, vgl. oben *im* = *šanû* S. 210? — dann hier *mu-gir-ra-ta* (*gir* aus *gin*?).

S. 140: Zu *na-mi-gur-ri* vgl. auch sonst in Briefen, z. B. Gen. Trouv. 66, 5 und 89, 6; Gen. Tabl. Dreh. 5610, 6 (hier *nam-mi-gur-ri*!); Gen. Trouv. p. 20 „sans réponse(?)". — Der Ausdruck *má a si-ga* (Lastschiff) *sìg* (Wolle) *-ka-rí* 25, 2 stellt wohl die phonetisch-semitische Schreibung von *sig* GÛR = *ka-ri-e* (HWB. 353) „Wolle (in) Tonnen" vor. — *gud túg* (Kleid) *kin* (oder *gúr*) vielleicht Ochsen für Kleidertransport (von *kin* Sendung); „a hired ox" ist durch das Zeichen (es müßte dann *šù*, *zíd* geschr. sein) ausgeschlossen. — *Mu-ukuš-e-da*, *mu- . . . e-da* gleich sonstigem *mu- . . . šû* „für" (*aššum* aus *ana šum*)? Vgl. auch das bei Verben beliebte *-e-da* (eine Art Gerundium). — Bei *da* fehlt Hinweis auf das Gerät *giš-da-ag-si* 1, 41, was an die *dak-kas-si*-Steine Sen. 3, 35 (vgl. als Analogie *ušû* sowohl Stein als Holz?) erinnert und auch an die nach dem *rabbû*-Gewicht gewogenen *tak-ka-su-u* in Peisers Verträgen 70, 1 u. ö. — S. 141 *gà-gà-dam*, *gí gí-dam*, *su-su-dam* sind Reflexivformen (*-dam* hier aus *-da a-an*), vgl. meine Sum. Lesest. S. 103 und vgl. noch Inv. I, 1337 *taǵ-ǵi-dam* il sera ajouté (sur les listes). Zu 31, 7 *tukundi bi* (*šú-ning tùl-la-bi* seine Hand-satzung = gesetzt daß) *nu-dib ib-tab-bí* vgl. Legrain 370, 1 *ning-erim nu-dib* (bêtes) mauvaises non acceptées (und ähnl. Stellen in Reisners Tempelurk.). Lies *kú-dim* (vgl. *kudimmu*) statt *azag gim*; lies ferner *dìm* (statt *din*) in *iši tug-dìm* (p. 126 richtiger *zíd-dìm*), s. oben S. 210, Anm. 1. — S. 142. Siehe zu *du-gab* „dispensateur des biens" (Nies *rá-gab*, welche Lesung auf der Voraussetzung beruht, daß dieser Titel von sem. *rakâbu* kommt) die ausführliche Note Legrain, p. 77, Anm. 2. In den S. 142 unten angeführten Beispielen (*hun-za*, *tug*, *aš-gar*) steht das nachgesetzte *du* vielleicht einfach für *gubba* „present". — *Dul-ma-nu* ist P.-N., entweder semitisch, dann jedoch eher *-nu-um* zu erwarten, oder es ist *ma-nu(n)* im Namen der Göttin *Ma-nu(n)-gal* zu vergleichen[1]). — S. 143 lies *á-šù-mal* statt *á-túg-gà*; auch Del., Sum. Gl. 124 liest falsch *ku-gà* (statt *šù-gà* oder *šù-mal*, falls nicht *dùr-mal*, vgl. *ur-dùr-ra* Haushund, zu transkribieren). *Dubbin* ohne Zitat; kommt es überhaupt in Nies' Texten vor? Und wenn nicht, warum führt es dann Nies im Index auf? — *Dug* Topf, wohl besser *lud*, vgl. Sargon, Prisma B, Z. 33 semit. *luṭ-ṭi* Vasen und 81—4—28 (Pinches, J. R. A. S. 1905, p. 830) obv. 45 *duk-duk* mit der Aussprache *lu-ud* = *lu-uṭ-ṭu* (vorher mit Aussprache *lu-um* = *lu-um-mu*, Z. 44); allerdings auch *du-ug* = *karpatu*, Del., Sum. Gl. S. 148. Ich zöge schon deshalb die Transkription *lud* als bequemer vor, weil es so viel andere Wörter *dug* (Zeichen *ǵi*, Zeichen *ka*) im Sumerischen gibt. S. 144 *Tur* (*dumu*)*-nita* 1, 2 wohl einfach Sohn (und nicht wie sonst = *ibil* Erbsohn), weil es hier dem Wort *dumu-sal* Tochter 1, 4 entgegengesetzt ist, es müßte denn *dumu-sal* auch hier Erbtochter bedeuten; vgl. die Folge 1, 1—4 *kal* Sklave, *dumu-nita* Sohn, *gìn* Sklavin, *dumu sal* Tochter. — *Banda* (geschr. *tur da*) halte ich für eine Nasalierung aus *bad* (vgl. auch *nu-tur* bzw. *nu-banda* = *labuttû*); also kann *dumu-ni-me* „seine Kinder" nicht *ban-ni-me* gelesen werden, wie Barton vorschlug. — Was die Zeichen *dun* und *šaǵ* (letzteres Wort bedeutet Schwein) anlangt, so halte ich es für unmöglich, daß sie ursprünglich einen Wasser-büffel (dieses Tier kam erst in nachchristl. Zeit von Arachosien nach Westasien (s. meine Säugetiernamen, S. 229) oder gar ein Zebu vorstellten; beide Zeichen, REC. 250 und 18, scheinen das Zeichen *nir* (zwei Bäume, vgl *nun* das Bild eines Baumes, so deutlich in den ältesten Inschriften) und ein schräg gestelltes (also darüber gehängtes) Zeichen *ma* zu enthalten, also wohl ein zusammengesetztes Bild (bei *šaǵ* noch das Zeichen für eins über dem ganzen). Vielleicht Bild eines Webstuhls, da *dun* bzw. *sud* (vgl. *sur* spinnen) auch weben

[1]) Beachte *Dul-ma-nu* 67, 15 = *Dul ma-nú* (Zeichen *amêlu*) 57, 4 (Nies, p. 144, Z. 6 irrig *Dul-ku-lù*).

(Th.-D., RA. XI, p. 83 und 86) hieß, wozu auch *ma* Gewand (2. R. 47, 35e e *an-ma* = *nalbaš šamê*, als P.-N. auch RTC. 53, 3, 2, vgl. den Himmelsmantel in der Mythologie) gut passen würde. Interessant ist *Ninni-za-an-ka* S. 144b unten, vgl. anderwärts die Varianten *Ninni-za* und *Za-Ninna* (und *Za-suǵ-unu-ki*, Var. *Za-Ninni-unu-ki* Grundr. S. 391 f., wo bereits *za* als Edelstein erklärt ist, vgl. Nies *za-an* jewel of heaven [= Venusstern]).

S. 145 fehlt bei *zi* der Hinweis auf *anšu-nita zi-lum* 69, 9 (vgl. jedoch p. 146 unter *zi-zi*). — d. *Dumu-zi* (-*da* HWB. 323) heißt nicht „son of life", sondern *mâru kênu* „Urenkel" (vgl. die Göttergenealogie Anu, En-lil, En-ki und Marduk = Tammuz), vgl. Tigl. 7, 49 *aplu kênu* Urenkel und *peš-tur-zi* = *lib-lib-bu* Ururenkel (vgl. Tigl. 7, 55 *lib-lib-bi* = Ururenkel). — Der Hinweis auf *kîmu* „agreed" H. W. B. 334 für *zid-da* Mehl ist irrig, da, wie längst erkannt, auch hier das Wort *qêmu* Mehl vorliegt.

S. 146 steht Br. 10626, bzw. 5. R. 21, 21 *ku-še-ir* = *ku-še-ru*, also fällt der Vergleich mit *sa*. Zu *zi-zi* vgl. auch Huss. II, 121, 1/2 und Reisn. Tello 121, 5, 1 und 121, 11, 21 *zi-zi-ne-a-lum*, an diesen Stellen von Tieren auf eine Körnerart übertragen (oder vielleicht umgekehrt *anšu zi-zi* mit solchen Körnern gefütterte Esel?). — *Zú* ist sumerisch besser *zum* zu umschreiben, so auch im semit. O.-N. *Ma-ḫa-ṣum*(*-ki*).

S. 147. Vgl. zu *ǵa-zi-in* babylonisch *ḫaṣînnu* Beil, äthiopisch *ḫaṣîn* Eisen, Schwert und *mâḫṣê* Beil, ferner babylonisch *ḫanzizîtu* Specht (?), Synonym *pilaqqi Ištar* „Beil der Istar" und endlich griechisch *ἀξίνη*. — *ǵa-zi-giš*, lies *ḫa-zi-iz* (semitisch). — Das kollektive *ǵà* (geschr. *ǵi-a*), was bei Dingen den Plural bildete (vgl. besonders die Ideogramme aus der Hammurapi-epoche) im Unterschied von *me* bei Lebewesen (altsum. *-ene*) ist aus *ǵi-a* ebenso zusammengerückt, wie die Pronominalausdrücke *na* aus *ni-a*, *ba* aus *bi-a*. — Warum *ǵab*, was doch nur übelriechen heißt, als Transkription für *nigin* = *paḫâru*? Ein anderes Synonym für Gesamtheit (gleiches Zeichen *gir*, bzw. *kur*) war *kilib*, siehe Del., Sum. Gl., S. 118f., natürlich eine Weiterbildung von *kir* in einer jüngeren Aussprache *kil* (und vgl. auch *illag* aus *killag*?). — Lies *lù-ǵab* (= *giš-ḫap-pu*) statt *galu-giš* 86, 14; als Berufsname ist es natürlich nicht übertragen „Schurke" (HWB. 205), sondern etwa Kloakenreiniger (wörtl. übelriechender Mann, von *lù*, syn. *giš* Mann, und *ǵab* Gestank).

S. 148 füge zu *ǵi* noch „*ǵi-li*, siehe S. 168 *šárgúb*". Del., Sum. Gl. 214 gibt nur *ǵe-li*, doch vgl. *ǵi-li-ba* (d. i. *šár-gúb-ba*) HWB. 324 und (Huber, Personennamen S. 204) *Ká-šár-gúb-bu* und *Dul-šár-gúb-ba*; man wird kaum *ǵilib* Unterwelt und *ǵilib* Gott (erschlossen aus *ḫi-li-bu-u* = *digirû*, vgl. türk. *čeleb* Gott) für die Lesung *ǵi-li* ins Feld führen dürfen. — *ǵum* in *ǵum-ni-ta* 33, 12 und im P.-N. *Ǵum-zi* (Maus? vgl. *ḫumṣiru*) ist scharf zu trennen von dem anders geschriebenen *hum*; zu *ǵum-ni-ta* = nach ihm (nach seinem Tod) vgl. Thureau-Dangin, RA. X, 94, note 1. Die Lesung *ǵum* ist übrigens nicht ganz sicher; das Zeichen stellt ein Ideogramm dar, von welchem *zíg* Backstein das sog. Gunu ist. Vgl. auch noch verschiedene mit *ǵum* zusammengesetzte Ausdrücke in Reisners Tempelurkunden und den O.-N. *Ǵum-ki*. — *ǵuš* bzw. *ruš* heißt ursprünglich rot, daher auch zornig (vgl. *muš-ruššu* der rote Drache der Apocalypse, und das spätlat. *rosso* in Barbarossa). — *Ka* in *ka-na-ni ba-bur* 32, 8 weist auf ursprüngliches *kan*, wozu man auch den Kultort *gi-ka-na* des En-ki (eine Rohrhütte?) Th.-D., Königsinschr. S. 252 und das damit identische *gi-ka* ebenda, S. 188, col. 2, 11 (also *-na* nur Verlängerungssilbe) vergleiche. Die Übersetzung „his demand is paid" (p. 148 und 132) muß noch fraglich bleiben, wenngleich sie dem Zusammenhang nach passen würde; ich möchte eher vorschlagen: (wegen der fehlenden Schafe) wurde nachgeforscht (es folgt: seine Tafel möge er verlangen, *dub-ba-ni aš ǵa-ba-ab-ti*, wo *aš-ti* vielleicht Verlangen tragen bedeutet). — Bei *ka* fehlt der Hinweis auf *ka-uru* 25, 2 (s. schon oben zu p. 140). — *d. kal* (und

vgl. p. 149 *kal-la*) ist der Schutzgeist (auch in den P.-N. *Pi-kol* und *Eš-kol* im A. T.), ägyptisch *k3* (aus *kr*, d. i. *kal*), vgl. Grundr. S. 126, Anm. 5, S. 101 und S. 184, Anm. 2.

S. 149 *kár-du* (so auch Legrain) wohl semitisches Lehnwort (vgl. oben S. 203 *qar-ra-du-um-bi*) und dann nicht *qar-rà*, was *abbuttu* (und vgl. *qar* in *dam-qar* und *sal-aš-qar*) bedeuten würde; das anders geschriebene *gar* einfassen, z. B. Hussey II, 5, 4 *giš-nad urud-gar-ra*, gehört keinesfalls her. — *Ki-azag* reine Stätte, heiliger Ort, dann erst übertragen auf den Himmelsozean, *apsû*. — *še ki-ba*, aus *ki-bi-a*, vgl. *ki-bi-gar-ra* Äquivalent; *ki-ba* = *ḫu-ṣa-bu* HWB. 287 gehört nicht her, da dort *an-ba* (= *ḫa-ṣa-bu*) und *ki-ba* einfach grammatische termini technici sind (oben, unten, um die Formen *fa'âl* und *fu'âl* zu unterscheiden, s. noch S. 221, Anm. 1).

S. 150. Zu *lù kisal-me* vgl. RTC. 93, rev. 9. — Statt *kiš* lies *ug*. Bei *ku* sind die verschiedenen *ku* (*ku*, *túg*, *šù*) nicht genügend auseinander gehalten, z. B. 60, 20 *lù tug*, aber 83, 5 und 86, 3 *lù ku*. Beachte, daß der Gott Nusku (156, 7) mit dem Zeichen *túg* geschrieben wird, also nicht *Nusku*(*-ku*), was ja sonst anzunehmen sehr nahe läge; in der Gegend von Harran (vgl. P. B. A. S. XXI, 285) *Na-aš-ḫu*, *Na-šuḫ*, woraus wohl *Nusku* (vgl. *namiru*, *nimru* Panther zur Vokalangleichung) entlehnt ist (Grundform *Nasuku*?). — *še kù ú-du* 38, 3, kaum in *kù-ú-rá* (= *šukum*) zusammenzuziehen; vgl. *ú-du-lu* 42, 9 (p. 126)? Es fehlt bei *kù* der Hinweis auf 136, 3 *dul-azag kù* (nicht *-ka*, wie p. 74 steht).

S. 151. Zu *kun* in *kun-nim-e-ne* C. T. 3, 5 statt Nies 55, 14 *nim-e-ne* vgl. *kun* vor Kanalnamen (opp. *ka* Mündung, vgl. Witzel, Untersuchungen, S. 10, Anm. 1; anderwärts *ka*, opp. *igi* Quelle, z. B. C. T. 24, 29, 107), also Schwanz = Ende (bzw. Anfang, wenn *ka* als Mündung gleich Ende gefaßt wird); *nim-e-ne* die Leute (oder: die Elamiten?) scheint also hier ein Kanalname zu sein. — Statt *ba-ni-la* lies *ba-zal-la*. In *šit-mal-ma-a-ka* 33, 13 ist *šit-mal* gewiß nicht *lag-gá* zu transkribieren, da *lag* = *kurbannu* Erdklumpen (Jensen und Zimmern, Z. A. XXXI, 121 und Anm.) heißt. Eher *šitim-ma*?

S. 152. Bei *lal* fehlt der Hinweis auf *a-lal* 1, 12. — *suǵur* (?) *gú-lal* vom Nacken herabhängend? (falls hier wirklich *suǵur* Haar vorliegt). In *šu-lal-a bal* 127, 8 gehört *bal* Amtszeit (*palû*) zum folgenden (*Šar-ru-ba-ni*). Füge nach *lil* ein: *lil-la-an* = *še-lugal* (siehe unter letzterem). Bei *limmu* „vier" korrigiere *dû* in *kam* (dort *gud še* IV. *kam-uš*). Bei *lu* fehlt Hinweis auf *Lu-lu-bu* p. 103; beachte auch die verschiedenen Zeichen, REC. 454 *udu* und *lu* Schaf und REC. 456 *dib* nehmen (letzteres auch in REC. 247 *igi* + *dib* = *û*).

S. 153. Vor *Lugal-Sag-da-na-ki* gehört P. N. — *mu-gub lugal*, vgl. Legrain *mutúm*, bzw. *mu-ara* (= *šurubtu*), also hier „apport royal". Vor *luǵ* fehlt *lud* = *dug* Topf (s. schon oben). *Lulim* unmöglich = Kamel, s. oben S. 200. Bei *lum* gehören die Stellen mit dem anders geschriebenen *ǵum* (siehe S. 215) weg.

S. 154. *igi-gar-ma*, lies wohl *šitim-ma* (s. schon oben). *ma-al-tum* semitisch; *ma-al-la-bi* = *ṣandu* hat Jensen längst richtig in *la-al-la-bi* korrigiert, es gehört also nicht her. Zu *ma-nu* fehlt Hinweis auf *Dul-ma-nu* (s. oben S. 214, Anm. 1). Streiche bei *námaǵ* „possibly a name" und siehe oben die Note Deimels. Zu *mal* gehört *mal-e* „ich" 33, 8 (nicht *gà-e*, s. schon oben). *Má-gab-ne-du* 85, 17 auf p. 80 und Anm. 15, p. 133 und p. 154 ist wohl Titel zum P.-N. *Ad-d. Im.* (*Abi-Rammân*) also Steuermann oder ähnlich, und zwar sieht es wie ein Doppeltitel aus, *má-gab*, *ne-du*.

S. 155 fehlt *maš-tab-ba* 91, 360. — Die Heranziehung von *gigri* Sum. Gl., S. 89 (aus reduplziertem *gir*, dem zweiten Element von *maškim*; geschr. *pa-rim*, bzw. *pa-gìr*) ist irreführend, und ebenso die Beiziehung von *in-zar-zar* 41, 16 (ein wie *in-bad-bad* gebildeter P.-N.), da die bei Delitzsch angeführte Variante von *rim*, bzw. *gir*, *kàš*, *im* (REC. 305) nur dem Zeichen *zar* ähnlich sieht, aber in Wirklichkeit davon verschieden ist. *Máš-ga* ein Zicklein, was noch an der Mutter trinkt (von *ga* Milch); vgl. zum Gegen-

satz von *máš* und *máš-gal* auch noch *máš lugud-da* RTC. 261, 5, 11 u. ö. (Zeichen *nigin* mit Verlängerung *da*), dort die Folge *uzu, máš-gal máš-lugud-da.* Dieses *lugud* ist wohl auf *nu-gid* „nicht lang" etymologisch zurückzuführen (vgl. auch *má lugud-da* „Leichtschiff" D. P. 345, 1). *Me-d.-Ka-silim* ist doch n. pr. f., kein Titel, vgl. *Me-d.-Nidaba* bei Huber und zu *me* den Titel *šal-me*; *Ka-Silim* = Mündung des Silim-flusses.

S. 156 *Lugal-me-ne* ist *Lugal-me-lám* zu lesen (ebenso p. 158). Bei *meš* streiche = *šid* (verschiedene Zeichen). *Mi* = *gi(g)* Nacht, siehe 100, 10 *á-gi(g)-ba-a.* Zu *mu-gub* (lies *mu-túm* oder *mu-gir*) s. schon oben.

S. 157 *anšu-mug* wohl = *anšu-šal* Eselin, da *mug* auch vulva heißt (vgl. auch das Parfum *šem* + *šal* und andrerseits *šem* + *bal* = *šemmug*). Bei *mun* Salz fehlt das Zitat 1, 27. Statt *á-erim temen-na* lies *á-ud-te-na* bei Tageskühle (s. schon oben). — Ist *ni ka-lum* nicht Dattelöl bzw. Dattelfett? (*ná* = *ni* Stein könnte höchstens durch *i* Stein, falls aus *ni*, gestützt werden).

S. 158: *e-ne* nur bei lebenden Wesen, also wohl *lud-bil, ìd-bil*; auch *ingar-ne* wird anders zu fassen sein. — *ni* = *ya* gehört erst zur dritten Bedeutung (Öl).

S. 159: *ni-giš* heißt Baumöl; SAI. 3701 steht nicht *giš*, sondern *nigin.* Es fehlt der Hinweis auf *ni ka-lum* 41, 18. Streiche *ni* nach Zahlen, da dort *ba-zal* zu transkribieren ist. *Ning-gim-ma* 1, 17 hat nichts mit *upšašu* Machenschaft, Hexerei zu tun (dies meist *ning-ag-a*), sondern heißt hier Geräte. — *nim-e-ne* Leute (oder Elamiten?), nicht Bienen; die vielen Stellen mit *nim* + O.-N. und Pluralsuffix *-me* weisen fast alle einen osttigridischen O.-N. auf, also doch etwa Elamiten? *Ninnû* 50 wird gewöhnlich als 4 (*nin, lim*) × 10, bzw. als 40 (*nin* aus *nimin*) + 10 erklärt; vielleicht ist es aber nur, wie *Ninua*, eine Weiterbildung von Nin-ib, dessen heilige Zahl ja (gleich der seines Vaters En-lil) 50 war. *Nin-urta* spricht nicht dagegen, da es nur einer der Beinamen Ninibs ist; vgl. auch Grundr. S. 399, Anm. 7 (*nikiptu* = Wohlgeruch des Nin-ib). Zu *nu* „nicht" p. 160f. fehlt *nu-dib* 31, 7 (siehe p. 141). Statt *nun* steht es in *en-nu* 15, 3 (p. 160 nachzutragen) und in *nu-nir.* S. 161 *nun* als mythologischer Begriff Himmelsozean, wie ich längst erschlossen; vgl. als Bestätigung die Varianten *azag-nun-na* und *azag-an-na* und andrerseits die Varianten *nun* und *ab* (letzteres auch Meer, wie *a-ab-ba*). Der Ausdruck *ša(g) uš-nun* bedeutet vielleicht Dattelmark (worauf mich, wenn ich mich recht erinnere, Pater Deimel wies); vgl. auch *uš-an-ka-lum* Reisn. Tempelurk. 115, 3, 8 und möglicherweise auch *ni-nun* Rahm. Das Ideogramm stellt einen Baum vor (vgl. den Himmelsbaum), deshalb braucht aber *Nun-gal* (= *rîbu* Rahab, der untere Teil des Himmelsozeans, und vgl. die *Nun-gal-e-ne*, die 300 oberen Engel, opp. die 600 Anunnaki oder Engel des Abgrunds, die ja auch das Element *nun* enthalten) noch nicht ein ursprünglicher Baumgott gewesen zu sein. *Nunuz* heißt ursprünglich Ei (vgl. z. B. RTC. 229, 3, 2 oder Inv. 1, 1396; dann erst eifarbig und andrerseits auch Sproß, Nachkomme. — Zu *sá* = *di* fehlt der Hinweis auf den P.-N. *A-ba-an-da-di* (s. schon oben).

S. 162. Zu *sag-ning-ga-ra* (so auch Inv. I, 1290) vgl. die Variante Inv. I, 1377 *sag-ning-ra* (*sag-ning-ga* = *reš na-am-ku-ri* BA. VI, 5, 71) und dazu Th.-D., Inv. I, p. 19, note 1 und Legrain, p. 51 „capital"; sonst wird *ning-ga* und die *eme-sal*-Form *mu-un-gar, mu-un-ga* durch *makkuru* (Lehnwort aus *mungar*?) wiedergegeben, woraus *namkuru* erst eine Weiterbildung ist. Uigurisch und mongolisch entsprechen *mungan* (und bloß *mun*) Gold, Silber, und allgemein Kapital. — In der Umschreibung *sag-sīg-gë* wird kaum jemand so schnell *sag-pa-kab-du* (93, 2) erkennen; vgl. dazu schon oben (beim O.-N. *Ni-kab* = *Ni-tug*) und auch Legrain 376, 7 *sag-sīg* dépôt, réserve (= *nakâpu* und *nakmû*).

S. 163. *síl-gab*, besser *síl-dù* entwöhntes Lamm. Zu *sír* = *sud* fehlt Hinweis auf

sud-gán Brachfeld. — Zu *Su-a-ki* Suti-gebiet vgl. auch schon Foertsch 106, 2, 7 *lú su-a-me* Sutäerinnen; statt *zù-qar* lies *sal-aš-qar*.

S. 164. Eine interessante Variante von REC. 208 ist das *suǵur* (besser wohl *munšub* Haarkleid, da von einem Schaf die Rede ist) transkribierte Zeichen; D. P. 46, 1, 3 und 3, 7 und Foertsch 151, 1, 3 hat es wieder eine andere Form (dort der *suḫûru*-Fisch, vgl. auch Amh. 1 passim). — Bei *sum* Zwiebel lies *hâšu* (statt *ḫâsu*) und HWB. 276 (statt 294, wo von der *hašû*-Pflanze, wohl Thymus, die Rede ist). — Zu *pa* = *aklu* ist auf Foertschs Entdeckung des Lautwerts *ugul*, *igil* (CT. XII, 22, 38180, 2) hinzuweisen, wovon *aklu* einfach entlehnt ist (beachte besonders den st. c. *akil*, analog *aplu*, *apil* von sum. *ibil* Erbsohn), also kaum = arab. *wakil* zu vergleichen. — *šabra* (= *pa-al*) hier und ausführlicher noch auf p. 168 s. v. *šabra*, ist wohl chaldäisches Lehnwort, von *šabrû* = *hoberē šamájim* Jes. 47, 13 ασιρόλογος τοῦ οὐρανοῦ Grundr. S. 131; echt babylonisch ist *barû* Magier. — Zu *maškim* (geschr. *pa-rim*) Legrain p. 33, ist noch auf das ganz gleich geschriebene Wort *parim* für Insel, Sandbank (semit. *nabâlu*) aufmerksam zu machen, Reisn. Hymn. 7/10, Z. 132, vgl. C. T. XVIII, 32, 13b *pa-ri-im* = *nabâlu*, wozu man auch BA. III, 538 *na-ba-lum*, Var. BA. III, 530, Col. 2, 20 *pa-ri-im* vergleiche; falls *barim* die Grundform, so wäre alttürkisch *aral* Insel etymologisch damit verwandt und nur eine andere Weiterbildung der gleichen Wurzel (vgl. auch sum. *aral* Totenreich ursprünglich Toteninsel? und *ǵilib* Unterwelt). — Zu *ǵu* Vogel: eigentlich *mušen* Vogel (aus *ǵušen*?, vgl. türk. *quš*) und *pag* Vogelfänger; zum Namen *Ḫu-erim*, bzw. *Ḫu-aibu* s. schon früher.

S. 165. Zwischen *pap* und *pi* ist der Hinweis auf *ē-par-par* 57, 45 einzufügen. — In *Dun-gi-ra* gehört *ra* mit zum Namen (semitisch? dann = *dumqî-raḫiṣ*, vgl. den wohltätigen Einfluß des Wettergottes für die Vegetation?). Ebenso gehört *ra* in *ning-ga-ra* mit zum Wort (s. oben zu p. 162). Zu *rá* (geschr. *du*) als vermeintliche Verlängerungssilbe hätte Nies von seinem Standpunkt aus auch auf p. 142 (101, 15) *sal-aš-qar-rá* verweisen müssen. — In *šu-ǵe-bar-ri* p. 165f. ist *-ri* sicher nur Verlängerungssilbe zu *bar*, nicht = *ri(g)* leave behind (Br. 2581 steht *záqu* wehen! ein *zaqû* „to loose" gibt es nicht). — S. 166: *Ri-muš* ist wahrscheinlich semitisch (eine Bildung wie *Ṣi-lu-uš-d.-Dun-gi* Drehem 5504), also *Talhum-muš* ausgeschlossen. *Rú* und *dú* = *banû* sind wohl nur dialektische Varianten. — Zu *su* „revenu" (Legrain) vgl. noch die Verlängerung *-ga* Legrain 124, 8 und 389, 11 (beidemal nach *lal-ni*), also doch *rug-ga* zu lesen?[1]) wozu HGT. 142, rev. 2, 22 *zu-zu-ma-ab* „füge hinzu" (*ṣi-ip*), dann *rug*, jünger *rùm*, stimmen würde. — *šá* oder *ù* „und" (urspr. „wenn", wozu man türk. *är-sä* wenn er ist vgl.) wird anders geschrieben, als *šá-a-an* (lies *tabar-a-an*), s. schon oben.

S. 167 lies *šà-tam* (der auch später noch bezeugte Titel *šatammu*) statt *ša(g) erim* 100, 23. — Zu *šabra* siehe schon das zu p. 164 Bemerkte; seine Funktionen sind hier, p. 167, übersichtlich zusammengestellt. — Mit *šág* Dattel, süß, dann (wie *ṭâbu*, was urspr. gut riechen, dann erst gut sein bedeutet, opp. *ba'âšu*) erst gnädig, günstig, hat das Del. Sum. Gl. 257 angeführte *ša-a-qa* = *šaqû* Magnat (urspr. Mundschenk?) gewiß nichts zu tun. Dagegen ist interessant, daß das Ideogramm dieses *šaqû* BI-LUL ist, also der aus der assyrischen Kangliste bekannte *rab* (*gal*) BI-LUL, und demnach wohl endgültig der *rab-šaqē* von 2. Kön. 18, 17. Dies *bi-lul* hängt aber wohl ursprünglich mit *billudû* (wie *parṣu* ein Kultgerät und dann erst göttl. Satzung) HWB. 173 zusammen, da die Grund-

[1]) So auch Nies p. 166, während er *su-su-dam* auf p. 163 (180, 8) aufführt, die Lesung dort also offen läßt; zu p. 163 ist noch nachzutragen *su* Fleisch, Haut, nach Del. *kuš*, aber doch auch *su*, wozu man auch noch das Lehnwort *gudasù* Ochsenhaut vergleiche.

form des letzteren in *pi-lul-da* Huss. II, 52 zu suchen ist[1]); eine Lesung *kaš-lul* ist dann, so nahe sie auch wegen *šaqû* läge, natürlich ausgeschlossen, zumal ja *šaqû* auch einfach „der Hohe" bedeuten kann.

S. 168 füge vor *šaǵ* noch *šagub* = *anšu nita* (opp. *eme*) von p. 118 (69, 8 und 71, 12) ein; vgl. Del., Sum. Gl. 151. — *šaǵ* im Gottesnamen *Nin-šaǵ* ist *šubur* zu lesen, was aber kaum Schwein (so nahe die Vergleichung mit dem Eber des Tammuz läge), auch nicht *ardu* (= *subar*) bedeutet[2]), sondern eher Unterwelt (aus *ǵubur*), vgl. S. b 321 *šu-bur*, Var. *su-bur*, Ideogramm *šaǵ*, = *irṣitum*; Langdon, Psalms, p. 160, Z. 8 und Anm. 5 [*umun*]-*šaǵ-ra* (d. i. *šubur-ra*) = *be-el ir-ṣi-tim*, und vgl. zu *ǵubur* Unterwelt Del., Sum. Gl. S. 215 und noch S. 212 *ǵabrud*, *ganburud* Loch (und vielleicht auch *gurud*, id. *nun-dul*, hinwerfen). Das Schwein, das die Erde aufwühlt[3]), war wohl auch für die Babylonier ein Unterweltstier[4]). Das Fem. (Sau) hieß auf sumerisch *megid* (= *šaḫitu*) S. b 71, dessen Ideogramm *dab-ti* ein andres Synonym von *šaǵ* Schwein, nämlich *dab* (daher semit. *dabû*, auch äg. *db*) nebst dem nachgesetzten Wort *ti* Weibchen (türk. *diši*) enthält; vgl. dazu osttürkisch *mikčin* Sau, Mandschu *migan* Ferkel, *mikačan* junger Eber (sum. *megida* vielleicht dementsprechend aus *megi-di*, Syn. *dab-ti* entstanden zu denken, falls nicht *mig* allein schon Sau hieß). — Gott *Šara* von Umma (vgl. auch oben S. 209 Anm. 3), sein Ideogramm (*sig* grün in *nigin*) Legrain 303, 3 (*sig-gi*) aus Versehen (?) statt *sig* (Wolle) *-gi* 347, 2; vgl. dazu *sar* grün, gelbgrün (*arqu*), türkisch *sari* gelb und sumerisch *sig* grün, osttürkisch *saǵir*, tungusisch *singarin* gelb. — Zu *še-lugal* gibt JRAS. 1905, p. 825 (das viersp. Syll. Pinches) die sumerische Aussprache *lil-la-an* = *lil-la-nu* und *še-sag* = *ja-ra-a-aḫ-ḫu*.

S. 169. *Ešǵanna-šeš-e-gar-ra* s. oben S. 210; *šeš* „weinen" wird anders geschrieben. Zu *urin* = *šeš* Bruder vgl. die Bedeutung schützen für *uru(n)*, Zeichen *šeš* und dazu das Zeichen *pap*, *kur*, welches auch *šeš* Bruch (bei Zahlen), *aḫu* Bruder und *naṣâru* schützen bedeutet.

S. 171 fehlt bei *tab* noch 91, 360 *áb maš-tab-ba* (s. schon oben). Vor *tar* füge *tam* (Zeichen *ud*) im Titel *šà-tam* ein. Zu *te* lies *á-ud-te-na* statt *á-erim-te-na* (s. schon früher). Das fragliche Zeichen im Ausdruck 67, 32 *še-dirig* (?) *-tir-ra* sieht wie *suǵ* (gunu von Ninni) aus, doch vgl. die Verbesserung auf p. 194, wonach es eine Ligatur aus gunu von *si* und dem Zeichen *a* (also doch = *si-a* = *dirig*?) wäre. — *túg* „hire", doch vgl. die Schreibung mit *šù*, *zíd* (nicht *túg*, was Kleid bedeutet); Nies lies sich durch *túg-gá* (lies aber *šù-mal*, bzw. *ǵùm-má*) zu dieser Umschreibung verführen.

S. 177 fehlt nach *tuk* das Wort *tukundi-bi* „gesetzt daß" 31, 7 (siehe schon oben und bei Nies p. 159 s. v. *núg*). Zu *túg* lies: *túg-dú-a* und korrigiere 171, 1 in 170, 1. — *La-tu-ra-ku* (97, 22) ist wohl sicher P.-N. — *Pi-at-ra-at* 91, 88 (*Ja-at ra-at*, da *pi* im Auslaut stets, wie ich seinerzeit, O. L. Z. 9 (1906), Sp. 280f. nachgewiesen, *já* zu lesen ist) wäre ein ganz passendes n. pr. f., aber im Text hat Nies ganz deutlich *an* statt *pi*, also etwa *Anu-at-ra-at* (Anu, du bist überragend?).

---

[1]) Auf Hussey II, 52 machte mich Pater Deimel aufmerksam (16. Mai 1917) mit der Bemerkung, daß es ein ledernes Behältnis für Götterbilder sein müsse, worauf ich ihn sofort auf das bislang unerklärte *billudû* hinwies.

[2]) Allerdings ist für *subar* = *šaǵ* nach Del., Sum. Gl. 287 auch *šaḫû* Schwein bezeugt.

[3]) Vgl. auch *dun* in der Erde graben und *šaǵ* (das Zeichen eine Modifikation vom Zeichen *dun*) Schwein, und vgl. türk. *donguz*, jünger *domuz* Schwein. Es gab im Sum. neben *dun* weben (oben S. 214), Herr, graben usw. wohl auch ein Wort *dun* Schwein (das in der Erde wühlende).

[4]) Vgl. auch Alfr. Jeremias, Das alte Test. usw., 3. Aufl., S. 331 (der Eber als Unterweltsmotiv) und noch sein Handb. der altor. Geisteskultur S. 224 (bei den Indern das Avatâra als Eber, der die von den Asuras ins Urmeer versenkte Erde herausholt).

Zur Zeichenliste (p. 173—182) hätte ich noch einiges zu bemerken; da aber dazu eine autographierte Beilage notwendig wäre, so verschiebe ich mir es auf eine andere Gelegenheit.

Dieser ganze Appendix, der mich ein Vierteljahr (von November 1919 bis heute, 21. Februar 1920) angestrengtester Arbeit kostete, sei nicht bloß dem Andenken an Mrs. Nies (siehe oben S. 2), sondern auch an meinen am 8. November 1919 glücklich aus $4\,^1/_2$jähriger französischer Zivilgefangenschaft zurückgekehrten und am 26. Januar 1920 nach nur achttägiger Krankheit (Grippe und Lungenentzündung) den Seinen entrissenen Sohn Friedrich (geb. 19. Dez. 1884) geweiht; er war designierter Pfarrer der evangelischen deutschen Gemeinde in Barcelona, hatte schon als Student bei meinem Schüler Hell Einführung ins Babylonisch-Assyrische gehört und sich in seiner Gefangenschaft bei mitgefangenen Türken eine gute Kenntnis des Arabischen und vor allem der osmanischen Umgangssprache angeeignet, was er später noch in einer Dissertation über alt- und neutürkische Sprichwörter zu verwerten hoffte. Diese Pläne sind nun mit ihm begraben. Mein Appendix einerseits, der mich über so schwere Zeiten (nächst dem Glauben an Gottes Führung) lind hinübergeholfen, und andrerseits unser gemeinsames Leid bilden ein neues festes Band der alten, 1910 geschlossenen Freundschaft zwischen dem Verfasser dieses Buches und mir.

Parallele aus dem Lied der Hanna, 1. Sam. 2, 6 (Jahve ist's, der tötet und lebendig macht, der in die Unterwelt stürzt und wieder emporführt), wie überhaupt das ganze Lied 1. Sam. 2, 1–10 im Aufbau Verwandtschaft mit dem erwähnten Ninib-hymnus zeigt. Vgl. dazu *Bît-Nin-ib* (in T. A) bei Jerusalem!
